LETTER OF TRANSMITTAL.

SACRAMENTO, JULY 1, 1926.

To His Excellency, FRIEND WM. RICHARDSON, Governor,
State Capitol, Sacramento.

SIR: In accordance with section 2335 of chapter six of the Political Code, creating a State Department of Public Welfare, we have the honor of transmitting this, our first biennial report, for the period commencing July 1, 1924, and ending June 30, 1926. We have also included statistical data of the Board of Charities and Corrections for the period commencing July 1, 1922, and ending June 30, 1924.

Respectfully submitted.

HENRY ROBERT BRADEN, *President.*

RUDOLPH I. COFFEE.

MRS. WM. A. FITZGERALD.

SECTION I.

GENERAL INFORMATION.

INTRODUCTION.

In 1903 the legislature of California created a State Board of Charities and Corrections and endowed it with authorization to investigate, examine and make reports upon the charitable, correctional and penal institutions of the state, including the state hospitals for the insane and such public officers as are in any way responsible for the administration of public funds, used for the relief or maintenance of the poor. In 1911 additional responsibilities delegated to the board were the supervision of the placing of dependent children into homes and the supervision of societies engaged in such work. In 1913 an additional law was passed which provided that the board license and inspect institutions, boarding homes and homes for the reception and care of children.

The same year, 1913, saw a bill passed by the legislature which provided for the appointment, under the Board of Control, of three children's agents who were to visit, under the rules of said board, the homes and the institutions in which are children to whom state aid is being given or for whom aid is being asked, to obtain such information as the board may need in carrying out the provisions of this chapter. In 1919 this act was amended so as to increase the number of children's agents available in order to meet the growing and nationwide demand for attention to and supervision of needy children.

The Board of Charities and Corrections in its biennial report of 1916-1918 says:

There is no question among those at all familiar with the matter, that the charitable and correctional work of the state can and ought to be unified and reorganized. The Board of Charities and Corrections is convinced that this can best be accomplished by departmentalizing this work and placing it all under the general supervision and direction of a Board of Public Welfare.

The most glaring need of this forward step of unification appears in the field of the children's work. The law makes the supervision of the care of dependent children one of the chief duties of the Board of Charities and Corrections. Another law, known popularly as the Widows' Pension Law, lays upon the State Board of Control the same duties with reference to many institutions and children already under our board. It has long been felt that the consequent overlapping, with its inevitable irritation to all the workers, should be removed by a consolidation of all the children's work.

The Board of Control had for a long time taken cognizance of this situation as it existed in the state. It was obvious that in a group of at least twelve thousand children receiving state aid and an additional group "asking for aid" there would be numbers of children in boarding homes or institutions requiring the licensing of the State Board of Charities and Corrections. There must consequently be a wasteful overlapping of jurisdiction and authority and a natural impatience and misunderstanding on the part of the public, along with an unnecessary expenditure of funds out of the state treasury.

In March of 1924 by a simple procedure this condition was rectified. The Board of Charities and Corrections saw fit to appoint as its executive officer the chief of the Children's Department of the Board of Control. With the direction of the duties of the two organizations placed in the hands of one executive it became possible to assign to a worker who represented both boards all the activities of a given territory. There was no difference in training or requirements for the fulfilling of these similar duties. The child eligible to state aid was no different from the child requiring boarding home supervision but not in need of a state subsidy. All of these problems could not be disassociated from those larger problems of coordination of social work, of inspection of hospitals and institutions harboring the needy and dependent of the local community.

The work is carried on on a nondepartmentalized basis. An agent going into a community visits all the families and children subject to her supervision. These visits are the foundation for reports on the social institutions of the section.

In accordance with this reorganization of staff the board is no longer divided into subcommittees, dealing with specialized activities but has divided itself into groups functioning on a geographical basis, thus making it possible to meet at stated intervals between the regular monthly sessions. The groups consider complaints, review plans for buildings, hold hearings and counsel the agents in the various offices. They are a court of reference for puzzling questions as they arise.

In a state of the proportions of California where distances from county seat to county seat are great; where the expense of travel into remote districts reaches a goodly figure, and where calls on groups of children in these isolated sections are of the greatest importance, the amalgamation immediately demonstrated its usefulness. Actual computation shows that with no increase in the number of workers, the combined personnel are covering the counties more thoroughly and at a smaller cost than under the former plan of operation.

In 1925 the legislature in conformity with the advances made in other states changed the name of the Board of Charities and Corrections to the State Department of Public Welfare and placed upon it additional duties, responsibilities and range of activities.

This report, the first issued under the revised law, is presented in a new form. It assembles in separate sections all the duties which can be reviewed on a single functional basis:

1. Dependency.
2. Delinquency.
3. Mental disease and deficiency.

It also includes statistical data concerning the biennial period from 1922-1924 which, heretofore, have not been published.

ANALYSIS OF THE ACT OF 1925, CREATING A STATE DEPARTMENT OF PUBLIC WELFARE.

The bill assembles into adjoining code sections the activities of the Board of Charities and Corrections which had theretofore been widely separated. It changes the name of the state's social service depart-

CHART 1.

ORGANIZATION OF STATE SOCIAL WORK IN CALIFORNIA BEFORE MARCH, 1924

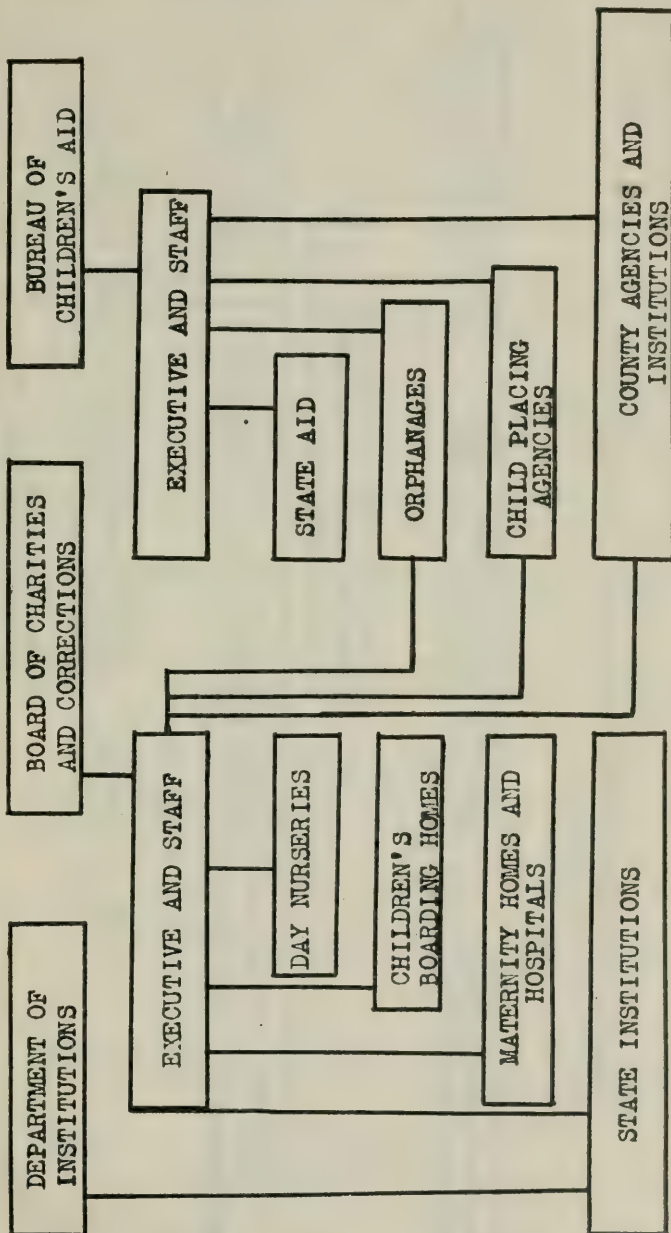

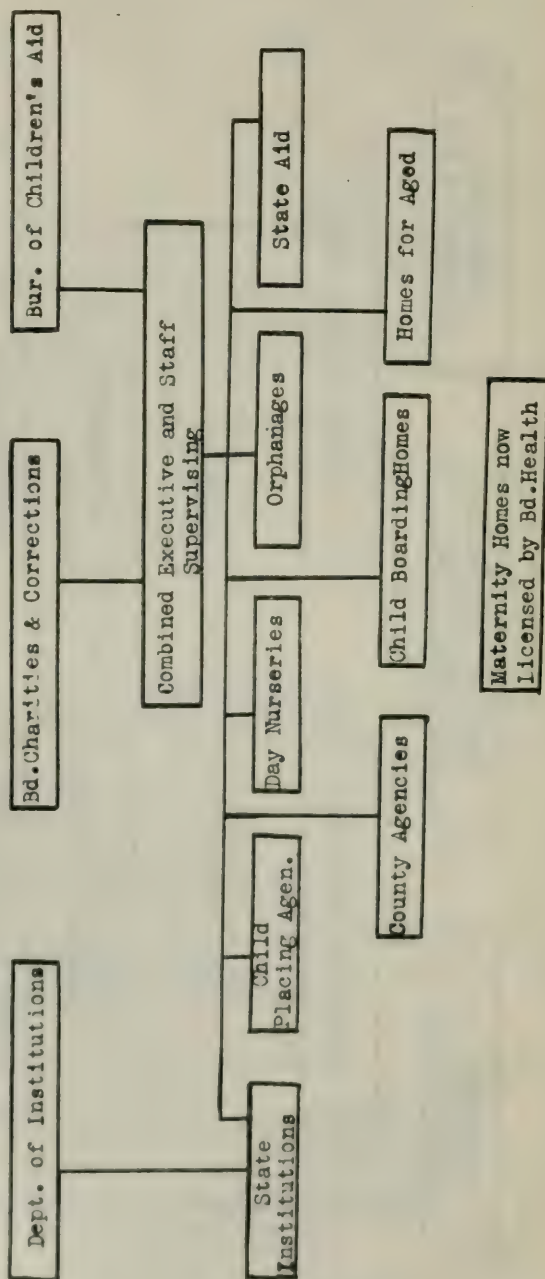

CHART 2.

ORGANIZATION OF SOCIAL WORK IN CALIFORNIA SINCE MARCH 1924

ment from State Board of Charities and Corrections to State Department of Public Welfare.

The bill outlines the general functions of the department as they apply to the charitable, correctional and penal institutions of the state, including state, county and city hospitals for the insane and the investigation of the expenditures of all public funds for the relief of the poor. The department is empowered to devise record forms for all these groups and to demand data from them.

The bill makes it possible to compel the attendance of any person required as a witness in the process of an investigation.

A new provision designates the superior court as the body which may compel the attendance of witnesses.

The bill outlines the duties of the department in the supervision and licensing of institutions and boarding homes for the care of children and adds a new provision for the supervision and licensing of homes for the aged. The age of children over whom supervision is to be had is for the first time raised in the law, from twelve to sixteen. Another new provision authorizes the department to designate as accredited agencies such local organizations engaged in child-caring activities as it may approve.

The bill outlines the duties of these accredited agencies. It makes an important new provision whereby all licenses must be reissued every twelve months.

The bill places upon district attorneys the duty of prosecuting persons caring for children or aged persons who fail to observe the requirements of the Department of Public Welfare.

The bill requires acknowledgment of relinquishment to be filed with the department prior to the commencement of any adoption procedure.

**ACCOUNTANT'S REPORT OF EXPENDITURES FOR PERIOD JULY 1, 1924,
TO JUNE 30, 1926, 76th AND 77th FISCAL YEARS.**

*To the Honorable, THE STATE BOARD OF CONTROL,
Sacramento, California.*

GENTLEMEN: We have completed an audit and examination of the books and records of account of the State Department of Public Welfare for the period from July 1, 1923, to June 30, 1925, and have audited the cash to April 26, 1926. All funds appear to be intact at the latter date.

The State Department of Public Welfare succeeded the Board of Charities and Corrections on July 24, 1925 by virtue of Chapter 18, 1925. Prior to this the Board of Charities and Corrections was reorganized. Mrs. Amy Steinhart Braden assumed her duties as secretary on March 1, 1924. Mrs. Braden continued her work as Chief of the Bureau of Children's Aid of the Department of Finance, receiving her salary therefrom, only her necessary traveling expenses being paid by the Board of Charities and Corrections. Under this plan the work of the two agencies was coordinated, duplications of work were eliminated and considerable financial saving was effected. This financial saving is reflected in an attached schedule which shows that in the biennium ending June 30, 1923, during which both agencies operated independently, the Bureau of Children's Aid expended \$72,527.52 and the Board of Charities and Corrections expended \$79,257.87, while in the following biennium, ending June 30, 1925, during which time the agencies operated under a coordinated plan, the expenditures for the Bureau of Children's Aid were \$54,360.33 and those for the Board of Charities and Corrections were \$45,110.70. The decrease in the expenditures of the Bureau of Children's Aid was

\$18,167.19 and the decrease in the expenditures of the Board of Charities and Corrections was \$34,147.17. The combined expenditures for the biennium ending June 30, 1925, were \$52,314.36 less than the expenditures for the previous biennium.

The financial transactions of the Board of Charities and Corrections, during the seventy-fifth and seventy-sixth fiscal years, and the status of its funds as of June 30, 1925, are set forth in the following statements of account presented herewith:

ACCOUNT I.—Statement of Financial Status as of June 30, 1925.

ACCOUNT II.—Statement of Income and Expenditures for the period July 1, 1923, to June 30, 1925.

ACCOUNT III.—Statement of Analysis of Expenditures for the period July 1, 1923, to June 30, 1925.

Following the above is a schedule showing the comparison between the expenditures of the Board of Charities and Corrections and the Bureau of Children's Aid, Department of Finance, for the period from July 1, 1921, to June 30, 1925.

GENTLEMEN: We have completed an audit and examination of the books and records of account of the State Department of Public Welfare for the period from July 1, 1925, to June 30, 1926, and have audited the cash to June 30, 1926. The books and records of account are accurate, neat, and up to date. All funds were found to be intact.

The expenditures of the period examined exceeded those of the seventy-sixth year, which preceded, by \$1,183.40 as shown by Account II appended hereto. This increase is due mostly because of the increased activities of the agents and additional duties placed upon the department by the legislature in 1925. The departmental statistics show a very large increase in the number of visits made and investigations conducted.

The financial transactions of the Department of Public Welfare during the seventy-seventh fiscal year and the status of its funds as of June 30, 1926, are set forth in the following statements of account presented herewith.

ACCOUNT I.—Statement of Financial Status as of June 30, 1926.

ACCOUNT II.—Statement of Income and Expenditures for the period July 1, 1924, to June 30, 1926.

ACCOUNT II—Schedule 1.—Statement of Analysis of Expenditures for the period July 1, 1924, to June 30, 1926.

 Protestant Episcopal Old Ladies' Home, San Francisco.
 Veterans' Lodge Children's Home, Sawtelle.
 St. Marta's Day Nursery, Los Angeles.

SECTION II.

DEPENDENCY.

A. Adults.

1. Out-door Relief.
2. County Hospitals.

B. Children.

C. Special Problems.

1. The Blind.
2. The Aged.
3. Indians.

A. ADULTS.

The duties of the State Department of Public Welfare which apply to adult dependency extend:

1. To out-door relief.
2. To county hospitals and poor farms.

OUTDOOR RELIEF.

1. Legal provision for the supervision of out-door relief is as follows:

Political Code §2333. The department is hereby authorized and empowered and it shall be its duty as a whole, or by committee, or by its secretary, or other agent, whom it may authorize to *investigate, examine and make reports* upon the *charitable, correctional, and penal institutions of the state*, including the state hospitals for the insane, of the counties, cities and counties, cities, and towns of the state, *and such public officers as are in any way responsible for the administration of public funds used for the relief or maintenance of the poor.* All the persons or officers in charge *of or connected with such public institutions, or with the administration of said funds,* are hereby required to furnish to the board or its committee or secretary such information and statistics as they may request or require, and allow said board, committee, or secretary free access to all departments of such institutions and to all of their records. *In order to secure accuracy, uniformity, and completeness in such statistics and information, the department may prescribe such forms of report and records to be kept by all persons, associations or institutions subject to the provisions of this chapter, other than those public institutions for which a different form has been or may be prescribed by the department of finance, and it shall be the duty of each of such persons, associations or institutions to keep such records and to render such reports in conformity to the forms so prescribed; provided, however, that, so far as the same may be applicable there shall be incorporated in such forms the information and data which is now or may hereafter be required to be contained in the records and reports of the several state hospitals.* All plans of new buildings, or parts of buildings for any of the public institutions coming under the provisions of this section, or any additions or alterations in such buildings, shall, before their adoption by the proper officials, be submitted to the board for suggestions and criticism.

It shall also be the duty of the State Department of Public Welfare to prescribe such forms of records as are provided for in section ten of an act entitled "An act to provide for the maintenance and support, in certain cases, of indigent, incompetent, and incapacitated persons, other than persons adjudged insane and confined within the state hospital, becoming a public charge upon the counties or cities and counties within the State of California, and for the payment thereof

into a fund for the maintenance and support of such persons." Approved March 23, 1901, as amended.

Close and friendly cooperation with county officials must be in effect in order to carry out the provisions of section 2333. This means that representatives of the department must be available at all times for the advice and assistance which they, with their state-wide outlook on social problems, are able to proffer.

The function of the State Department must be not only the actual administration of the law, but the interpretation to local communities of the state's duties and functions as well as the interpretation to the state as a whole of the problems and difficulties of the local community.

In no two communities are relief problems identical, and so to each of them there must be taken an elasticity of judgment, which adapts itself to local needs, having always in mind certain basic hypotheses without which no social service can be effective.

Three of these must be recognized before any progress becomes apparent.

The first is that people properly maintained are an economic asset. They are in a position to avert such dangers of continued dependency as are caused by ill health, delinquency and mental deterioration. Over generosity is quite as dangerous as is a policy of niggardliness. The amount of money expended can not serve as a criterion of effectiveness of results, and so we come to our second requirement: The approach to a solution of the problem on a scientific case work basis, which leads to the third fundamental requirement: the employment by the local agency of persons of training and experience.

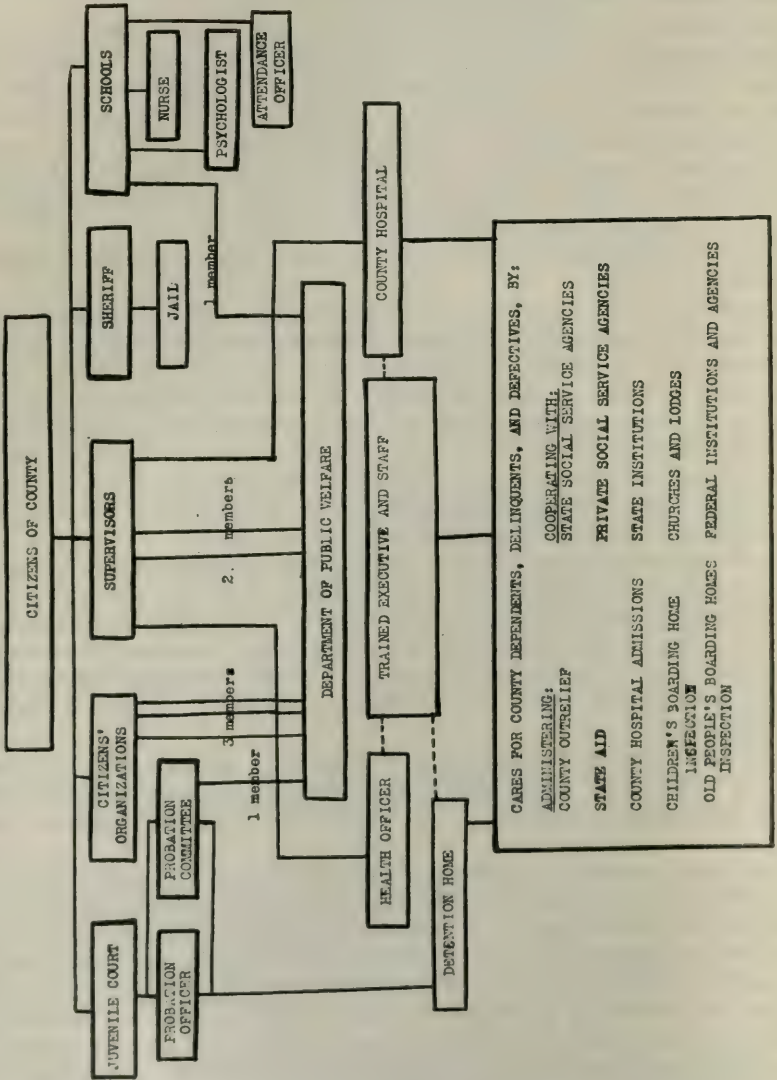

No county can carry out a social welfare program unless a cordial relationship is established among its agencies. For instance, a probation department which functions independently of a health department is not attaining a maximum degree of efficiency; a school department, unconscious of a health department or a probation department, is far from attaining its greatest usefulness, and so it is with a welfare department.

A welfare department can not be isolated in a community. It must exist, if it is to exist successfully, as part of a great humanitarian plan, which includes all of the activities which mean forward looking citizenship.

Intelligent cooperation between the various county agents, supervisors, school superintendents, teachers, physicians, nurses, social service and child welfare experts is of basic importance if families and individuals are to be successfully reconstructed. This is the real function of public welfare. It is not unusual to find in counties certain departments or groups of workers working entirely apart and making no attempt to cooperate with related groups. There is no better method of cementing relationships than by a central commission, which can serve as a clearing house for all problems involving human welfare. Such commissions are operating in fifteen counties, Santa Cruz being the newest one added. Serving without compensation, as they do, they are not a source of expense to these communities. The need for such organizations is more than ever apparent since certain counties have seen fit to abolish the services of their county nurses, who, in their

CHART 4.

SUGGESTED MODEL COUNTY WELFARE ORGANIZATION

districts, were the sole persons charged with supervision of social service.

It is clear that though a person serving as supervisory and administrative agent of out-relief may be an executive of high attainment and training, he, acting alone, can hardly be expected to coordinate and build up a close relationship between the various phases of public welfare. For this purpose a commission is essential, one that shall reflect in its personnel all aspects of human betterment.

Originally when plans for county organizations were proposed, it was taken for granted that only social service activities should be represented, but a more far-reaching program is now being advocated, i. e. that of calling into regular council all agencies in the community whose interest centers on public well being. This would include health, education, dependency, delinquency. Herewith is presented a chart of a welfare commission, showing a model organization, with its sources of membership and its far-reaching contacts.

This chart need only be regarded as a model on which plans adapted to local groups may be made. When a district has a well developed health unit, it might be well to have the medical director serve as a member of the commission, or a combination of the Probation Department and the commission may be effective, or again the hospital commission may wish to merge itself into a social service commission, since admission to the county hospital might be through the social welfare department.

The commission must always be representative of all the interests of its community. In the small county, which is limited in the funds available for an adequate staff, it can supplement the work of the trained worker, exercising such friendly supervision as carries a problem to a happy solution. In the large county it must serve as a court of resort in the clarifying of difficulties and as a means of interpreting to the public its purposes and the meaning of its activities.

The commissions now in operation reflect to a great degree the ability and training of their executives, who after all are their keynote. On them falls the duty of moulding policies and of making social work a constructive element in the advancement of their communities.

The political unit, known as the county, has certain clearly defined responsibilities. They include the care of the adult indigent and the child who does not come within the province of the children's state aid act. For the latter it serves as the dispenser of funds, subject to standards set by the state. Where the local unit serves as the state's representative, there is a uniformity of record-keeping. In their other activities, however, uniformity of records has not been attained.

The board has been attempting to simplify all forms and questionnaires so that data may be presented that are essential and not difficult of interpretation, both for the county official and the state board. Inasmuch as record-keeping is largely in the hands of the county auditors, there must be constant consultation between them and the social agencies in order to assure the accuracy of detail which is so essential to an understanding and bettering of social conditions.

In certain counties the actual administration of out-relief is assigned to the auditor with a check by the board of supervisors. This is because

CHART 5.
ADMINISTRATION OF COUNTY OUTRELIEF, 1924.

of the lack of some other person to handle it. The various methods in effect in the state, are shown in charts 5 and 6.

During the biennium a continued effort has been made to visit every county. Existing agencies have been strengthened and plans for organization projected. Surveys have been made in Fresno, Contra Costa, Santa Clara, Monterey and San Diego, while complete studies of children's work have been carried on in all the smaller counties, and cross sections in the larger counties. The combination of the two state departments has made possible this extensive program.

The work for children is of a far higher order than that for the adult indigent. There is a greater waste and misapplication of funds for the latter, and where assistance is needed it is often insufficient. The problem is seldom approached as one of rehabilitation of the individual, and so cases continue hopelessly for years. The effect is demoralizing to the recipient of relief and discouraging to the community. It leads ultimately to a lowering of the general tone of relief, a condition which is averted in counties in which an adequate investigative group is employed.

Counties are inclined to show a certain impatience at increasing expenditures. These, if analyzed, might have been reduced by a case work approach. They complain of the increasing requests for relief from among their citizens, of the arrival of dependents from other states, and from foreign countries. The time has come when counties must have a uniform standard of treatment for new comers and an agreement with other sections in regard to the assumption of responsibility and the transfer of needy families. The department has in numerous instances been asked to serve as arbitrator in disputes between local units, but a determination of residence, dependent as it is on uncertain conditions, is filled with complexities. The department feels that public officials must reach a mutually satisfactory conclusion and have it serve as a basis for all adjustments.

In fact there must be a far closer relationship between public officials and social service workers. Frequent conferences alone can bring this about. The social worker, as a student of the problems of poverty and of methods of relief, must interpret them to the group who have it in their power to allot funds. The line of demarcation between these two groups is too marked. The State Department of Public Welfare must stand at the forefront, ready to foster progressive policies, to interpret the meaning and necessity for advances and to justify them.

The economic value of social work must be recognized if it is to be maintained at a high standard. For this, as well as for the recognition of the purely humanitarian value, there is a definite responsibility placed upon the State Department, upon county organizations and upon the individual social worker.

The State Department has been well represented at the sessions of the California Conference of Social Work, for it is felt that here is one of the means of making known the aims of California in social service. It remains only to enlist the interest to a wider extent of the money-appropriating groups in that conference to have it attain its largest measure of usefulness.

The progress of social welfare in California in the last decade, has been along steady, progressive and practical lines. As the state conference had for the basis of its last session a ten-year program in the future, the State Department has thought it well to review to a certain extent the accomplishments of the past ten years along social welfare lines. They have included far-reaching amendments to the orphan aid laws, the creation of a bureau of child hygiene, an increase in the minimum wage for women, the establishment of a new institution for mental defectives, the assignment to the State Department of Public Welfare of the duty of supervising homes for the aged, the enacting of a compulsory system of part time education for children between sixteen and eighteen, the paid employment of convicts on highways, the enactment of a system of county pensions for the blind, the establishment of a system of vocational rehabilitation, many amendments to the dairy law, which insure pure milk, a bill calling for the licensing of midwives, numerous minor changes in the juvenile court laws and laws governing the conduct of the three state schools for juvenile delinquents, and in the adoption laws.

RECOMMENDATIONS.

The board has the following recommendations for the betterment of laws affecting adult dependents:

- (1) A clarifying of the provisions of the pauper act, which requires the giving of assistance to dependents newly arrived in counties.
- (2) A greater unifying and simplifying of records according to the standards set by the state.
- (3) The appointment of a trained person in each county to take charge of the county's social welfare activities.
- (4) The appointment of a county commission to act as advisor to welfare workers and to represent the public in the administration of relief funds.

COUNTY HOSPITALS AND POOR FARMS.

LAW AFFECTING COUNTY HOSPITALS.

Political Code §2333. The department is hereby authorized and empowered and it shall be its duty as a whole, or by committee, or by its secretary, or other agent, whom it may authorize to investigate, examine, and make reports upon the *charitable*, *correctional*, and *penal institutions of the state*, including the state hospitals for the insane, of the counties, cities and counties, cities, and towns of the state, and such public officers as are in any way responsible for the administration of public funds used for the relief or maintenance of the poor. All the persons or officers in charge of or connected with such public institutions, or with the administration of said funds, are hereby required to furnish to the board or its committee or secretary such information and statistics as they may request or require, and allow said board, committee, or secretary free access to all departments of such institutions and to all of their records. In order to secure accuracy, uniformity, and completeness in such statistics and information, the department may prescribe such forms of reports and records to be kept by all persons, associations or institutions subject to the provisions of this chapter, other than those public institutions for which a different form has been or may be prescribed by the department of finance, and it shall be the duty of each of such persons, associations or institutions to keep such records and to render such reports in conformity to the forms so prescribed; *provided, however*, that, so far as the same may be applicable there shall be incorporated in such forms the information and data which is now or may hereafter be required to be contained in the records and reports of the several state hospitals. *All plans of new buildings, or parts of buildings for any of the public institutions coming under the provision of this section, or any additions or alterations in such buildings, shall, before their adoption by the proper officials, be submitted to the board for suggestions and criticism.*

CHANGES IN COUNTY HOSPITALS.

The section, as it applies to county hospitals, has remained unchanged since the establishment of the Board of Charities and Corrections. The first report of the secretary, written in 1904, tells of his visit to each existing county hospital, and gives a brief but illuminating description of buildings, their condition and equipment. This record makes an interesting basis for comparison of hospital facilities in 1904 and those as they are now in 1926, exactly twenty-two years later. Many recommendations made in the earlier period, are still unfulfilled; in other instances enormous forward strides have been made. The progress of medicine in these two decades has been great; the best of our county hospitals include the finest facilities for human care. The poor ones of the present day repeat the story of 1904 to a discouraging degree. The description of location of these buildings paints a picture of growth in population and progress as no statistical figures could. For instance, the Sacramento Hospital is described as "about three miles east of the Capitol—with a farm of sixty acres, well stocked with cows, hogs and poultry and about ten acres are devoted to garden." This is the same site which is in use at the present time. The present report would describe it as occupying ground in the midst of a high type residence section—at no great distance from the State Capitol.

Orange County has the following notation: "The county has no hospital or almshouse. An old dwelling in town is rented of a man who would be a pauper were it not for the rent. He and two other men are quartered there. The town gives those two an allowance to live on, one getting his meals outside, the other cooking his own in the house. There is in the town a private hospital and the sick poor are provided for there. Many who would be in an almshouse are given a monthly allowance." There is no further mention of the institution until we see in the report of 1913 "capacity 57." "New building is concrete, old building frame." The report of 1914-1916 reads: "One of the most satisfactory plants is in Orange County."

In 1926 we have the following: "The hospital situation has been greatly improved in the last three or four years. A well-established clinic is in operation, is used by all of the physicians in Orange County. The orthopedic work, formerly done in Los Angeles hospitals, is now cared for in their own county, two specialists in orthopedic work holding clinics twice monthly.

There is a full time health unit, which is composed of a physician and fifteen public health nurses.

They have a social service worker in the county hospital and the boarding home work is entirely under the Health Department.

New building plans are in operation for extending the hospital work and clinical care."

RECOMMENDATIONS.

The recommendations of the pioneering days appear prophetic in their farsightedness. The report of 1908 summarizes the suggestions of previous ones in the following: "An ideal county hospital should provide:

1. A residence for the superintendent separate and apart from the quarters of the inmates.
2. Separate quarters for both sick and surgical cases. The ward system may be partly used, but there should be single rooms for such cases as may require isolation.
3. A certain number of comfortable private rooms for patients who can afford to pay a limited sum for such care. In all of our larger counties there are private patients who need hospital treatment who can afford to pay a small sum of from \$5 to \$10 a week, but who are not able to pay the larger sums demanded by private hospitals. This class should be provided for in the county hospital and receive special care.
4. Good accommodations for the paralytic and permanently disabled.
5. Separate and isolated quarters for both the consumptive and those afflicted with contagious diseases.
6. Suitable rooms for the custodial cases—the old people who are able to get around and partly help themselves. These may be in the main building or in detached buildings. Those who are able should be required to perform some labor. This must be graded in accordance with their ability. It would be better for them, and they owe it to the county. The keeping of such people in idleness is an injury.
7. For the perfect separation of the sexes, especially of the custodial cases. The arrangement should be such that no scandal can arise.
8. Suitable rooms for the employees. These should, for the most part, be in the administration or residential portion of the building."

Had all of these been carried out, many of the hospitals of the present day might not be confronted with such serious problems as they are now facing. They can be repeated as worthy of consideration today with the addition of such facilities as modern science has brought to light.

We should add as recommendations:

9. That a medical superintendent be actively in charge of each hospital.
10. That adequate trained nursing service be furnished.
11. That each hospital make provision for maternity care in quarters separate from those of other patients.
12. That there be ample provision for the care and custody of mental cases.
13. That there be provision in every hospital for the segregated care of children in need of medical and surgical service.
14. That occupational therapy be provided.
15. That the social service work in smaller counties be so organized as to function in behalf of the hospital; that in larger counties the hospital employ trained social service workers, who shall cooperate with existing agencies.
16. That constant vigilance be exercised in regard to fire hazard.
17. That standard records be kept, both for the hospital and as a basis for statistics and research.

The department feels that to carry out these purposes, a semi-annual meeting of hospital superintendents should be called by the State Board, where hospital problems shall be discussed and where experts on hospital administration and care of patients shall be called into conference.

Six counties have institutions used solely as hospitals.

Eleven counties have separate poor farms.

Forty-six counties have joint hospitals and poor farms.

Two counties have no hospitals.

ALAMEDA COUNTY HOSPITAL.

Since the last report was issued by this department Alameda County Hospital and Poor Farm has made such noticeable strides that it is coming to be regarded as a model. So many inquiries are received that it is thought well to describe it in detail.

At the time of writing of this report hospital and custodial cases are maintained in the same institution, but the building of a new hospital separated from the relief home is well under way.

The farm has a dairy which supplies all the milk used in the county hospital.

The poultry ranch supplies eggs, and the hog ranch produces all pork, ham and bacon needed for the county hospital. These departments are now being developed to supply Arroyo Sanatorium and Highland Hospital, and this service can easily be extended to all the county's institutions, when the infirmary population increases.

A cost-accounting system, charging all expenditures, including interest on investments, depreciation, etc., is kept for the farm. The farmer is advised in advance of quantities of farm products needed by the institution, and is allowed the current wholesale price. He must run a paying business.

The dairy is ideally located, with modern equipment. Much produce is raised.

There is a mattress shop, where all mattresses used by the institution and Arroyo Sanatorium are made and renovated by inmates.

The shoe and tailor shops, conducted entirely by inmates, take care of all clothing and shoe repair work.

The blacksmith, tin and machine shops meet the need for mechanical work and repair equipment.

The carpenter, plumbing and paint shops, each under the direction or one outside employee, and manned by inmate helpers, keep up the maintenance and repair work of equipment and buildings.

The power and refrigerating plants are operated by inmates, working under the direction of a chief engineer, with one assistant.

A splendidly equipped laundry, manned by inmates, under direction of one head laundryman, does all the institution work, amounting to over 35,000 pieces a week.

To meet the needs of the group of the totally handicapped or the advanced cases of tuberculosis, there is operated what is known as a Community Shop. This is under the direction of a trained occupational therapy teacher. The aim is to provide an interest through occupation, by teaching the patients basketry, weaving, matting, beadwork, and such things as they can do without much physical effort. The funds for starting this work were derived from the small profits earned by the Cooperative Canteen. The articles made are sold, one-half of the sale price given to the inmate for his work, and the other half pays for the material and time of the instructor.

The tubercular patients are taught basketry, matting and reed work. The women inmates are given various kinds of handiwork, i. e. knitting, crocheting, tatting, embroidery, etc., and the old men are taught to repair chairs, do reed work, etc.

The work is done in wards and in workshops. Only articles that have a ready sale, such as flower baskets, wood baskets, waste baskets, ferneries, magazine stands, embroidered luncheon sets of all kinds, towels, etc., are made. Tin cans from the kitchen are being used for containers for the baskets, and boxes for basket bases.

The interest taken and quality of work are evidenced by the increase in sales from \$15 the first month to \$355 a month.

The response of the patients and inmates has been even finer than hoped for; their cooperation has been very general. The attitude of some patients and inmates has been changed from one of complaint and dissatisfaction to that of happiness and enthusiasm.

A cooperative canteen, handling tobacco, candies, ice cream and soft drinks is maintained by inmates under the direction of the steward.

The extensive grounds of the institution have been developed, the lawns planted with trees, shrubs and flowers, and changed from a very unattractive to a pleasant and cheerful place.

All this work is done by inmates, under the direction of one head gardener. There is also a large greenhouse, where plants and flowers are raised for use in and about the hospital, and trees and shrubs are grown for the grounds of all the county institutions.

To make the inmates as happy as possible, and to develop an esprit de corps, the management has been making every effort to minimize the institutional aspect of the hospital, and to develop a more normal community life.

The patients sleep in dormitories, but during the day most of their time is spent out-of-doors. During the evenings and in bad weather they have a pleasant library and living rooms in which to congregate.

The meal hours are practically the same as those of the employees, and menus are varied as much as possible.

Recreation is provided by weekly moving pictures and other entertainments and religious services; current magazines and other reading matter, radio and phonograph are provided.

When an inmate becomes ill, he is immediately transferred to the main hospital, if suffering from an acute condition. If it is a chronic condition he is sent to the infirmary hospital, where he is cared for by the visiting staff and internes.

The hospital is arranged so as to facilitate giving proper care at a minimum expense. It is arranged with small wards and rooms, so that terminal cases do not die in the presence of other patients. Emphasis is placed upon helping chronic patients to get out in wheel chairs and to provide a pleasant place for them.

Alameda County has no potter's field, but arranges for burial of all unclaimed dead at regular cemeteries at a nominal fee, caskets being manufactured, graves opened, etc., by inmates.

Patients treated in the main hospital, who become convalescent, but have no home to which to go, are transferred to these wards where their recovery is hastened by being among other convalescing patients who are recovering and being discharged.

Another important service given these patients—occupational therapy through employment—is prescribed by the doctor for such a period and of such a nature as the patient is able to do, this being increased until at time of discharge the patient is able to go out and earn a living.

It is the aim of the management to provide for the sick poor, handicapped and indigent aged, a home with pleasant surroundings, proper quarters, food and care; an interest in life and means of earning their maintenance through employment, thus reducing to a minimum the necessary expenditure of public funds; and a hospital or infirmary where they may be given necessary physical and medical care at proper cost.

Although the policy developed for the Alameda County Hospital may seem extensive, any or all parts of it are applicable to neighboring counties which may plan to separate acute and custodial cases and introduce modern hospital service and industrial therapy.

It is expected that by September 1, 1926, Highland Hospital in the city of Oakland will be completed. This institution will provide for all acute medical and surgical cases; also those of children that heretofore

have been cared for in the Baby Hospital, at the expense of the county. It is modern in all its equipment and plans have been made to extend every type of service to the needy residents of Alameda County.

LOS ANGELES COUNTY HOSPITAL AND POOR FARM.

Los Angeles County has two types of wards in separate institutions, both of which have attained a high degree of efficiency and are serving a growing community and its many complex problems. The county farm cultivates an extensive tract, using its inmates as laborers.

The department for psychopathic cases is in splendid condition, and provides care for many cases that might otherwise have been committed to state institutions. Hospital service for the farm is being constantly improved and amplified. The excellent liaison between the county hospital and the poor farm is exemplary; each institution assumes its responsibilities with an understanding of the entire problem and a desire to serve its community in the broadest way. This is especially true in the development of medical and psychopathic care at the farm.

SAN FRANCISCO COUNTY HOSPITAL AND POOR FARM.

San Francisco in its completely separated hospital and poor farm exemplifies a scientific approach to its problems. The almshouse, admirably situated within the city limits but on property which is sufficiently extensive to permit ample space for buildings for raising produce, has recently added a new building to its equipment.

The County Hospital located within the city bears the stamp of thoughtful study in the equipment and arrangement of its extensive plant. The hospital compares favorably with the best type of modern institution, and reflects credit on those who so expertly administer it and under whose direction it has grown from a small institution to its present fine proportions.

COMMUNITY HOSPITALS.

San Mateo and Siskiyou have constructed at county expense community hospitals in which indigent cases are accepted but which may also admit patients who are able to pay fees of varying amounts. This appears an ideal plan for small communities in so far as the difficulties of securing medical service would otherwise be prohibitive.

In San Mateo County the poor farm is in no way connected with the hospital but in Siskiyou a common kitchen is still in operation. The department has worked in close touch with Siskiyou while the building of this plant was in progress and in the establishing of records after the completion of the structure.

Nevada County Hospital was completed in 1925. The department has watched the progress of the construction of this hospital with great interest and kept in touch with the architects and the board of supervisors.

In Monterey County a survey by the Department of Public Welfare of the needs of the community resulted in the building of a fine hospital which is in marked contrast with the former institution.

San Luis Obispo has in process of construction a county institution admirably located, where the department was able to give advice and advance the hospital's cause in the community.

Solano County's Hospital was completed before the present bien-nium. Valuable additions have been made to its plant and the arrangement shows many desirable features.

The reconstruction of the Santa Barbara Hospital was greatly assisted by a survey made by the department and at the present time it is well equipped to meet the community's problems.

San Diego has recently completed an institution for aged dependents, which embodies all modern equipment and facilities. At the suggestion of the State Department, a trained nurse was added to the staff, so that the health of the inmates might be adequately safeguarded.

Whereas it is true that in all these institutions the state's function is only one of recommendation and supervision, frequent visiting and conference have led to notable improvements. There remain, however, a number of the insanitary and hazardous types of former days. Discouraging as this may seem, Harry C. Evans, in his publication "The American Poor Farm and Its Inmates," attributes the higher grade of care in this state, as compared with other states, to the fact that a state department has powers of supervision and examination of records. In only one state—Michigan—does a state department have authority to enforce its recommendations.

The department feels that much is gained for the hospital and the farm where they are separated. Each then has a tendency to attain a higher level. Where they are combined, the county hospital seeks the level of the custodial institution, and its medical equipment is of a primitive character.

A study published by the United States Bureau of Labor in 1925, gives an illuminating description of the statistical, social and financial aspects of poor farms. It has gathered data on forty-two such homes, in California, having 5810 inmates. Their average yearly maintenance is estimated at \$415 with an investment of \$11.45 per inmate.

TABLE 17.
POPULATION OF COUNTY HOSPITALS 1905-1926.

Year	Received during year	Total patients for year	Discharged during year	In hospital June 30
1905.....	14,448	18,578	14,102	4,476

STATE OF CALIFORNIA

DEPARTMENT OF PUBLIC WELFARE

ANNUAL FINANCIAL REPORT OF-----COUNTY HOSPITAL

For Year Ending June 30, 1926

EXPENDITURES

Care and subsistence-----	\$-----
Food, supplies, tobacco-----	\$-----
Clothing and bedding-----	\$-----
Medicines-----	\$-----
Maintenance and operation of plant (water, rent, light, heat, equip- ment, etc.)-----	-----
Administration and general (salaries, wages, postage, express, travel- ing, stationery, etc.)-----	-----
Farm expenses-----	-----
Additions, improvements and repairs-----	-----
Miscellaneous-----	-----
Total expenditures for year-----	\$-----

RECEIPTS

By appropriation from supervisors-----	\$-----
Payment from patients-----	-----
Sale of farm products, etc-----	-----
Otherwise-----	-----
Total receipts for year-----	\$-----
*Daily per capita cost of maintenance-----	\$-----
†Actual cost to the county for the year's operation-----	\$-----

Signed-----

Title-----

* Per capita cost is figured by dividing total expenditures by total individual days of care.

† Total expenditures—Less receipts other than appropriations from supervisors.

Chapter 18, Statutes 1925, obliges this Board to collect reports from state, county and city institutions, and provides a penalty for failure on the part of any public official to furnish the desired information or statistics.

STATE OF CALIFORNIA

DEPARTMENT OF PUBLIC WELFARE

ANNUAL SOCIAL REPORT OF-----COUNTY HOSPITAL

For the Year Ending June 30, 1926

	MEN	WOMEN	CHILDREN	TOTAL
Capacity of institution				
Number of patients on July 1, 1925				
Number of patients received during year				
Total patients cared for during year				
Number of patients discharged during year				
Number of patients on June 30, 1926				
Number of insane patients				
Number of hospital * patients (except tuber- culosis)				
Number of tuberculosis patients				
Number of patients treated by outpatient department				
Number of custodial patients				

The number of patients on July 1, 1925, plus the number of patients received during year should equal the total patients cared for during year, from which number the number of patients discharged during year is subtracted to give the number of patients on June 30, 1926.

Average daily population-----
 Number of day's care given----- (Multiply average daily population by 365)
 Number born in hospital-----
 Number died in hospital-----
 Number of employees, including nurses, on regular staff-----
 Number of trained nurses on regular staff-----
 Number of hospital * pay patients-----
 Number of free patients-----
 Number of juveniles maintained for other than medical care†-----
 Number for medical care-----
 Number of custodial cases who are blind†-----
 Epileptic†-----; cripple†-----; tuberculosis†-----
 Deaf†-----; feeble-minded†-----; Senile†-----; paralytic†-----

* NOTE.—Hospital cases mean those who are in hospital for treatment for illness or injury and are temporary patients only. Custodial cases are indigents who make the hospital their home.

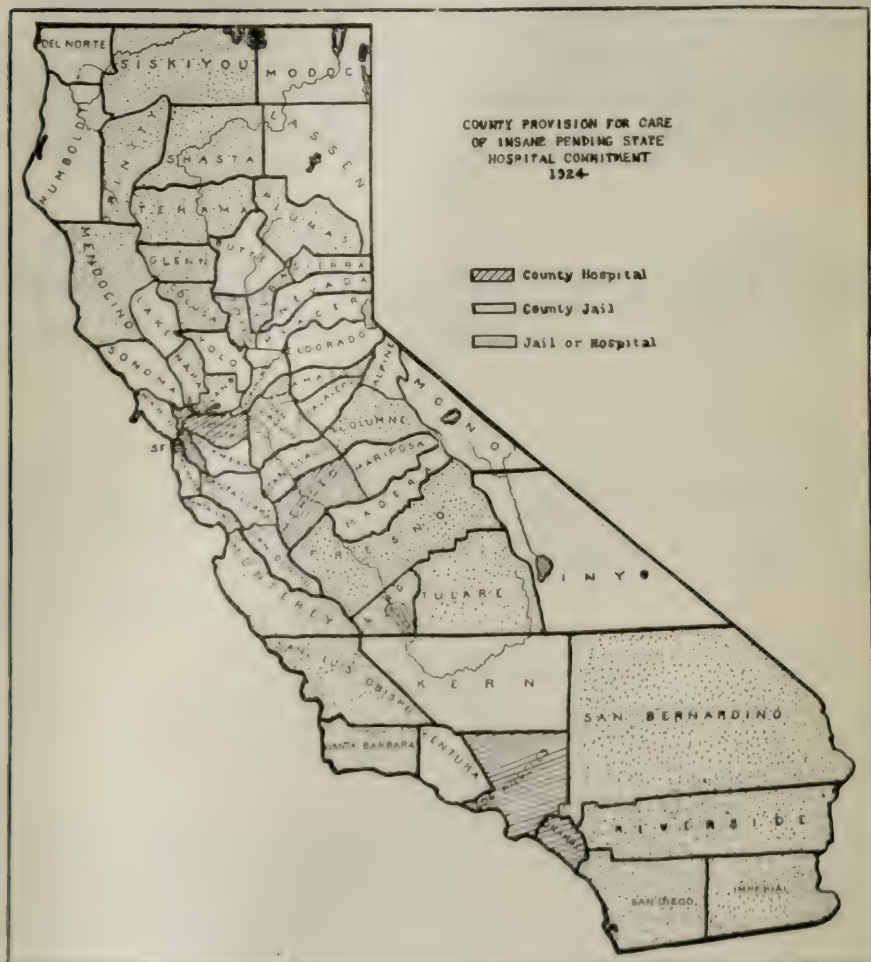

† Include total for the year, if possible; otherwise include only the population of June 30, 1926, but specify which is included.

Signed-----

 Title

Since June 30, 1926, closes the biennial period for state business, we shall greatly appreciate it if you will return your report as soon as possible, thus enabling us to publish our reports for this period at an early date.

CHART 8.

B. CHILDREN.

The State of California wrote into the constitution of 1879 a pledge to safeguard children. For purposes of practical legislative procedure this location of a child caring law may be unwieldy but as a keynote on which to build a state program it has a challenge which resounds and must be answered and carried on.

The state's attitude must be one of protection and standard bearing. It must pave the way for smaller communities to follow. It can not attempt a complete schedule of administration, but it shall and does take over some such duties and includes many others of an advisory and supervisory nature. One duty of greatest importance is to stimulate and organize local activities to their highest point of proficiency. The state can delegate the actual visitation and approval of boarding homes to subsidiary health and welfare departments, but it can not forego its responsibility of maintaining a close check on the policies and achievements of the latter. Child care is developing into an exact science. The needs of a family are no longer determined on an estimate based on sentiment, they are reduced to a scientific budgetary basis which includes provision for every aspect of family care.

A children's institution, in launching its work, must prove itself a necessity and not be founded as an expression of the philanthropic but uncomprehending outlook of an uninformed group. A nursery must show by actual studies of its district that mothers are seeking employment because there is no alternative open to them and no better plan for the care of their children than day care on a community basis.

The child of the day is not carelessly placed in the first foster home available, but his protection is carefully studied from every angle. Can he remain with his own parents? If not, why not? If he is placed what is his mental, social and physical background? Where is the best foster mother who can cope with him? Is he a normal or a problem child?

No field of child welfare is isolated. Whether it be in the matter of health, of education, of mental hygiene, or of relief, there must be the closest interrelation with all other factors and agents. All are of equal importance if a successful state's program is to function.

COORDINATION OF DEPARTMENTS.

The combining of the personnel of the two state social welfare departments has worked notably for the betterment of children. Even in the brief existence of the new arrangement, the efficiency of the reorganization has made itself obvious. A saving in time, a decrease in mileage are of small importance as compared to the benefit to children. Many additional boarding homes have been licensed, numerous applications pending for a long period have been cleared. State aided children have been found in boarding homes—unlicensed at times. A visit from our agent has been sufficient to determine eligibility to state funds and to pass on the qualifications of the home as a foster home. The dual responsibility toward orphanages has been entirely met in a single visit. Many interesting case histories of individual children have been completed through a check in the files of both state offices and many counties which had not been visited by the Board of Charities and Cor-

rections because of sparseness of population and a comparative lack of social problems were visited in the interest of state aided children and, with very little extra expense, time was spent there in the interests of the work of the State Department of Public Welfare.

Data Regarding Care of Certain Children in California.

State.

1. Board of Control, Bureau of Children's Aid.
Expended during the biennium ending June 30, 1926, \$2,985,000 for care of over 14,000 children.
2. Department of Public Welfare.
 - A. *Supervises:*
 - 721 children in county hospitals.
 - 463 children in county detention homes.
 - 1,066 children in 3 state training schools.
 - B. *Licenses:*
 - 3,739 boarding homes for 7,478 children as follows:
 - 837 homes for 1,674 children through nine licensed child placing agencies.
 - 2,222 homes for 4,444 children through licensed boards of health and county welfare departments.
 - 680 homes for 1,360 children by direct license.
 - 29 day nurseries with an average daily attendance of 1,500.
 - 9 homes for 200 convalescent and crippled children.
 - 11 preventoria for undernourished children.
 - 10 rescue homes for 435 mothers and babies.
 - 10 homes for 200 defective children.
 - 56 orphanages for 3,994 dependents.
 - 10 orphanages for 1,400 dependents and delinquents.
 - 6 training schools for 583 delinquents.
 - 9 child placing agencies supervising 5,027 children.
3. Department of Institutions.
Supervises three state training schools for 1,066 children.

Counties.

1. Expended \$573,687 for supplemental state aid to children.
2. Cared for 14,230 children in county hospitals.
3. Expended over \$2,000,000 for children cared for in their own homes.

The duties of the State Department of Public Welfare in behalf of children, are found in the following sections of the Political Code:

§2337. No person, association or corporation shall hereafter maintain or conduct in any city, county, or city and county, any institution, boarding house or other place for the reception and care of aged or infirm persons nor engage in the finding of homes for children under sixteen years of age, nor place any child under sixteen years of age in any home, without first obtaining a license or permit therefor in writing from the state department of public welfare or from an inspection service approved or accredited by such state department of public welfare.

For the purpose of this chapter the term "approved and accredited inspection service" shall be construed to mean the health department of a county or group of counties, city or group of cities, or city and county maintaining a qualified public health service which shall include at least one regularly licensed physician or a qualified social service inspection force which inspection service has been approved in writing by the state department of public welfare of the State of California.

§2338. The state department of public welfare and all approved and accredited inspection services are hereby authorized to issue permits or licenses to persons, associations or corporations to conduct institutions, boarding homes, or other places for the reception and care of aged and infirm persons or to engage in the finding of homes for children or placing children in homes, and to prescribe the conditions upon which such permits or licenses shall be granted and such rules and regulations as may be deemed best for the government of such institutions, and said inspection service or department is further empowered by one or more of its members, secretary or duly authorized representative, to inspect and report upon conditions prevailing in all such institutions, homes or places.

§2339. A permit or license issued by the state department of public welfare or by an approved or accredited inspection service shall expire twelve months from date of issuance of license, and application for renewal of a permit or license must be filed ten days prior to its expiration each year, otherwise it shall stand as automatically cancelled.

§2340. Permits or licenses may be revoked for cause after a hearing before the state department of public welfare or an approved and accredited inspection service, after written notice of the time and place of such hearing and the charges made, against the holder of the permit or license has been duly served on him, not less than ten days prior to the time fixed for such hearing.

§2341. No license may be transferred in any case, without the consent of the department, and no change of location of any institution, boarding house or other place for the reception and care of aged or infirm persons may be made without permission from the state department of public welfare or a duly approved and accredited inspection service.

§2342. Every holder of a permit or license must maintain a register setting forth the name of each aged or infirm person, or child under the age of sixteen years, the last previous address, age, nearest of kin, mother's maiden name, person responsible for his care and maintenance, and such other data as may be required by the state department of public welfare, and shall notify within forty-eight hours in writing, the state department of public welfare or the approved and accredited inspection service by which such license or permit was issued of any deaths or changes in the personnel of such home.

§2343. It shall be the duty of the district attorney of each and every county, upon application of the state department of public welfare or their authorized representatives, or an approved and accredited inspection service, to institute and conduct the prosecution of any action brought for the violation of any of the provisions of this chapter within his county.

§2344. Any person, association or corporation who or which maintains or conducts or assists in maintaining or conducting as manager or officer or in any other executive or administrative capacity an institution, boarding home or other place conducted as a place for the reception and care of aged or infirm persons or engages in finding homes for children under the age of sixteen years, or places or keeps any child under the age of sixteen years in any home without first having obtained a permit or license therefor in writing as provided in section two thousand three hundred thirty-nine of the Political Code is guilty of a misdemeanor.

Thus the work extends to

- (a) Child caring institutions (orphanages and preventoria).
- (b) Child placing organizations.
- (c) Home finding organizations (engaged both in adoptive and foster home work).
- (d) Day nurseries.
- (e) The accepting and filing of all relinquishments for adoption.

TABLE 25.

CHILDREN IN CERTAIN CALIFORNIA INSTITUTIONS FOR YEAR ENDING JUNE 30, 1924.

Type of institution	Registered July 1, 1923	Admitted during year	Dismissed during year	Registered June 30, 1924	Total cared for during year
In orphanages.....	4,756	3,642	3,414	4,984	8,398

¹Estimated at rate of 2 children per licensed home, for homes licensed by state and by accredited agencies except child placing agencies.

INSTITUTIONS.

The first duty of the state department in regard to children's institutions is to issue permits or licenses to "persons, associations or corporations to conduct institutions for the care of children under sixteen years of age," and "to prescribe the conditions upon which licenses or permits shall be granted and such rules and regulations as it may deem best for the government and regulation of such institutions."

This authorization gives the board wide powers in regard to children's homes. It establishes the right to determine an issue of importance: that of whether in the state's program for child care the opening of a new institution meets a fundamental need, or whether it is merely a duplication of work already in existence. This statute has since 1913 been frequently invoked and has deterred the launching of unnecessary projects.

Since 1924 the department has issued licenses to the following:

1924—Fanny Wall Day Nursery.

1924—Frances DePauw Spanish School.

1924—Gildee Converse Memorial Day Nursery.

1924—San Joaquin Valley Child Health Association.

1925—Alhambra Day Nursery.

1925—All Nations' Community House, L. A. (Day Nursery).

1925—Assistance League of Southern California Day Nursery.

1925—Rose Avenue Cottage, Pleasanton.

1925—Russian Children's Day Home.

1925—Veterans' Children's Lodge Day Nursery, Sawtelle.

Of these only three provide 24-hour care and each of these is for a special type of work.

The Frances DePauw devotes itself to the training of Mexican girls.

The San Joaquin Valley Child Health Association was organized for the care of under-par children. Rose Avenue Cottage is for a small group of problem children. All others are for day nursery care.

The revised law of 1925 requires that all licenses for institutions shall be renewed every twelve months. This obliges the department to make a review at the end of a year of the accomplishments and attainments of each organization. This provision serves an excellent purpose; for the institution that has outlived the ideal for which it was started may be diverted to some more useful field.

HOMES INSTEAD OF INSTITUTIONS.

California has been characterized as an "over institutionalized state," but the noticeable increase in the number of boarding homes and the growing appreciation of this type of child care is reducing continuously the orphanage population. One can only reiterate the hope that orphanages may specialize in their care of children and make as inaccessible as possible to indifferent parents a home which may be substituted for the child's natural home. The state has made a definite contribution to this problem in its numerous case surveys of orphanages. It can safely say that a conscientious effort is being made, wherever possible, to readjust the orphaned child to a normal environment instead of placing it in an institution. It is the child who is the victim of marital discord or discontent who is most often shifted into these so-called orphan asylums—sometimes only for a short period.

The acceptance of a child by an institution is a serious responsibility, which the superintendent must share with the parents. The world challenges the parents who too easily relieve themselves of the care of their offspring, and yet they may have gone through a long period of reflection and doubt before doing so. A single visit to an orphanage and a brief conversation with a superintendent should not mean an immediate admission, although often, in the eyes of the parent, the institution exists for just this purpose, and apparently here is a solution of the family difficulties. There should be judicial weighing by the superintendent, as to whether no other alternative is possible. The parent's situation is often painted as emergent, and if the institution accepts the statement in good faith, without thoughtful consideration and careful case work, a critical step is taken in the life of a child which may affect his entire outlook on life and his relation to society.

STUDY OF ADMISSIONS AND DISMISSALS.

There is only one proper way of accepting children for any extra-normal type of care and that is through the agency of a carefully trained person. Were changes brought about only through this means, many a discordant family might be reconciled by a refusal to take over the responsibility of the children. The question of dismissal parallels in importance that of admission. The superintendent who has had under his guidance the molding of a young life, has a responsibility as well as a natural interest in seeing that his foster child is placed in such surroundings that he will reap the benefits of his training and that

he is not carelessly placed in an environment that may react to his disadvantage. All too few institutions can tell of any but their distinguished successes or notable failures, and yet this is the one means a director has of testing the efficacy of his work. Homes which have at the present time case workers who study admissions and dismissals are the San Francisco Nursery for Homeless Children, the Infant Shelter, the Homewood Terrace Asylum, the Presbyterian Orphanage and Farm, Los Angeles Jewish Orphan Asylum, St. Mary's, St. Vincent's, and the Roman Catholic Orphan Asylum.

IMPROVED STANDARDS IN ORPHANAGES.

Our agents have devoted much time to studies of dietaries in orphanages and have encouraged the greater use of protective foods. Starches are still too much in evidence in certain of them, but an intensive drive for a health program is constantly being carried on. Institutions are few in number which do not have scales, and weighing and measuring is a matter of routine. Diphtheria immunization is demanded for each entrant in homes of high standards, and an epidemic of the disease is almost a thing of the past. We believe that the state ought to make a minimum requirement regarding health examinations and ask for its enforcement. Too many institutions satisfy themselves with an inspection at time of admission and then demand only the attendance of a physician when an illness occurs. They have not yet accepted the modern well baby or well child clinic plan.

In the past year the department has been exceedingly fortunate in having the services for the summer months of an able representative of the state tuberculosis society, who has examined children, given talks on nutrition, and inspected general health conditions. Her work is welcomed by directors and superintendents and is of wonderful benefit to the children.

CONFERENCES ON ORPHANAGES.

The department has held two conferences with orphanage representatives, one in northern and one in southern California. At the first the San Francisco Nursery for Homeless Children acted as hostess; at the second the Los Angeles Orphans' Home. At both, health and nutrition problems were discussed by expert pediatricians.

HANDICAPPED CHILDREN.

There are three groups of children whose specialized care is commanding attention. These are the cripple, the mentally and the physically retarded child. The first, the cripple, has been greatly benefited by the devotion of two organizations. Through the fraternal order of Shriners, a fifty bed hospital, equipped with every modern facility known to orthopedic science is correcting deformities, bringing scientific resources to restoring handicapped children to normal condition. The Rotarians have undertaken the expense of the care of a large group. The program needs to be enlarged: more beds are required, more money for treatment of specialized type, more facilities for after care, such as boarding and convalescent homes, where expert care started in hospitals may be continued. Re-education, which takes into account the physical handicap, must be systematically carried out.

The home maintained by Mrs. Elise Drexler, known as Drexler Hall, gives "after care" of the highest type for orthopedic cases. The buildings are one story, well planned and provide every facility known to modern medicine for the rehabilitation of the inmates.

The Hospital for Crippled Children in Los Angeles and the Shriners Hospital in San Francisco have met a need in the state which has been a long felt and unanswered one. Both call for the whole-hearted endorsement of all of those interested in child welfare.

The International Society for Crippled Children has in recent months started a state-wide organization in California. It is at this time making a study of the state's resources, which ought to be useful and serve as a basis for an extensive program. Legislation of benefit to this group will doubtless be presented at the session of 1927.

PREVENTIVE ACTIVITIES.

The increasing interest in preventive medical work for children has led to the establishment of numerous well baby clinics, of preventoria and of summer camps, each one of which in its peculiar way makes a contribution to the general program. The influence of an awakened public health consciousness is manifesting itself. Pasadena has a new and model preventorium for boys, where fresh air treatment is the prime means of restoring health. The building, delightful in its appointments, is in a setting which of itself spells health. The public health nurse, ever vigilant, has been instrumental in the fostering of summer camps, where the under-par children of her community are started on the road to normal health. Many counties and a number of Red Cross chapters are underwriting their cost. The following institutions have camps which are in operation for the vacation months: Boys' Aid Society, San Francisco Protestant Orphanage, West Oakland Home, Boys' and Girls' Aid Society of Pasadena, and the Los Angeles Orphans' Home. All of these are visited by our agents and the cooperation of the State Board of Health is invoked, so that there is the assurance that every sanitary precaution has been observed.

The Los Angeles County Tuberculosis Society has a camp which is model in its equipment. It maintains a full year schedule, has a well trained and adequate staff and full time dental service.

In connection with Stanford Hospital there is a convalescent home which meets a great need. All types of convalescent children are admitted, the equipment is modern, staff adequate, and much successful sun treatment has been carried on. This institution was organized and is being carried on by a splendid group of women who give the young patients their constant care and interest.

PLANS.

Plans for new buildings have been studied for the following:

- Convent of the Good Shepherd.
- David and Margaret Home.
- Helping Hand Home, San Diego.
- Home of Benevolence, San Jose.
- Infants' Shelter.

CHART 9.
FLUCTUATION IN POPULATION OF CHILDREN'S INSTITUTIONS*
1908-1926.

*Includes institutions for dependents only, those for delinquents only, and those for both dependents and delinquents.

Lark Ellen Home.
 Long Beach Home for Girls.
 Masonic Home, Covina.
 McKinley Home, Gardena.
 Oakland Ladies' Relief (Nursery).
 Pasadena Open Air School (Preventorium).
 Protestant Orphan Asylum, San Francisco.
 Pasadena Day Nursery.
 Salvation Army Truelove Home.
 San Diego Children's Home.
 San Joaquin Valley Nutritional Home.
 San Francisco Nursery for Homeless Children.
 San Francisco Ladies' Protective and Relief Society.
 St. Vincent's, Santa Barbara.
 St. Vincent's, Marin County.

ANALYSIS OF TABLES.

Chart No. 8 shows the fluctuation in population of children's institutions from 1908 to 1926. June 30, 1926, showed a total increase of 1000 for all the types.

Table No. 28, showing the movement of population, is far more disquieting. If California's increase in institutional population were only 1000 in the course of 18 years, we might feel proud of our achievements, but the great turnover indicated by table No. 28, calls for careful consideration of all those interested in child welfare. If in one year 10,000 children come and go, with the highest number at one time reaching 8000, the situation is one for intensive study.

An analysis of the parental status of these groups shows a decrease in proportion of half orphan children, but a slight increase of whole orphan children, which ought to be made the subject of careful investigation. The gradual increase in the number of children having both parents requires vigilant watching, but is doubtless one symptom of social conditions of the present day, which are affecting children in all walks of life.

Table No. 31 shows that 42.2 per cent of children in orphanages are half-orphans while 42.6 per cent have both parents.

Table No. 32 shows that 62.2 per cent of children in orphanages are placed by their parents or guardians while only 3.4 per cent are placed by social agencies.

This proves conclusively that social workers are availing themselves of boarding homes rather than of orphanages.

TABLE 28.

Movement of Population of Children in Institutions* for Years Ending June 30,
 1924, 1925 and 1926.

	1924	1925	1926
In institutions at beginning of year	5,244	5,600	5,999
Admitted during year	4,284	4,176	4,819
Discharged during year	4,019	3,686	4,341
Total cared for during year	5,509	6,090	6,478
In institutions at end of year	5,362	6,090	6,478

**STATE DEPARTMENT OF PUBLIC WELFARE, BUREAU OF CHILDREN'S
AID (STATE BOARD OF CONTROL.)****STATE CAPITOL, SACRAMENTO.****STANDARDS FOR CHILDREN'S INSTITUTIONS.****1. DEFINITION**

A children's institution shall be defined as a place for the reception and full-time care of (fifteen or more) children, the support of which is derived in whole or in part from public or private benevolence or from boarding children.

2-a PLANS

Plans for new building or parts of building must be submitted to the State Department of Public Welfare for approval before any contracts are let or work started. All exits shall open outward.

2-b LICENSE

Chapter 18, Statutes 1925, requires that a license must first be obtained from the State Department of Public Welfare before an institution is opened. At the same time, it is urged that the directors of the proposed institution investigate and study the requirements of local organizations, such as boards of health and welfare departments.

3. GOVERNING BOARDS

Where there are over fifteen children, the home shall be incorporated with a board of directors of five to seven members, a majority of whom shall be residents of the city or town or county in which the home is situated. The governing board ought to be composed of persons who will take an active interest in the work and give their personal attention to it.

4. WATER SUPPLY AND SEWAGE DISPOSAL (Stats. 1915, p. 800)

(a) Water supply and sewage disposal in children's institutions must meet the requirements and receive the endorsement of the State Board of Health preliminary to being licensed by the State Department of Public Welfare.

(b) Swimming pools for children's institutions must meet the requirements of and receive a permit for operation from the State Board of Health.

5. BUILDINGS

Before planning to build or to make additions, it is recommended that the directors confer with local building authorities to ascertain what are their minimum requirements regarding sanitation, fire protection, materials, safety, lighting, ventilation, and general arrangement of building; also to learn the state laws affecting institutions and to study the manuals of the State Housing Act of California and the State Board of Health.

6. DORMITORIES

(a) There shall be a space of at least 3 feet between the sides and 2 feet between the ends of the beds.

(b) Inasmuch as the State Housing Law demands a limit of 20 beds in a dormitory, we are recommending that at no time a larger number than this be in any one dormitory in an orphanage.

(c) The height of the ceiling shall be at least 9 feet. Window space shall measure at least one-eighth of floor space.

7. PHYSICAL CARE

(a) A nourishing and well balanced diet shall be provided, a minimum of one quart of whole milk daily to be allowed for each child under six years of age and one pint for all other children. Butter shall be served at least twice a day. A plentiful supply of green vegetables and fruit in addition to meat shall be furnished. Attention is called to the Jafa Dietary outlined in the report of the Bureau of Children's Aid of 1922. The state law prohibits the use of substitutes for butter in any institution receiving state aid.

(b) The milk used by the children either must be pasteurized in accordance with the pure milk law, Stats. 1917, page 803, and amended by Statutes 1919, page 326, or from tuberculous-free cows as determined by the tuberculin test. Tests will be made free on application to the State Department of Agriculture, Sacramento.

(c) Formulae for feeding infants ought to be prescribed by a registered physician.

(d) Children shall be bathed in warm water at least twice a week and no two children may be bathed in the same water.

(e) A separate bed with metal frame shall be provided for each child, with good springs, clean comfortable mattress and adequate bedding. Rubber sheeting when necessary.

(f) Showers and foot tubs are recommended as exceedingly desirable.

(g) One toilet should be provided for every ten children and one tub for every fifteen.

(h) Individual toilet articles as follows—brush and comb, tooth brush, soap, wash cloth and towel—shall be supplied each child and kept in a separate receptacle, and each child shall be instructed in their proper use. Wash cloths and towels to be replaced at least twice a week.

(i) The clothing of the children shall be clean, neat, and seasonable, and of a design and quality to develop the self respect of the child. No clothing shall be used in common. Each child shall have his own supply and a sufficient number of change at least twice a week.

(j) Each child shall have a well ventilated locker with adequate space for his possessions. This is necessary to develop a sense of pride and ownership.

S. FIRE PROTECTION

Fire protection shall be installed under the advice of the chief of the local fire department and shall conform to the rules and regulations outlined by the State Department of Public Welfare in the pamphlet which is herewith enclosed. A water pressure system is advocated in suburban and rural institutions.

9. MEDICAL CARE

(a) A properly equipped infirmary including:

1. Wards—ratio of one bed to every fifteen children.
2. Isolation quarters with adjoining bath and lavatory facilities. This department to be separated from main ward.
3. Dispensary—equipped with adequate supply of necessary drugs and dressings.
4. Nurses' quarters—with private lavatory.
5. Equipment—all necessary sick room appliances—sufficient in quantity to permit of ample opportunity for proper cleanliness and disinfection.

(b) Institutions with a population of more than fifty children should have a trained nurse in residence.

(c) It is recommended that all entrants be segregated for a period of 14 days following admission.

(d) During period of segregation a complete physical examination should be made and findings recorded on Physical History Sheet for filing.

1. Nose and throat cultures for diphtheria if not previously made. It is recommended that all children under five years of age should be immunized against this disease.
2. Wassermann tests when indicated (to be followed by treatment if positive).
3. Vaccination against smallpox should be enforced for all children.
4. Intestinal parasitic diseases are frequently found among children of Latin races who have recently been admitted to this country. Where pathological conditions are indicated, laboratory tests should be made and subsequent treatment provided.

(e) It is very important that children be weighed every month and measured every three months. Medical blanks on which to keep standard records are furnished free of charge by the State Boards.

(f) Dental examinations shall be made at regular intervals and corrective work done promptly. Tooth brushes and dentifrice should be provided and their use enforced at least twice a day.

(g) Mental tests should be made.

(h) The Board will be pleased to furnish institutions with a list of health centers, clinics, hospitals and laboratories of which they may avail themselves.

10. EDUCATION AND RECREATION

(a) The education shall conform to the requirements of the State and County, and all teachers shall be duly certified.

(b) Children shall receive moral and religious instruction, provided that no child shall be required to attend religious services nor to receive religious instruction in a faith different from that of its parents or guardian.

(c) A library of books suitable for the use of the children shall be provided and shall be regularly accessible to them.

(d) Recommendation is made that the institution affiliate with the nearest county library and secure their interest and cooperation in the problems of reading and books that will correlate with school work.

(e) Playgrounds and playrooms shall be provided properly equipped with apparatus, games and toys.

(f) It should be the duty of some one officer of the institution to supervise and encourage play activities.

11. EDUCATIONAL TRAINING

The Board can not too strongly emphasize the necessity of giving every child some sort of vocational training that shall be a means of discovering what direction his activities may take at some future time and will give him opportunities for learning to use his hands.

12. DISCIPLINE

There shall be no corporal punishment. The Superintendent shall be the person to determine what form of discipline is to be administered in extreme cases and records kept of punishments.

13. CLASSIFICATION OF CHILDREN

Definitely wayward or feeble-minded children shall not be retained in an institution primarily for the care of needy normal children.

14. SUPERVISION

The Superintendent shall be a person with experience and training in the care of groups of children, and a knowledge of institutional management and an understanding of child psychology. He shall not be expected to solicit funds, but shall devote his time to the organization and conduct of the work of caring for the children.

15. ADOPTION

This Board favors the placing of adoptable children in suitable private homes. It urges very strongly upon institutions the value of effecting all adoptions through licensed home finding societies who have a complete machinery for investigation and supervision of homes.

16. ADMISSIONS AND DISCHARGE

A careful investigation of each application for admission shall be made, to determine whether the best interests of the child will be served by admitting him. This is best secured through the services of a trained social worker. The employment of such a person may be shared economically by more than one institution.

17. All accounts shall be kept in conformity with the system prescribed by the State Department of Public Welfare and the State Board of Control.

NAME OF SUPERINTENDENT _____

[illegible]

The State Department of Public Welfare wishes complete information as to the amount paid by state, county or relatives for each child in your institution on June 30, 19____. You need not give any names, but list the children and the amount of the monthly payments by number.

ILLUSTRATION :

1. Harry Jones, for whom is received \$10 state aid per month.
2. William Brown, for whom the county pays \$11 per month.
3. John Doe, for whom the parents pay \$10 per month.
4. George Black, for whom the county pays \$5 and the parents pay \$6 per month.
5. Frank James, for whom the county pays \$5 and the state pays \$6 per month.
6. Henry Blank, for whom no aid is received.

THE FOLLOWING IS THE METHOD OF PRESENTING THIS INFORMATION :

Number	State	County	Parent	No Pay
1	\$10 00			
2		\$10 00		
3			\$10 00	
4		5 00	6 00	
5	6 00	5 00		
6	-----	-----	-----	-----

Please write the name of your institution on every sheet of paper used in listing the children. We recommend that you keep a duplicate copy for your own files. Kindly send this information together with your annual social statistics report, to the State Department of Public Welfare.

CHILD PLACING AND HOME FINDING.

Here again the first duty of the state department lies in the granting of licenses. The Statutes of 1911 enacted regulations regarding "the work of placing dependent children into homes." The Statutes of 1913 deal with homes "conducted as a place for the reception and care of children."

These two laws cover the field of finding boarding and adoptive homes for children and of placing children in either type of home. The work of finding homes is carried on to a large degree by local boards of health, with the supervision of the State Department of Public Welfare, and to a more limited degree by social service agencies.

ACCREDITED AGENCIES.

The state has demonstrated its desire to avoid duplication in its activities in behalf of children. In writing its revised law, it grasped the opportunity of eliminating an unnecessary overlapping which had for many years existed between local communities and the state board and which, according to an opinion of the Attorney General, could not be avoided under the law existing up to 1926. The former law required the issuing of a license by the state for every home found for a child. Local health departments were required to issue permits to the same homes. This meant an extensive piece of clerical work in each office, with no gain in the welfare of children. The present law gives the state office the right to recognize as its approved and accredited agents certain local departments.

The law reads as follows:

§2337. No person, association or corporation shall hereafter maintain or conduct in any city, county, or city and county, any institution, boarding house or other place for the reception and care of aged or infirm persons nor engage in the finding of homes for children under sixteen years of age, nor place any child under sixteen years of age in any home, without first obtaining a license or permit therefor in writing from the state department of public welfare or from an inspection service approved or accredited by such state department of public welfare.

For the purpose of this chapter the term "approved and accredited inspection service" shall be construed to mean the health department of a county or group of counties, city or group of cities, or city and county maintaining a qualified public health service which shall include at least one regularly licensed physician or a qualified social service inspection force which inspection service has been approved in writing by the state department of public welfare of the State of California.

§2338. The state department of public welfare and all approved and accredited inspection services are hereby authorized to issue permits or licenses to persons, associations or corporations to conduct institutions, boarding homes, or other places for the reception and care of aged and infirm persons or to engage in the finding of homes for children or placing children in homes, and to prescribe the conditions upon which such permits or licenses shall be granted and such rules and regulations as may be deemed best for the government of such institutions, and said inspection service or department is further empowered by one or more of its members, secretary or duly authorized representative, to inspect and report upon conditions prevailing in all such institutions, homes or places.

§2339. A permit or license issued by the state department of public welfare or by an approved or accredited inspection service shall expire twelve months from date of issuance of license, and application for renewal of a permit or license must be filed ten days prior to its expiration each year, otherwise it shall stand as automatically canceled.

§2340. Permits or licenses may be revoked for cause after a hearing before the state department of public welfare or an approved and accredited inspection service, after written notice of the time and place of such hearing and the charges made against the holder of the permit or license has been duly served on him, not less than ten days prior to the time fixed for such hearing.

§2341. No license may be transferred in any case, without the consent of the department, and no change of location of any institution, boarding house or other place for the reception and care of aged or infirm persons may be made without permission from the state department of public welfare or a duly approved and accredited inspection service.

§2342. Every holder of a permit or license must maintain a register setting forth the name of each aged or infirm person, or child under the age of sixteen years, the last previous address, age, nearest of kin, mother's maiden name, person responsible for his care and maintenance, and such other data as may be required by the state department of public welfare, and shall notify within forty-eight hours in writing, the state department of public welfare or the approved and accredited inspection service by which such license or permit was issued of any deaths or changes in the personnel of such home.

§2343. It shall be the duty of the district attorney of each and every county, upon application of the state department of public welfare or their authorized representatives, or an approved and accredited inspection service, to institute and conduct the prosecution of any action brought for the violation of any of the provisions of this chapter within his county.

The following have been recognized as accredited agencies:

1. Department Public Health, San Francisco.
2. Berkeley Health Department, Berkeley.
3. Alameda Public Health Department, Alameda.
4. San Joaquin Local Health Department, Stockton.
5. Oakland Health Department, Oakland.
6. Department of Health, Los Angeles City.
7. Good Cheer Health Center, San Jose.
8. Public Welfare Commission, Los Angeles.
9. Orange County Health Department, Santa Ana.
10. Visiting Nurses Association, Santa Barbara City.

The state reserves the right to make studies at regular intervals.

Following is the authorization which outlines conditions under which an organization is recognized as an agent of the state in the matter of issuing licenses:

The Department of Public Welfare of the State of California by resolution of its executive board passed at a regular meeting-----on-----in accordance with section 2337 of the Political Code of California, hereby appoints-----as an approved and accredited agency and grants to said-----the authority to issue licenses to persons engaged in conducting boarding homes for children under the following conditions:

The limits of territory covered by said agency shall be-----

Every licensed home shall meet the requirements prescribed by the accredited agency and also shall comply with the specifications of the state law and the minimum requirements for family boarding homes for children as prescribed by the State Department of Public Welfare.

No home for more than six children shall be licensed by the accredited agency.

Applications for a larger number shall be referred to the State Department of Public Welfare and shall be jointly considered by the local and state departments.

All forms and records used by the accredited agency, including application, reference, and inspection blanks, license, register, and form letters shall be approved by the State Department of Public Welfare, which will supply samples of approved forms.

Monthly reports shall be made to the State Department of Public Welfare on blanks to be supplied by the State Department.

All problem cases shall be referred to the State Department of Public Welfare.

Promptly at the close of each month the agency shall forward to the State Department of Public Welfare the names and addresses of all homes to which a license has been issued and the number of children for whom a license has been issued; and the names and addresses of all homes to which a license has been denied and the reason for this action.

Agents of the State Department of Public Welfare shall from time to time make visits to homes licensed by the agency for the purpose of determining that the state requirements are being met.

This authorization shall be effective for one year from date, and the desire of the accredited agency for renewal shall be expressed in writing thirty days prior to its expiration.

A close relationship has been established with the agencies who are deeply appreciative of the endorsement of their work by the state. Every month each agency transmits a schedule of its activities, names of homes to whom licenses were granted or withdrawn or denied, and the reasons for denial in every case. Frequent conferences have been held with the various groups.

SURVEYS.

Extensive studies have been made of the child placing of the Associated Charities, the Little Children's Aid, and the Eureka Benevolent Society of San Francisco, and of the home finding of the San Francisco Board of Health. In Oakland a survey was made of the Associated Charities and the Catholic Ladies' Aid. A survey of the Berkeley Welfare Society and the City of Alameda Health Department and Social Service Commission completed the group of studies.

These have been found to have attained a high standard. It is true that the case load in most instances is too heavy, a matter to which welfare federations and communities must give their thoughtful consideration.

CASE LOAD.

This is not a condition peculiar to child placing societies. Few, if any, organizations for social work are adequately staffed. There is no group of public servants which works at so great a sacrifice. California must plead its cause more effectively than it has, both in public and private service. The teacher who instructs a group of more than thirty-five is not meeting the highest educational standard, and yet here, where human values and happiness are at stake, one hundred families and homes must be supervised and stabilized and often reorganized by a single person.

There must be brought into this field of child welfare the same thorough and scientific approach to the problem of the individual child as has been concretely carried out in the best type of school.

Mere numbers of children placed in boarding homes do not connote success. Success lies in excellence of first placement, in completeness of diagnosis. The final test should be permanence of placement. Constant supervision is essential. Children frequently moved and children negligently left in an unsatisfactory home are equally an indication of superficial work.

*Exclusive of those under supervision of seven child placing agencies.

INCREASE IN BOARDING HOMES.

It is conceded that a swing from the placing of children in institutions to their placement in homes is an indication of an enlightened standard of child care. It is certainly a recognition of the normal method of child well-being. The rapid increase in number of boarding homes from 1916 to 1926, as indicated by the following charts, tells California's story in graphic form. A list of 2902 homes indicates care for some 6,000 children.

In the last year the state held a conference with representatives of all child caring groups. At this time, and after due consideration, the state's requirements were changed, so as to be more closely in keeping with present policies.

The higher number of homes emphasizes the necessity for close affiliation of the state and local agencies. Where there was only a small group of boarding homes, the state could and did attempt to investigate and supervise each. This can not continue and do justice to so extensive a field. The state, therefore, must delegate to county and private groups the constant supervision which the field demands, reserving always the right of making studies of the accomplishments of the agencies.

The increase of licensed boarding homes during the past four years is not only great in itself but also in relation to the growth of children's institutions. Chart No. 11, showing capacity of boarding homes and institutions, is interesting in this connection. The capacity of orphanages excludes those caring only for delinquent children. All boarding homes, which means those licensed directly by the Department of Public Welfare and the accredited agencies, as well as those under the supervision of child placing agencies, are counted under capacity of boarding homes. Capacity is estimated at the rate of two per home.

Chart No. 12, showing the capacity of boarding homes, indicates a proper proportion of children to homes. The ideal boarding home is for two, unless it be for infants where the most desirable homes limit themselves to the care of one child.

San Francisco Office: 625 State Building

Minimum Requirements for Family Boarding Homes for Children.

LICENSE REQUIREMENTS

POLITICAL CODE—SECTION 2338: The state department of public welfare and all approved and accredited inspection services are hereby authorized to issue permits or licenses to persons, associations or corporations to conduct institutions, boarding homes, or other places for the reception and care of aged and infirm persons or to engage in the finding of homes for children or placing children in homes, and to prescribe the conditions upon which such permits or licenses shall be granted and such rules and regulations as may be deemed best for the government of such institutions, and said inspection service or department is further empowered by one or more of its members, secretary or duly authorized representative, to inspect and report upon conditions prevailing in all such institutions, homes or places.

SECTION 2339: A permit or license issued by the state department of public welfare or by an approved or accredited inspection service shall expire twelve months from date of issuance of license, and application for renewal of a permit or license must be filed ten days prior to its expiration each year, otherwise it shall stand as automatically cancelled.

SECTION 2340: Permits or licenses may be revoked for cause after a hearing before the state department of public welfare or an approved and accredited inspection service, after written notice of the time and place of such hearing and the charges made against the holder of the permit or license has been duly served on him, not less than ten days prior to the time fixed for such hearing.

SECTION 2341: No license may be transferred in any case without the consent of the department, and no change of location of any institution, boarding house or other place for the reception and care of aged or infirm persons may be made without permission from the state department of public welfare or a duly approved and accredited inspection service.

SECTION 2342: Every holder of a permit or license must maintain a register setting forth the name of ----- or child under the age of sixteen years, the last previous address, age, nearest of kin, mother's maiden name, person responsible for his care and maintenance, and such other data as may be required by the state department of public welfare, and shall notify within forty-eight hours in writing, the state department of public welfare of the approved and accredited inspection service by which such license or permit was issued of any deaths or changes in the personnel of such home.

SECTION 2344: Any person, association or corporation who or which maintains or conducts or assists in maintaining or conducting as manager or officer or in any other executive or administrative capacity an institution, boarding home or other place conducted as a place for the reception and care of aged or infirm persons or engages in finding homes for children under the age of 16 years, or places or keeps any child under the age of sixteen years in any home without first having obtained a permit or license therefor in writing as provided in section two thousand three hundred thirty-nine of the Political Code is guilty of a misdemeanor.

1. DEFINITION

A family boarding home for children is a private family home which accepts one or more children to board with or without compensation.

2. NUMBER OF CHILDREN

(a) Since the family boarding home is primarily a home, the number of children in it shall not exceed that number which it is customary to think of as constituting a normal family group. The number of the children in the household should not exceed six; if any exception be made it shall be with permission of the state department of public welfare.

(b) Not more than two infants under two years of age shall be allowed in any family boarding home under the supervision of one adult.

3. FAMILY CONDITIONS

(a) The foster mother must be of suitable age and temperament to care for children. The mental and physical health of each member of the family must be good.

(b) There shall be no mentally defective person in the family.

(c) No adult male roomers or boarders shall be permitted.

(d) Children shall not be boarded in homes which can not be maintained at least on a minimum standard without the income derived from the board of children in the home. The money paid for the care of an infant above the amount for food, and clothing where agency does not provide it, shall be regarded as a legitimate income. The margin of profit above the amount required for the need of older children shall be regarded as a legitimate income.

(e) Satisfactory references must be furnished from persons who know the applicant in her own home as a housekeeper and a homemaker.

4. HOUSING

(a) The home must conform in building and maintenance to the sanitary and fire safety ordinances of the city and county, and be endorsed by the local health officer or a person accredited by the state department of public welfare.

(b) The home must be in a residence district (not commercial or factory) with sufficient room to accommodate the family group and boarded children in a comfortable and sanitary way, and with yard space sufficient for a home playground for the children.

(c) The home must be in a district where the children can attend a school which is within convenient distance. Each child shall be given an opportunity to attend Sabbath school or a church of the religious faith of its parents.

(d) Sleeping rooms must afford at least 500 cubic feet of space for each occupant and each bedroom must have sufficient outside windows. No child may sleep in a room opening into an inner court.

(e) Children shall sleep in bedrooms, have individual beds, and must be under the close supervision and within call of an adult at night.

(f) Boys and girls over three years of age shall sleep in separate rooms. Children over three years of age shall not sleep in the same bedroom with adults of opposite sex.

(g) Each bed shall have a good spring, a clean, comfortable mattress, adequate bedding and rubber sheeting for infants and wetters.

5. HEALTH OF CHILDREN

(a) Before admission to the home each child shall be taken to a physician or to a health center for a physical examination, results of which shall be given to the foster mother.

(b) Foster mothers are urged personally to take their children to health centers at regular intervals; infants no less than once a month.

(c) Proper medical attention shall be provided at all times.

(d) Death or any illness of a child must be reported at once to the agency issuing the license and to the parent or guardian of the child.

(e) Every child shall have a bath no less than twice a week and infants up to two years shall be bathed every day.

(f) Individual hair and tooth brushes, towels, and other necessary toilet articles must be provided, and each child shall be trained in their proper use. Toilet articles for each child shall be kept separately.

(g) Children under fourteen years shall have no routine work other than school tasks and simple home duties, providing these do not interfere with schooling and necessary recreation.

(h) During the absence of the foster mother, children must be left in charge of a competent adult.

6. DIET OF CHILDREN

(a) The dietary must be wholesome, nutritious, and suitable for the children of various ages; butter, eggs or fish, fresh fruit and vegetables must be served each day.

(b) Formulæ for infants should be prescribed by a physician.

(c) Each child over four years of age must have at least one pint of fresh milk per day; every child under four years at least one quart of milk each day. Milk must be either pasteurized in accordance with the state pure milk law, or from tuberculin free cows, as determined by the tuberculin tests. Tests will be made free on application to the state department of agriculture, Sacramento.

(d) No butter substitute must be served children. Only fresh butter contains the important food elements necessary for growth in children.

7. DISCIPLINE

(a) Foster mothers are urged to consult with the licensing agency for advice and literature on problems of behavior in children.

(b) Corporal punishment must not be given boarding children. Bed-wetters can be best cured through other methods than punishment. Information on this subject will be supplied by the licensing agency or the department of public welfare.

8. REPORTS

(a) The law requires that a register shall be kept in which the name of the child, the last previous address, age, nearest of kin, mother's maiden name, person responsible for his care and maintenance, amount of board paid, dates of visits to clinics or physicians, date of removal of child from home, by whom and their address, and for what reason removed. Registers are to be provided by the licensing agency and must be open to inspection at all times.

(b) The law requires that the licensing agency must be notified within 48 hours in writing of any changes in the personnel of the home.

(c) Any change in the management or address of the home nullifies the existing license and application must be made at once for renewal.

(d) Failure to make reports may constitute cause for revocation of license.

(e) The foster mother must show her license to the newspaper when advertising for children. Newspaper offices have been requested to ask to see the license before publishing an advertisement for any home.

A manual of suggestions regarding the care of children in family boarding homes will be furnished by the department of public welfare on application.

Three new sets of filing cards were made in 1924: For the children's boarding home file; for the children's institution file; and for the maternity homes and hospitals file.

The active licensed home, institution, or hospital is recorded on a yellow card and the denied application or the revoked license is recorded on a red card.

The blue card is for any place listed in the files but which is not licensed because it does not come under the jurisdiction of the department, or the application was dropped because the work was discontinued, or for other similar reasons.

ADOPTIVE HOME FINDING.

The law gives the right to place children for adoption to agencies licensed for this purpose by the State Department of Public Welfare and to orphanages receiving state aid. The following agencies have been given the legal right to place children :

Associated Charities of Oakland.

Associated Charities of San Francisco.

Berkeley Welfare Society.

Catholic Ladies' Aid of Oakland.

Children's Home Society of California.

Eureka Benevolent Society of San Francisco.

Jewish Orphans' Home of Southern California.

Little Children's Aid of San Francisco.

Native Sons' and Native Daughters' Central Committee on Homeless Children.

Of these the Children's Home Society of California and the Native Sons' and Native Daughters' Central Committee on Homeless Children confine their activities to the permanent placement of children. Specialization of this kind is a fortunate one and even though the seven other agencies listed above and state aided orphanages may legally consummate adoptions, there is a tendency to refer adoptable children to the two large agencies, a policy heartily indorsed by the state. Only two children were adopted directly by the seven child placing agencies during 1926, the rest being referred to the Native Sons and Daughters or the Children's Home Society.

SURVEYS.

During this biennium the two largest societies of California, the Children's Home Society of California, and the Native Sons and Native Daughters were studied from a case point of view. About forty cases in each group were the subject of a thorough follow-up. In both instances the necessity for full protection to home and child were stressed. Meetings were held with the directors with a view to reviewing standards and exchanging views on legal procedure and on possible changes in the law.

At the State Conference of Social Work held at Pasadena in May, 1926, one session was devoted to this subject. It was viewed from several angles: that of technique, of legal procedure, and of social interest. The statutes were analyzed and discussed. As a result, the State Department of Public Welfare called a number of additional meetings, which became a valuable forum for the exchange of views. The two large adoptive societies were well represented as were the welfare organizations who are constantly dealing with the problem.

CHANGES IN LAW.

The general conclusion reached was that the chief cause for concern was for those children whose placement was effected without the assistance of a society regularly organized to bring about permanent placements. Such placements are largely by newspaper advertisements, by maternity hospitals, who are ignorant of or unwilling to conform to

the state's legal requirements or by relatives or parents who may relinquish children without sufficient safeguard for their future. The state law is clear in so far as it requires that any association, person or corporation placing a child must have a license, but the utmost vigilance is required to enforce this law. Fully one-half of the adoptions in the state are of the independent type.

The entire group present at our discussions was anxious to see this condition remedied, and so a definite recommendation was made that the law be amended to the end that no adoptions be completed except subject to some form of investigation by a licensed agency, or the state department. This practice is already in operation in Alameda County. There it is a matter of routine requirement on the part of all judges.

The giving up or accepting of children for adoption is a step of such grave importance that the greatest care must be observed in safeguarding its every aspect. The parent who is about to relinquish must be told of the resources that present themselves for the preserving of family ties. No child ought to be separated from a mother because of poverty alone, nor for a cause that exists only temporarily. The child of defective parentage ought not to be accepted for adoption unless he is of such age that he may be given conclusive physical and mental tests. All these circumstances arise in uninvestigated adoptions. California has been fortunate in having a law which gives the state department the responsibility of licensing and supervising adoptive agencies, but further protection must be brought about.

RELINQUISHMENTS.

A provision of the statutes of 1917, revised in the law of 1925, requires that when a child has been relinquished by its parents or guardians for the purpose of adoption, a copy of the relinquishment must be filed with the State Department of Public Welfare prior to the commencement of any adoption proceedings affecting such child, as provided in section 224 of the Civil Code.

This section gives the department an opportunity to check up relinquishments, to scrutinize the form in which they are made, and to protect parents adoptive and adopting from irregularities in relinquishment procedure.

In the Los Angeles office 660 such documents were filed from June 30, 1924, to July 1, 1926, and in San Francisco there were 516, making a total of 1176. It is believed, however, that a number of adoptions go through the courts of California without the observance of this requirement. The total number of adoptions in 1925 was said to be 1252. The strengthening of certain provisions of the adoption law will help to remedy this omission. These, it is hoped, may be brought about in the legislature of 1927.

The files of the department carry many surprising stories of relinquishments to unfit persons, which have been corrected whenever possible, but which ought to be made legally impossible. The cooperation of the newspapers of the state is being secured by degrees to the end that all persons wishing to place a child for adoption or to secure a child for adoption, shall be referred to recognized licensed societies, thus eliminating an all too easy method of disposing of unwanted children.

Form Used in Acknowledging Relinquishments.

DEPARTMENT OF PUBLIC WELFARE

625 State Building, Civic Center, San Francisco

1106 Sun Finance Building, Los Angeles

Headquarters, State Capitol, Sacramento

I hereby certify that there has been filed this day in the office of the Department of Public Welfare of the State of California, a copy of the relinquishment of_____

by_____

to_____

said relinquishment bearing date_____

IN WITNESS WHEREOF, I have hereunto set my hand this_____

_____ day of_____ 19_____

DEPARTMENT OF PUBLIC WELFARE

By_____

Secretary.

DAY NURSERIES.

The jurisdiction of the State Department of Public Welfare was written in the statutes of 1913 and renewed in 1925. It requires a license for any person, association or corporation who or which conducts a place of reception for the care of children under the age of sixteen.

Licenses have been issued to 23 day nurseries which represent a disbursement of considerably over \$160,000 for a year, expended for care of some 5100 children. In addition to these there are numerous industrial nurseries maintained only during the season of crop harvesting.

Early study of these institutions is necessary in order to give assurance of the necessity for their existence. Once this is established, the opportunity presents itself for continued constructive social work, filled with high opportunities. The work of a nursery must not begin with the reception of a child in the morning nor end with his dismissal in the evening. There ought to be an effort to reach out and determine the causes for admission and so to adjust them that home life and economic conditions may be reorganized and obviate the necessity for the separation for even a part of the day of a parent and her child. There must be no opportunity left for the shirking of parental responsibility.

Vigilance must be exercised to keep a check on changes in a home.

The day nursery often proffers the only alternative to the breaking up of a home. The mother dependent on inadequate wage must look to the nursery to supervise her children during her hours of employment. She has a sense of security in the realization that her family is being cared for while she must be away from them.

It is interesting to note that in the past biennium no license has been issued to a new orphanage, but approval has been given to the opening of the following day homes:

Alhambra Day Home for 26.

All Nations Community House for 60.

Assistance League Day Nursery for 30.

Jewish Mothers' Alliance for 30.

Russian Children's Day Nursery for 30.

Veterans' Children's Lodge for 15.

Each one was carefully studied before receiving the approval of the state department and each one was found to fill a definite need in its community.

DAY NURSERY STANDARDS

DEFINITION OF A DAY NURSERY.

A day nursery is a place in which three or more children not of common parentage are cared for apart from their parents during any part or all of the day. It differs from a kindergarten, where children are sent primarily for education, in that it cares for the child of pre-school age, as well as for those who need supervision after school hours. It differs from an orphanage or foster home in that no night care is given.

ORGANIZATION OF THE DAY NURSERY.

Before establishing a day nursery it is necessary that a thorough study of the social and economic conditions of the community be made in order to determine whether there is a need for its existence. Upon these findings the foundation for the work shall be laid.

If conditions are such as to justify that a day nursery be organized, it must be conducted with the highest standards; for through its efforts certain children may not only be physically improved, but trained in habits of personal hygiene and conduct.

It must be recognized that certain health dangers accompany the congregating of young children at an age which makes them more susceptible to contagion and infection—the larger the group, the greater the danger. The day nursery child usually comes from a home where various causes contribute to a reduced standard of sanitation and hygiene and for this reason the health problem in the nursery is of paramount importance.

REQUIREMENT FOR LICENSE.

Chapter 2337 of the Political Code provides that before establishing a day nursery in California a license must be secured from the State Department of Public Welfare, and annual reports submitted on forms prescribed by the department. As a guide to meeting the requirements for license, the following information is presented:

BOARD OF DIRECTORS—

There shall be a Board of Directors composed of a sufficient number of interested people, willing to take an active part in the management of the nursery; their number shall depend upon the size of the nursery.

STAFF—

The best nurseries are conducted under the direction of a graduate nurse—one qualified to supervise the sanitation, hygiene, preparation of food formula, and health of the children.

A sufficient number of workers of suitable age who are able physically to stand the demands of the work must be employed. They must be equipped to study the social background of nursery children, and to serve as teachers of personal hygiene.

There shall be no more than 8 infants to 1 attendant, 15 toddlers to 1 attendant, and the kindergarten teacher ought to have an assistant if she has more than 25 children.

BUILDING AND EQUIPMENT.

SIZE AND NUMBER OF ROOMS—

Playrooms. Complete segregation must be maintained between infants, runabouts, and older children. A large room, equipped with low chairs, tables, and other suitable furnishings is necessary for the runabouts. Kindergarten equipment is needed. There must also be another playroom for the older children who are cared for after school hours.

Sleeping Rooms. A sleeping room for infants as well as one for the runabouts is needed—each equipped with dark shades for the windows, metal cribs with woven wire springs, mattresses or heavy folded blankets, rubber sheeting of good quality, crib sheets and blankets. Beds shall be at least three feet apart on all sides.

Kitchen. For the preparation of the noonday meal, the kitchen must have a stove, sink, an ice box for infants' food and equipment for sterilizing nipples, bottles, etc., and for the mixing of formulae.

Laundry. Laundry facilities must be provided for the care of diapers used during the day. No soiled diapers shall be sent home with the child. The laundry must be equipped with a washing machine, boiler, wringer, stationary tubs, lines, pins, soap, etc. Towels, crib sheets and blankets may be sent to an outside laundry. Every nursery should have its own supply of diapers for the use of the children while in the nursery.

Locker Rooms. Arrangements should be made for keeping individual children's outer garments in well ventilated separate lockers where they are not in contact with each other.

Office. Space for office for the superintendent should be provided in order to have a place for conferences and space for making and keeping records.

Isolation Room. Every nursery must have an isolation room in which to place a child who becomes indisposed during the day.

Dining Room. A room to be used only as a dining room is preferable. A private dining room for the superintendent and staff is desirable.

Toilets. There should be separate toilets for boys and girls, one to every ten children and in a room partitioned off from the lavatory. Junior toilet seats are best.

Lavatories. One wash bowl to every eight children is needed. A raised bath-tub and spray are also necessary. A sufficient supply of soap, individual towels, and wash cloths, or gauze must be furnished. The use of common wash cloths, towels, combs, hair brushes, and drink-

ing cups is prohibited. Arrangements should be made for sterilization of wash cloths.

YARD—

Buildings must be removed from traffic and above ground. Ample yard space should be provided. The surface of the play yard can be dust-free by using pine chips, sand, gravel, or tan bark. Stone and asphalt do not make good play surfaces. If a portion of the yard is not shaded by trees, sheds or awnings should be provided. There must be a drinking fountain in the yard, play apparatus, adequate separate toilet facilities, and provision for play space on rainy days.

SANITATION—

All regulations for hygiene and sanitation of the state and local health departments must be rigidly observed, plumbing modern and in good order. Walls, ceilings and floors must be kept in a sanitary condition, preferably by having the surface washed. Dry dusting or sweeping should not be done while the children occupy the building. There must be adequate ventilation by means of outside doors and windows; these shall have screens.

HEATING—

The building shall be safely and adequately heated. Stoves or radiators require the protection of wire screens. All gas heaters should have an outside vent. Each room should be provided with a thermometer in order to insure maintenance of an even temperature.

FIRE PROTECTION—

All the requirements of the local fire ordinance must be met, and it is recommended that a chemical fire extinguisher be placed on every floor, that it be tested frequently and renewed at least once a year.

HYGIENE AND CARE OF CHILDREN.

ENTRANCE EXAMINATION—

Before admission every new child must have a complete physical examination by a physician designated by the nursery. A written record of the findings including a certificate of freedom from infectious disease shall be in the possession of the nursery.

MEDICAL CARE—

There should be an attending physician or service from an accredited health agency in order to provide periodic medical supervision for the group. Regular weighing and measuring are to be effected.

The person in charge should carefully scrutinize each child every morning upon admission and if signs of any ailment or disturbances are noted it shall be placed in an isolation room and kept entirely apart from the other children. The physician or health department shall be notified at once of such action. No indisposition ought to be considered too trivial for such treatment.

PROVISIONS FOR CLOTHING—

Unless the clothing on a child is thoroughly clean on admission, a suitable garment (the property of the nursery) shall be worn through

the day and every such garment shall be marked for identification unless a clean garment is provided daily.

DIET—

A physician must prescribe individual feeding formulae for infants. Bottle babies must receive their feedings on regular schedule.

All other children should have a warm and nourishing noon meal. In addition to the noon meal it is recommended that a mid-morning and mid-afternoon lunch of bread, butter and milk, and as much fresh fruit as possible be provided. Butter substitute must not be used. Menus should be kept on file.

Nursing mothers should be encouraged to nurse their babies as long as the children gain, by going to the nursery at appointed times to nurse the baby. A hot drink and comfortable quarters are a helpful provision.

All bottles and nipples shall be supplied by the nursery. No bottle or nipple shall be used a second time until it has been thoroughly scrubbed and boiled. Milk shall be kept in sealed bottles, on ice.

DAILY SCHEDULE—

A daily schedule for feeding, naps and recreation should be maintained. Schedules can be obtained from the National Federation of Day Nurseries.

ADMINISTRATION.

ADMISSIONS—

Care of nursing babies outside their own home is always to be discouraged. No babies under one year of age ought to be received at any time, and preferably none under three.

Homes of children admitted to the nurseries should be inspected before a child is accepted. In emergency cases the home shall be visited not later than one week after the child has entered. Any doubtful or dangerous conditions found in homes must be reported to the proper officers of the nursery and to the Board of Health. No child shall be cared for unless a complete knowledge of its background is obtained. Unless a nursery is to defeat the purposes for which such an organization is useful, it must know that the economic, health, social and financial status is such as to justify the parent in separating herself from the child.

FEES—

A sliding scale of fees, based on ability of parent to pay, is recommended. Those who can pay an amount equal to the actual day's cost of care for the child should be urged to do so.

RECORDS—

Records must be kept, the social data to include the following:

1. Child's name.
2. Child's age.
3. When admitted.
4. Serious illnesses.
5. Names of both parents.
6. Parents' address.

7. Occupation of each parent.
8. Nationality.
9. Earnings of each parent.
10. Entire earnings of family.
11. Religion of parents.
12. Mother's reason for working.
13. Whether widow, married, deserted or separated.
14. Number of children in family.
15. How many at work or in school.

A record of the medical examination of each child should be continuously maintained, including height and weight chart.

AFFILIATION WITH NATIONAL DAY NURSERY ASSOCIATION.

It is urged by this department that all day nurseries become affiliated with the National Federation of Day Nurseries, office 105 East 22nd street, New York City.

They publish at a nominal cost a set of record forms which cover the records required by this board; also a dietary and pamphlets helpful to the manager, nurse and matron.

RESCUE HOMES AND MATERNITY HOSPITALS.

The legislature of 1925 on the recommendation of the State Board of Health and the State Department of Public Welfare transferred the licensing and supervision of maternity hospitals from the State Welfare to the State Health Department. This change was urged because of the close relationship between the work of the Bureau of Child Hygiene and these institutions and the opportunities they offered for pre-natal and infant welfare education.

The Department of Public Welfare in making the suggestion did so with a realization that they must continue a careful check on the disposition of children born in maternity homes and so under an agreement worked out at a joint meeting of representatives of the two state boards, a plan was formulated whereby all illegitimate births and all babies leaving the institutions with persons other than their mothers, were to be reported immediately to the state department. It was agreed further that inasmuch as maternity wards in county hospitals were exempt from the license requirement and since county hospitals were frequently reached by the Department of Public Welfare, the latter should continue as the supervising agency here and finally that the Board of Health license rescue homes and pass upon equipment and facilities for care, but that the Department of Public Welfare continue as the regular visitants. This was strongly urged for two reasons, the first being the constant necessity for securing records on state aided babies, and the second, the fact that it is from these homes that children are removed for adoption or for placement in boarding homes.

From a medical aspect the well equipped maternity hospital serves as a safeguard against deaths from childbirth and gives assurance of proper care to infants. From the social aspect it gives opportunity for assistance to those mothers who require counsel and guidance both for themselves and their babies.

In 1924 the state licensed 311 such hospitals, an increase of 15 per cent over 1923. Eight of these institutions were rescue homes. This group is undertaking a useful work. It cares for young women who seek the help of the home before the arrival of their babies and remain for a long enough time after to plan for the future. They go out strong in body and spirit. Where these homes have their own facilities for maternity care, it is of a uniformly high standard. Some avail themselves of larger public hospitals where every effort is made to safeguard the mother and protect her against publicity of any sort.

For the year ending June 30, 1924, 50 per cent of the children born in these hospitals left in the care of their mothers. Of the remaining 50 per cent, 17 per cent were placed for adoption while 33 per cent were committed to the courts or institutions or were otherwise dismissed.

The utmost depth of understanding must be exercised in the handling of problems in rescue homes. The girl in difficulty is naturally reserved. She is slow to reveal her story, she is often inclined to shield her people and the father of her child. She gives a name not her own. A sympathetic person in charge accepts the story on its merits at first, but her tact, her unselfishness of purpose, her obvious desire to assist gradually bring about the confidence which must serve as a basis for a remaking of what might otherwise be a shattered life. Too much encouragement can not be given to this type of work—with constructive suggestions and assistance in case work methods. The fact that the state, through its aid fund, grants a subsidy to babies who come under the care of this group is a revelation of the attitude of sympathy and comprehension of this problem.

The department recommends that at an early date some analysis be made of admissions and dismissals from this group of institutions with a view to learning the later disposition of children born there. This must be done with the utmost consideration for the delicacy of the entire problem but with the purpose of protecting babies from possible carelessness in placement.

There is all too little interchange of ideas or discussion of policies among the directors and superintendents of these institutions; there might well be a confidential exchange maintained by them for their own group. Doubtless many a difficult problem could be more easily approached and better understood for there is reason to believe that assistance is frequently given to a young mother who has had help at a previous time from another institution and whose case history might lead to a totally different form of treatment.

C. SPECIAL PROBLEMS.

1. THE BLIND.

The state provides education, care and relief for this group according to two methods—the outdoor and the indoor method.

Under the latter are the two state institutions while the former includes assistance through the pension act of 1919 and through county indigent funds.

State Institutions.

One of these, for children, is located in Berkeley and is supervised and administered by the State Superintendent of Public Instruction. The home for adults is

THE INDUSTRIAL HOME FOR ADULT BLIND.

3601 Telegraph Avenue, Oakland.

Mr. Douglas Keith, Superintendent.

Residents June 30, 1926.....	127
Capacity	140
Total acreage	6

May be reached by Telegraph avenue street car. Telephone—Piedmont 275.
Visiting days—Daily, 9 to 4.30.

The Board has interested itself greatly in this Home. Frequent visits have been made by members and conferences held with the Superintendent. The outstanding achievement of the year has been the appointment of two vocational home teachers, one in northern and one in southern California. The workers of the department have cooperated in every way in advising and assisting in solving individual cases. The Board hopes that there may be additional teachers in the next year, so as to expand the educational work to a high plane. In the brief months since their appointment, much has been accomplished in the way of economic reconstruction of their pupils. Much ought to be achieved by way of obviating the necessity for admission of persons to the Home.

The Board sympathizes heartily with the attitude of the Superintendent that the Home shall develop as a training school rather than as a home for the custodial care of helpless blind persons. For the latter county farms ought to evolve a high order of comfortable and sanitary housing with occupations adapted to special capacities and aptitudes. This would reserve the State Home for educable blind persons who would return to their communities trained to a degree of self-support and able through the guidance of the state institution to merge into their home environment. In this group there ought also to be persons qualified to develop everywhere facilities for the advancement of the blind.

Blind Pensions.

The law of 1919 enables county governments to appropriate funds for a monthly pension of \$12.50 to any blind person in the county. The 1921 legislature increased that sum to \$15. The following counties

have made no special appropriation but provide for their blind out of the general funds:

Alameda	Glenn	Lassen
Butte	Humboldt	Madera
Colusa	Imperial	Marin
Contra Costa	Inyo	Mariposa
Del Norte	Kern	Mendocino
El Dorado	Kings	Merced
Fresno	Lake	Modoc
Mono	San Bernardino	Siskiyou
Monterey	San Diego	Sonoma
Napa	San Joaquin	Stanislaus
Nevada	San Mateo	Sutter
Orange	Santa Barbara	Tehama
Placer	Santa Clara	Tuolumne
Plumas	Santa Cruz	Yolo
Riverside	Shasta	

The following counties made appropriations in 1926:

Alameda—\$10,905, appropriation for 60 persons.
 Los Angeles—\$31,302, appropriation for 170 persons.
 Sacramento—\$2340, appropriation for one year for 18 cases.
 San Francisco—\$15,025, appropriation for 80 persons.
 Solano—\$360, appropriation for 2 persons for one year.

The following counties made no appropriation and received no applications for aid to blind up to July, 1926:

Alpine	Sierra
Amador	Trinity
Calaveras	Tulare
San Benito	Ventura
San Luis Obispo	Yuba

Effect of Pension.

The purpose of this grant has been to a large extent to curb mendicancy among the blind, to supplement insufficient wages and to give an income to needy blind persons. The expenditure has been administered to a large degree by the same officials who have charge of the state funds for children, and when subject to investigation seems to have achieved a useful purpose. It is easily subject to abuse when carelessly administered. Possibly a desirable adjustment would be to eliminate the use of the word pension and base the monthly allowance on the actual need of the applicant, making it possible to extend a sum in excess of \$15 for people in greater need.

We hope to see in the near future the establishment of two shops at central points where the articles made by all inmates of State Hospitals and Institutions, as well as by the blind, may be displayed and sold. The percentage of blind persons who can make marketable wares is large, but the difficulties of disposing of them are great and so it is hoped that our suggestion may be carried into effect. There must also be a person designated to find employment for the blind.

Conference re Blind.

The Department in the last year called a conference of all persons interested in the blind. It was anticipated that this would serve as a central council for a discussion of all blind problems. The group which assembled comprised representatives of the State Board of Health, Department of Public Instruction, the State Library, School for the

Blind, Industrial Home for the Blind, Industrial Accident Commission, and State Department of Public Welfare.

There seems a general opinion that with the appointment of additional home teachers, with the meeting at regular intervals of the council for the blind, with the emphasis of vocational training in the State School, with a systematic plan for finding employment and marketing products, California will have a well rounded program and that its efforts shall be concentrated more and more on the problem of sight conservation which shall include classes in all schools in the large centers of population.

Census of Blind.

The Department early in 1926 concluded that a census of the blind was greatly needed and so this project was carried out. The cooperation was sought of all agencies, public and private, which were in any way connected with work for this group of handicapped persons. The following form was devised which included the information which seemed essential to a comprehension of the state's problem:

STATE DEPARTMENT OF PUBLIC WELFARE.

REMARKS.

Reported by _____

Each society cooperated to the utmost; the state institutions, home teachers, and the Widows Pension Bureau were able to furnish data that was valuable in its completeness. Other organizations whose contact with the blind made a full case history impossible presented outlines varying in detail. These were followed up with letters and wherever possible with personal visits by the agents of the two departments. For instance this summer workers who were traveling in such remote counties as Siskiyou, Shasta, Nevada, Plumas, Tehama, and Lassen, made these contacts.

One of the valuable results of the census taking has been a demand for information and direction from individuals. That which we call in social work the case work method, evolved itself quite naturally and has led to treatment and study which will prove of great value in a further understanding of the problem.

The original tabulation included 2423 cases; 145 of these have been withdrawn on a more careful count, because of information which

indicated that the persons' sight was not so impaired as to include them in a census of the blind, or that they had died or left the state. This leaves 2278 persons in the present tabulation.

No statement.....	462	20.4
Totals.....	2,278	100

Under "No." were put all cases of persons over 40 years of age where no statement was made. Though this age limit is far beyond that of the usual school age, a few individuals over 30 years of age were reported as attending special schools of one kind or another.

TABLE 86.
Instruction of Blind Persons by Home Teacher.

	Number	Per cent
Receiving instruction.....	703	30.6
Not receiving instruction.....	771	33.8
No statement.....	804	35.6
Totals.....	2,278	100

"Yes" in this instance usually includes not only those individuals who at the present time are being instructed but also those who have at some previous time had instruction either by the California teachers or those of some other state. Those under "No Statement" probably represent cases not instructed by the home teachers in California who are acquainted with their former pupils, and have reported for them.

TABLE 87.
Economic Condition of Blind Persons.

	Number	Per cent
Self-supporting.....	332	16.6
Partially self-supporting.....	77	3.4
Dependent on blind pension.....	243	10.7
Dependent on other aid.....	533	25.6
Dependent on family.....	347	15.2
Independent means.....	72	3.2
Aged, no statement.....	126	5.5
No statement.....	448	19.8
Totals.....	2,278	100

"Self supporting" was apparently interpreted by some as meaning not dependent on public aid; and therefore includes some cases where persons are dependent on their families.

"Partially self supporting" were sometimes dependent on aid or on their families for additional support, but in so few cases was this indicated that no tabulation was made under those headings.

Where "dependent on aid" and "receiving blind pension" were both indicated, account was made only under "Blind Pension," as this is obviously "aid."

"Dependent on family" was written down in so many cases that it was tabulated. Since the card had no space for this, many others would probably have come under this heading had the information been asked for.

All cases of children under 16 were grouped under "dependent on family."

Blind pensions include only those that are truly such under the California law. Soldiers' widows' pensions, compensation insurance, etc. were put under "dependent on other aid."

Women under 60 whose occupation was given as housekeepers, and where no indication was given as to economic condition were counted as self supporting.

*Probably unknown to person filling out card—not to one competent to judge causes.

The census brings out strongly a need for vocational training, for the building up of opportunities for self support among the blind. Statistics indicate that 1/10 of all blind persons become so before the age of 20. Twenty per cent of those listed in our survey are under twenty-five years of age, which would designate them as trainable and yet only fourteen per cent of the group is reported as self supporting. Only 19.4 are receiving training, an all too small number. We are ready to recommend, not additional legislation but the extending and strengthening of the existing facilities of the state; the addition of classes in schools; the increase in the number of home teachers and the emphasizing in the state school of the vocational aspect of training for the blind.

2. THE AGED.

In the past decade an awakening public consciousness has become aroused to the problem of the need for care among this group. Statistics have proven that the span of life has lengthened to a noticeable degree through advances made by medical science.

Modern social conditions have tended to complicate the heretofore normal type of care of the aged members of a household. The friendliness of neighbors, the adaptability of the large old type family home is no longer possible and so there must be to a greater extent protection furnished by the state and the county.

California made a noteworthy contribution to a program in the study and report made in 1917 by its social insurance commission. Since then Massachusetts has carried on a like study. Recently a study has been made in Boston of aged clients—a first case work approach to an understanding of conditions.

For the child, interest has come in increasing volume year by year; for the aged the interest has been of an unorganized nature, some of it crystallizing into admirably equipped institutions, some leading a battle for financial help in the form of social insurance or

of pensions. In California at the present time the county is held responsible for the relief of the aged indigent. County poor farms and hospitals are providing custodial care for residents of advanced years. Private philanthropy, fraternal and religious organizations are maintaining a goodly number of homes, and private boarding homes run on a commercial basis present an alternate provision for care.

For some years the conviction has been growing that the two last mentioned groups, desirable as they were in their best development carried potentialities of serious neglect or abuse if permitted to continue without some form of public supervision.

License for Homes of Aged.

Accordingly in 1925 the Department of Public Welfare Act was made to include a provision for aged persons which was similar to that for children.

It called for the licensing of institutions and homes and placed upon the state department the responsibility of making investigations and formulating such "rules and regulations" as might be deemed best for the government of such institutions.

Inspections of Homes for Aged.

In September of 1925 the agents of the Welfare Department started their inspections. They proposed to attempt gradually to raise the standard of care to that level which spelled a normal measure of comfort. It was not felt that all homes could be expected to provide the degree of luxury found in certain of the established homes and yet it was necessary to insure clean sanitary living conditions with those facilities for bodily care, recreation and diversion which mean contentment and relaxation from the ardors of middle life. Sixty-five was set as the age at which a client might be classed as aged. The state was anxious also to give the aged a sense of financial security in cases in which they were paying money for life care. With this in mind a bill was introduced in cooperation with the insurance commissioner, which gave the latter power to demand that any society, corporation, institution or association which receives grants of property, real or personal, conditioned upon its agreement to pay an annuity to the grantor shall establish and maintain a reserve fund in accordance with certain established standards.

Financial Security.

This provision immediately led to a study of such institutions as accepted lump sum payments. One was found to be in serious financial straits. The combined influence of the findings of the insurance commissioner and of the state department made possible the closing of the home, and led to filing of suits to recover the moneys paid over by inmates. A detailed case study brought out the possibility of placing a number of them with their own people. Some were transferred to the county home—new and admirably equipped and a far more comfortable haven than the institution had been.

Especial care has been taken to check on the fire hazard on all this group of homes—no license has been issued unless a fire safety bureau

has given its approval of the plant. Due to this requirement a number have installed devices for fire protection, additional stairways have been built, fire extinguishers installed, elevators lined with metal and waste removed.

A careful study is to be made of dietaries with a view to having them meet all nutritional needs. To date no effort has been made to study the problems of individuals, but ultimately this might well be a contribution of the Department for only through this means can a stable method of public care be evolved.

Convalescent Homes.

We are constantly confronted with the question of whether we shall be expected to exercise jurisdiction over convalescent homes, as well as those for the aged, but it has been determined that we confine ourselves to those caring for people sixty-five years old or over.

In cases where the population is made up of two types, the mental and the aged, an agreement has been reached whereby the department of institutions, which must license all homes for the mentally incompetent, shall file reports with the department of public welfare and thus eliminate any duplication of inspection. Excellent cooperation has been effected between the State Board and local departments so that a uniform system of supervision by only one office is in effect.

A list of the institutions in active operation and licensed by the Department of Public Welfare follows. A number of others are under consideration and are being remodeled or reorganized to meet requirements.

STATE OF CALIFORNIA
DEPARTMENT OF PUBLIC WELFARE
State Capitol, Sacramento

REFERENCE FOR LICENSE—CARE OF AGED

has applied to the State Department of Public Welfare for a license to board aged people in her home and has given your name as a reference. We would be grateful if you would give us a confidential report on this home, answering the following questions and giving any additional information which would be helpful to us.

How long have you known the applicant?-----

Do you consider her a reliable and responsible person to care for aged people?-----

Has she boarded them before?-----When?-----Where?-----

Is her housekeeping of such a standard that you would be willing to place a person to whom you are related in her home?-----

Are you confident that she will be kind to any one placed with her?-----

Will she give proper medical attention?-----

Do you know of any reason why her home might not prove a suitable one?-----

Comment: -----

Will you kindly reply by return mail in order to expedite action on this application?

(Signature)-----

Very truly yours,

STATE DEPARTMENT OF PUBLIC WELFARE.

3. INDIANS.

The Indian population of California is estimated at 17,000. A number of valuable surveys of their living conditions have been made. All lead to one conclusion, that somewhere, because of the intricacies of jurisdiction, there has been a serious neglect of their health, education and general well-being.

The Indian Defense League, a national organization, has worked aggressively with the federal government to fasten responsibility where it belongs and to protect the Indians against injustice.

The Department of Public Welfare has been asked on numerous occasions to furnish data in California regarding this group and outline the state's interest in their behalf.

The Department has come to the conclusion that it is important to demonstrate to the social service units of the state that the Indian is an ordinary but much neglected social problem.

Care of Children.

The state in its dispensation of orphan aid has never made the slightest discrimination against Indian children. In 1924 a census was taken of those receiving the state subsidy. There were found to be approximately 400 half-orphans. This out of a population of seventeen thousand is a fair proportion.

The state is subsidizing in Amador County an interesting home for Indian children, all of them without a mother and coming from surroundings which were unfit properly to safeguard them. Definitely good results are coming from this small enterprise. It is interesting to know that the Amador School Department has in cooperation with

the federal government turned over to this institution a regular school subsidy available for the education of Indian children, in spite of the fact that these children are in attendance in a public school.

In Banning there is an excellent orphanage for the care of Indian boys and girls. This is under the jurisdiction of the Franciscan Brothers and is eligible to assistance from the state. Mention must also be made of the effective work carried on among Indians by the Dominican Sisters in Mendocino County. It is a work of self-sacrifice and understanding with much intense human interest.

Medical Care.

The situation as to county hospitals is one that warrants intensive study and propagandizing. In some of them there is a strong feeling of objection to accepting Indian patients. A wretched story of neglect was brought to us last year by one of our agents. The story of a child so racked with tuberculosis that he was pitiable and yet the county hospital had refused his admission. As a consequence he was **dragged** about the country side and even brought to one of the public ceremonials where, the story goes, he was quieted with constant contributions of ice cream cones and the like, which he left unfinished and which were later finished by the children playing about him.

The census in 1924, directed to county hospitals, told of care in institutions of Indians in the following counties: Alpine, Amador, Calaveras, Contra Costa, El Dorado, Fresno, Kern, Kings, Madera, Marin, Mono, Orange, Placer, Sacramento, San Benito, San Bernardino, San Diego, San Joaquin, and Trinity, but the process of admission is always a difficult one and there is not always assurance that the patients, on admission, are as kindly treated as they should be.

The whole situation calls for carefully planned constructive social service. We are very much interested in the bill presented to congress which practically decentralizes Indian work and places the responsibility in the hands of the states. Such a plan would lead to district surveys and case work which will place social service to Indians on the plane of social work for other races.

Committee on Indian Relief.

Within the last months a committee has been functioning which is devoting itself to a discussion of problems of relief of Indians. It is made up of representatives of the Federal Indian Bureau, State Board of Education, State Board of Health, State Department of Public Welfare, State Federation of Womens' Clubs, Parent-Teacher Associations, the Catholic and Protestant churches, the California State Conference of Social Work and the Indian Defense League.

The committee does not plan to act as a relief giving agency, but to serve as a clearing house for relief problems and to refer them to the proper agencies. All organizations which have an interest in or legal responsibility to Indians have been notified of the existence of the committee and asked to cooperate with them. It hopes to focus responsibility where it rightly belongs and alleviate some of the misery known to exist. It is building up a contact with the federal agents which can not but react beneficially.

SECTION III.

DELINQUENCY.

California as a state has several definite responsibilities in the care of delinquents. The institutions of the state caring for this group have been the object of special consideration by the Department of Public Welfare during the past two years. The members of the Board and its agents have made many visits and have been in constant touch with the heads of these institutions.

These include—

- 2 state prisons,
- 3 state schools for juvenile delinquents,
- All county and city jails,
- 29 detention homes,
- 6 private institutions for delinquent children,
- 10 institutions which combine the care of the dependent and delinquent.

The prisons come directly under the administration of the Board of Prison Directors, the schools come under the State Department of Institutions. In all these institutions the State Department of Public Welfare has duties which are outlined in Section 2333 of the Political Code as follows:

“The department is hereby authorized and empowered and it shall be its duty as a whole, or by committee, or by its secretary, or other agent, whom it may authorize to investigate, examine and make reports upon the charitable, correctional, and penal institutions of the state, including the state hospitals for the insane, of the counties, cities and counties, cities, and towns of the state, and such public officers as are in any way responsible for the administration of public funds used for the relief or maintenance of the poor. All the persons or officers in charge of or connected with such public institutions, or with the administration of said funds, are hereby required to furnish to the board or its committee or secretary such information and statistics as they may request or require, and allow said board, committee or secretary free access to all departments of such institutions and to all of their records. In order to secure accuracy, uniformity, and completeness in such statistics and information, the department may prescribe such forms of report and records to be kept by all persons, associations, or institutions subject to the provisions of this chapter, other than those public institutions for which a different form has been or may be prescribed by the Department of Finance, and it shall be the duty of each of such persons, associations, or institutions to keep such records and to render such reports in conformity to the forms so prescribed; provided, however, that, so far as the same may be applicable there shall be incorporated in such forms the information and data which is now or may hereafter be required to be contained on the records and reports of the several state hospitals. All plans of new buildings, or parts of buildings, for any of the public institutions coming under the provisions of this section, or any additions or alterations in such buildings, shall,

before their adoption by the proper officials, be submitted to the board for suggestions and criticism."

Section 2345 gives the Board jurisdiction in county jails, and makes it the duty of the State Department of Public Welfare to prescribe forms of record for the use of the Superintendent of County Hospitals and Almshouses, and jailers in charge of county jails and city prisons.

Jurisdiction over the planning of the construction of county jails was in 1925 transferred by the Legislature to the State Commission of Housing and Immigration.

A further requirement which brings the Board at close range with problems of delinquency is found in Section 1203 of the Penal Code which reads:

"Every probation officer, within fifteen days after the thirtieth day of June, and within fifteen days after the thirty-first day of December, of each year, shall make in writing and file as a public document with the county clerk a report to the superior court of the county or city and county in which such probation officer is appointed and shall furnish a copy of such report to judge in said county or city and county who has released any person on probation who at the time of such report remains on probation; and a further copy to the secretary of the State Board of Charities and Corrections. Such report shall state, without giving names, the exact number of persons, segregating male and female, and segregating misdemeanors and felonies, who have been released on probation to such probation officer as such number exists, deducting all cases of expiration, discharge, dismissal, and restoration of rights, on said thirtieth day of June and said thirty-first day of December; and such report shall further segregate such persons as having been released on probation, as the case may be, in 1903, 1904, 1905, and so on up to and including the calendar year in which such report is made and filed."

STATE PRISONS.

Appropriations for Permanent Improvements, Seventy-seventh and Seventy-eighth Fiscal Years.

San Quentin State Prison:

Construction of cottage for employees.....	15,000
Women's building and equipment.....	142,000
Laundry building	32,000
Industrial equipment and repairs.....	50,000
Complete cell block	168,000
Total	\$407,000

Folsom State Prison:

Farm buildings	7,500
Wall derricks and equipment.....	5,000
Steam boiler	5,000
Post office	1,000
Repairs	14,000
Total	\$32,500

In the state penitentiaries there are now 5035 prisoners, Folsom having 1734 and San Quentin 3301. At San Quentin there are about 80 women prisoners. In addition to these San Quentin has 1725 and Folsom 350 prisoners on parole. As an instance of the value of this parole work (taking the record of July, 1926) there were only nine violations of parole among the San Quentin prisoners and one among the Folsom prisoners, while the earnings of the men on parole from

San Quentin totaled \$148,088.85, and the sum earned by the men from Folsom amounted to \$31,090.95 during the same month.

A large number of improvements have been made at the prisons, some of which are completed, and others are in course of construction.

SAN QUENTIN.

The place known for so many years as "Crazy Alley" has been abolished and the prisoners sent to state hospitals where they will receive the care necessary for the insane.

For many years the prisoners have had to stand in line, exposed to the weather, at all seasons of the year, while waiting to go into the dining hall, but a large steel shed is now being erected which will protect them from the rain.

The "New Cell Block" whose walls have been standing unfinished for many years is now being completed, and by the beginning of 1927 will be ready to house 800 men, which will greatly relieve the crowded condition at San Quentin. The present congested conditions have been so serious that the mere question of bodily comfort and custody has to a degree eclipsed the equally important subject of reeducation, and training facilities.

The present women's building was and is overcrowded but a new building is now in course of construction which will take care of 120 women prisoners and will be ready in the course of a few months.

This new building has a room for each prisoner, a hospital ward of eight beds, a special room for those who are seriously ill, nurses' rooms, operation and anaesthetic room, tub and shower baths, recreation, and industrial halls, dining room for prisoners and for employees, reception quarters, offices, etc., and will be surrounded by a garden where the women can exercise and work; in fact, there will be every facility for taking proper care of the women prisoners.

We have followed with great interest an outstanding service given Folsom Prison by the County Librarian of Sacramento. Her activity started with the establishing of a branch library in the penal institution. The mere giving of books, however, did not satisfy a woman interested in the problems of human development. She found herself directing her readers along new lines of thought; supervising courses of study and of training; replying to letters requesting information on many phases of thought. The prison authorities showed her every courtesy and the work has expanded into an important factor in the reformation of many a man and made him better able to resume his position in the community to which he returns. This enterprise ought to serve as a foundation stone for a revised process of education in the state prisons.

There is great need for a standardized system of teaching in our prisons and for a well rounded plan for vocational training in occupations that may be a source of income not only to the institutions but to the inmates.

Payment to the women for their handwork is in effect. This ought to be enlarged and systematized so that it shall take the form of trade instruction and shall furnish the other state institutions with some needed commodity for which the worker is recompensed.

The remarkable example set in the prison road camps is an accomplishment of which progressive penologists are taking cognizance. Its

effect is far-reaching; the convict gains in self-respect since he is self-supporting and contributing to his dependents. He is shortening his term of imprisonment and is living a normal, outdoor existence. In the coming years the value of this plan will be recognized to a great degree. Our prisons will be schools for the rebuilding of character and body. It is hoped that 1000 to 1200 men may ultimately be employed in this way.

COUNTY JAILS.

It is a matter of regret that reports have been received from only 38 of the jails (and some of these are far from complete), in the state. In 1916 the Board of Charities and Corrections made an intensive survey of county jails; since then agents as they have made their surveys, have included the jail. No far-reaching changes have taken place. As a rule the jail buildings in counties are poorly planned; maintenance is unsatisfactory. The county takes no great pride in its upkeep—too many inmates are nonresidents, transients in whom the community has no special interest. There is no effort to furnish any form of occupation and yet here is an opportunity for utilizing the services of men who would be greatly benefited by such a policy.

It is true that the function of the jail is primarily one of transitory care but the jails ought like the state prisons to be an important adjunct to a state plan for crime deterrence and human readjustment. Without complete records this is made more difficult.

In the Statutes of 1921, page 1615, there is a law under which men confined in county jails may be put to work on an industrial farm or road camps may be established for the purpose of providing occupation. The provision under which they are maintained is outlined.

The only county known systematically to take advantage of this provision is San Bernardino where road repairing and some building is accomplished with the help of jail inmates. Siskiyou employs some of its men as helpers at the county infirmary. The county physician reports his complete satisfaction with the operation of this plan.

One alarming fact which our statistics have brought to light is the large number of juveniles confined in jail. In June of 1924, 1609 such cases were reported; in 1925, there were 1869; in 1926, there were 2143. Section 64 of the Juvenile Court Law says:

“No court, judge, magistrate or peace officer shall commit a person under 16 years of age to any jail or prison, before trial and conviction, or detain such person therein, but if any such person is not released pending such hearing, he may be committed to the care and custody of a sheriff, constable or other peace officer who shall keep such person in a detention home or some other suitable place outside of the enclosure of any jail or prison as the court may direct.”

In the coming year the Board will bend every effort to see that this provision is enforced. Properly supervised detention homes, and the furtherance of a county opportunity or adjustment school program will be invoked to meet the problem.

The necessity for crowding men and women who may be first offenders in close contact with advanced criminals carries with it consequences of a far-reaching nature. The diseased and the morally perverted are sources of contamination and yet the jails which have proper

facilities for their segregation are few in number. Sonoma, Kern, and Orange counties have quarters so clean and well arranged that they may serve as models. Table No. 96 shows that of a total of 42,932 were discharged from county jails in year ending June 30, 1924. 8320 or almost one-fifth served out their terms in jail without further commitment. In 1926 there were 10,253. This figure itself might be a challenge for a reconstruction program. Seven hundred eighty were taken to state hospitals, a fact which proves immediately the necessity for proper quarters for temporary detention of mental cases.

All available statistics indicate a greater number of inmates in jail year by year. From 1917 to 1926, there is an increase of approximately 1600. The enforcement of prohibition and the confinement of offenders against federal laws doubtless contribute to this figure but no argument could be more potent for the improvement of quarters and methods of confinement.

STATE SCHOOLS.

PRESTON SCHOOL OF INDUSTRY.

Waterman, Amador County, California.

Date of opening, 1893.

STAFF:

O. H. Close-----Superintendent
T. E. Morrin-----Assistant Superintendent
Leonard Woods, M.D.-----Physician and Surgeon

Seven teachers.

Number of boys in school June 30, 1926, 574. Capacity 500.

Number of employes—men, 92; women, 38. Total, 120.

Total acreage 725.

School reached via Galt from Sacramento and San Francisco.

Telephone Ione 17-W.

Visiting day—every day.

WHITTIER STATE SCHOOL.

Whittier, Los Angeles County, California.

Date of opening, July 1, 1891.

STAFF:

Fred C. Nelles-----Superintendent
W. A. Smith-----Business Manager
Herbert E. Tebbetts, M.D.-----Physician
Ellen B. Sullivan, Ph.D.-----Director of Research

Number of inmates—boys 320.

Number of employes—men, 67; women, 26.

Total acreage 204.

Located on Los Angeles county highway. May be reached by Pacific Electric or stages from Los Angeles

Telephone Whittier 12.

Visiting days for public—Thursdays, 1 to 4 p.m.

For relatives of boys—Saturdays, 1 to 4 p.m. Sundays, 9 to 4:30 p.m.

VENTURA SCHOOL FOR GIRLS

Ventura, California.

Date of opening, June 25, 1916.

STAFF:

Olive P. Walton, M.D.-----Superintendent
 Mabel T. Bell, M.D.-----Resident Physician

Number of inmates—girls 172. Capacity 185.

Employees—men 8, women 50. Total 58.

Acreage 125.

Located two and one-half miles north of Ventura. May be reached by auto from
 Ventura.

Telephone Ventura 135.

Visiting day—Daily for public, 1 to 5 p.m.; Sundays for relatives.

**Permanent Improvement Appropriation, Seventy-seventh and Seventy-eighth
 Fiscal Years.**

PRESTON SCHOOL OF INDUSTRY:

Furnishings for superintendent's apartment-----	\$1,500
Shop machinery and equipment-----	3,000
Live stock-----	2,000
Tailor shop and sewing room-----	8,000
Farm cottage-----	10,000

Construct special custodial building, service connections, furnishings and equipment for same-----	200,000
Total-----	\$227,000

WHITTIER STATE SCHOOL:

Remodel present hospital and Lost Privilege building-----	\$10,000
Eake shop-----	6,000
Storage for oil and paints-----	1,500
Cottage for farm foreman and engineer-----	7,500
Auto shelter shed-----	1,000
Laundry and mechanical shop equipment-----	10,025
Repairs, improvements and equipment to old buildings-----	15,000
Total-----	\$51,025

CALIFORNIA SCHOOL FOR GIRLS:

Repairs and equipment to ice plant-----	\$6,200
Improvement of roads-----	9,200
Total-----	\$15,400

Preston School houses the older and more difficult boys; Whittier State School receives boys under 16, and the Ventura School cares for delinquent girls. On June 30, 1924, a total of 930 inmates were enrolled. On June 30, 1926, this number reached 1065.

The three institutions have developed a cottage plan of housing.

At Preston a central building remains in use with a large group of boys housed on the fourth floor. The Department of Public Welfare strongly recommends the removal of all boys from the fourth floor, and the placing of the hospital on the ground floor instead of on the third floor where it is at present. All the new accommodations are small homes more closely akin to family grouping.

Whittier has developed in its home cottages a model type of housing, sanitary and attractive, with excellent facilities for segregation and supervision.

The Ventura cottages are well arranged and pleasing, with a central living room, dining room and kitchen adapted to the capacity of each house.

All these schools have achieved a high standard, due largely to the ability and ideals of their superintendents whose annual statements are

found in the report of the Department of Institutions. Education is considered an important feature, with vocational training of various types to supplement the academic training. Preston has a tailoring and plumbing shop, a printing plant, agricultural occupations, cabinet work, blacksmithing, oil firing, auto mechanics, sheet metal work, and an excellent band. Whittier maintains a printing, tailoring and shoe shop, trains in auto mechanics, cooking and baking, mattress making and farm work. It also has a well organized band. Research of a high order is in effect and is made a basis for adjustment of the boy to the school and his return to his home. Many intensive studies of problem boys have been carried on which are fine contributions to a general understanding of the larger problem of juvenile delinquency.

The publication of the *Journal of Delinquency* "devoted to the scientific study of problems related to social conduct" continues.

Ventura gives instruction in weaving, dressmaking, sewing of all types, and housekeeping. In the hospital a group of girls is given instruction in elementary nursing.

Two factors are contributing to the seriously crowded conditions in the boys' schools; the natural increase in population and the temptations which modern society offers to the growing young. Both boys' schools are filled to capacity, but there is every hope that the budget of the approaching biennium will offer a solution to these difficulties.

The State Department recently called into conference the heads of the State Schools and the Superintendent of Sonoma Home. The purpose was to discuss many problems of mutual interest and to outline measures for the reclassification of admissions. It was agreed that only boys and girls with an intelligence quotient of seventy-five and over are to go to Whittier and Ventura, those below this figure to go to Sonoma. Preston is to make provision for the defective delinquent. The exchange of pupils was to be effected at once. The immediate result has been to raise the level of education in the State Schools.

Provision is made in the law for the appointment of parole officers for the state schools. At the present time Preston has 530 boys, Whittier 210 boys, while Ventura has 148 girls on parole. All the schools report the violators of this privilege to be few in number, and all are heartily in accord with an extension of the service. The number of cases carried by the officers should not be too great. Opportunity should be given for intensive work with individuals where the problem warrants it. Every case ought to be visited once a month, with the relationship between parolee and officer so close that more frequent contacts are possible.

To the boy or girl leaving the protection of a state school where routine is inflexible, the first weeks of freedom are the most difficult. Once their dangers have been encountered and overcome the path is easier. Reestablishment in a community brings temptations and distractions; the parole officers must be vigilant and apprehensive of their charges; they must be sufficient in number and with such understanding that they can be ever ready to meet and deal with the emergencies which are bound to arise.

PRIVATE SCHOOLS FOR DELINQUENTS.

There are six such schools in the state, three for boys and three for girls, with a maximum population of 1183 in 1926. A number of orphanages admit the child not too advanced in delinquency. All these institutions ought to have as their basic principle the deterring of delinquency; otherwise their effort is futile. Any institution which serves only as a place of custody for maladjusted children is carrying out an incomplete program. The time of sojourn in a home of this type ought to be only one page in a complete program, which ought to include a study of the causes of the child's dereliction, of the part family background and history may play, of whether ill health or physical defect, or mental deviations have contributed. It is true that the immediate contribution of the institution must be in intensive form, the highest that modern methods can formulate. It must build for the future, not only for the boy or girl, but for the environment to which he is to return.

These private institutions, where a contest is being waged against the advance of delinquency, are sometimes regarded as intermediaries to the state institutions. The success of the private institution is often gauged by its effectiveness in keeping young offenders out of state schools. This may be just to some degree, but the true criterion is the complete study, made in after years, of the career of the youth, and a thorough understanding of his surroundings and of all the causes that brought about a later commitment, if this becomes necessary.

SECTION IV.

MENTAL DISEASE AND DEFICIENCY.

The state's institutions for the care of the feeble-minded and the insane are administered by the Department of Institutions in conjunction with the State Board of Control, while the State Department of Public Welfare has supervisory duties under Section 2333 over state and county institutions. In the statutes giving jurisdiction over boarding homes and institutions for children, the State Department has administrative duties in those homes in which juvenile defectives are placed.

The state maintains—

6 hospitals for the insane,

1 home for feeble-minded with a second in process of construction.

STATE HOSPITALS FOR THE INSANE.

AGNEWS STATE HOSPITAL.

Agnew, Santa Clara County, California.

Date of opening, 1888.

Resident Officers:

Leonard Stocking, M.D.	Medical Superintendent
E. W. Mullen, M.D.	First Assistant Physician
J. A. Cutting, M.D.	Assistant Physician
M. C. Hawley, M.D.	Assistant Physician
Robert E. Kershaw, M.D.	Assistant Physician
E. A. Stevenson, M.D.	Assistant Physician

Number patients June 30, 1926: Men, 1005; women, 841. Total, 1846.

Capacity: Men, 854; women, 637. Total, 1491.

Total number of employees, 227.

Per capita cost 1925-1926, \$272.28.

Acreage 498.87. May be reached by Southern Pacific.

Visiting hours, 9-4 daily.

Telephone, San Jose No. 1728.

MENDOCINO STATE HOSPITAL.

Talmage, Mendocino County, California.

Date of opening, 1893.

Resident Officers:

Donald R. Smith, M.D.	Medical Superintendent
R. O. Le Baron, M.D.	First Assistant Physician
A. E. Kiser, M.D.	Assistant Physician
Elizabeth Toock, M.D.	Assistant Physician
S. H. Babington, M.D.	Assistant Physician

Number patients June 30, 1926: Men, 740; women, 386. Total, 1126.

Capacity: Men, 638; women, 383. Total, 1021.

Total number of employees, 187.

Per capita cost 1925-1926, \$289.81.

Total acreage of grounds, 1022.32.

Hospital may be reached by Northwestern Pacific Railway from Sausalito to Ukiah, thence to Talmage by auto, three miles.

Telephone No. 18.

Visiting hours, 12:30-2:30 daily.

NAPA STATE HOSPITAL.

Imola, Napa County, California.

Date of opening, November, 1875.

Resident Officers:

G. W. Ogden, M.D.	Medical Superintendent
C. A. Johnson, M.D.	First Assistant Physician
J. E. Charlesworth, M.D.	Assistant Physician
E. F. Donnelly, M.D.	Assistant Physician
Lena G. Miller, M.D.	Assistant Physician
R. M. Ritchey, M.D.	Assistant Physician
J. B. Rogers, M.D.	Assistant Physician

Number patients June 30, 1926: Men, 1508; women, 1337. Total, 2845.

Capacity: Men, 1531; women, 1336. Total, 2867.

Total number of employees, 363.

Per capita cost 1925-1926, \$227.12.

Total acreage of ground, 1906.

Hospital is one and one-half miles from the city of Napa, and may be reached by electric road from Vallejo to hospital, or by auto stage.

Telephone No. 249.

Visiting days: Every day in the year. Hours: 10 to 12 m.; 2 to 4 p.m.

NORWALK STATE HOSPITAL.

Norwalk, Los Angeles County, California.

Date of opening, February 15, 1916.

Resident Officers:

Edwin Wayte, M.D.	Medical Superintendent
Melvin J. Rowe, M.D.	First Assistant Physician
Mary V. Church, M.D.	Assistant Physician
Phillips J. Tunnel, M.D.	Assistant Physician
Fletcher J. Van Meter, M.D.	Assistant Physician
W. H. Worley, M.D.	Assistant Physician

Number patients June 30, 1926: Men, 658; women, 588. Total, 1246.

Capacity: Men, 715; women, 627. Total 1342.

Total number of employees, 189.

Per capita cost 1925-1926, \$266.92.

Total acreage of ground, 337.71.

The hospital is one and one-third miles north of Norwalk; four and one-half miles south of Whittier; fifteen miles from Los Angeles. It may be reached by Whittier boulevard and Telegraph road.

Telephone, Downey No. 1121.

Visiting days: Monday, Wednesday and Saturday. Hours: 2 to 4 p.m.

SOUTHERN CALIFORNIA STATE HOSPITAL.

Patton, San Bernardino County, California.

Date of Opening, August 23, 1893.

Resident Officers:

G. M. Webster, M.D.	Medical Superintendent
S. F. Pond, M.D.	First Assistant Physician
Mary E. Beall, M.D.	Assistant Physician
H. S. Blossom, M.D.	Assistant Physician
E. W. Meyer, M.D.	Assistant Physician
C. M. Traver, M.D.	Assistant Physician
Pearl S. Waters, M.D.	Assistant Physician
F. F. Williams, M.D.	Assistant Physician

Number patients June 30, 1926: Men, 1492; women, 1138. Total, 2630.

Capacity: Men, 1297; women, 1185. Total, 2482.

Total number of employees, 326.

Per capita cost 1925-1926, \$231.82.

Total acreage of grounds, 456.08.

The hospital is six miles out of San Bernardino, and may be reached by Santa Fe and Pacific Electric trains, or by bus.

Telephone, San Bernardino No. 933.

Visiting days: To see patients, 9 a.m. to 4 p.m. every day. Sunday visiting limited to immediate relatives. To inspect wards each week day, 2 to 4 p.m.

STOCKTON STATE HOSPITAL.

Stockton, San Joaquin County, California.

Date of opening, April 30, 1851.

Resident Officers:

Fred P. Clark, M.D.	Medical Superintendent
Margaret H. Smyth, M.D.	First Assistant Physician
Winifred Biethan, M.D.	Assistant Physician
F. J. Conzelmann, M.D.	Assistant Physician
Grace McCoskey, M.D.	Assistant Physician
A. H. McLeish	Assistant Physician
F. S. Marnell, M.D.	Assistant Physician
S. P. Tuggle, M.D.	Assistant Physician
N. E. Williamson, M.D.	Assistant Physician

Number of patients, June 30, 1926: Men, 1842; women, 1175. Total, 3017.
 Capacity: Men, 1630; women, 957. Total, 2587. Number of employees, 350.
 Per capita cost 1925-1926, \$240.94. Telephone No. 2135.
 Total acreage: Hospital, 1,204.66; Sherman Island, 350. Total 1,554.66.
 Visiting days: Monday, Wednesday and Fridays. Hours: 9 to 11.30 a.m., 2 to 4 p.m.

Permanent Improvements Appropriation, Seventy-seventh and Seventy-eighth Fiscal Years.

Agnews State Hospital:

Improvements to water, fire and electrical systems	\$9,750
Reconstruct and complete buildings	19,800
Improvement of roads	1,000
Construct building for male employees	61,000
Equipment for building for male employees	7,000
Total	\$98,550
Construction and furniture building for patients	87,500
Totals	\$186,050

Mendocino State Hospital:

Construct and equip boiler house	\$49,000
Construct and improve farm buildings	8,500
Remodel basement for patients and employees	4,000
Concrete pipe line at farm	1,200
Four cottages for patients	132,000
Equip and furnish same	15,000
Iron guards for radiators in wards	500
Special custodial unit and equipment	150,000
Total	\$360,200

Napa State Hospital:

Construction nurses' home	\$25,000
Construction farm building and blacksmith shop	8,500
Oil pipe line	8,000
Water supply	7,500
Investigate water supply Rector Canyon	5,000
Total	\$54,000

Norwalk State Hospital:

Construct three (3) buildings	\$400,000
Furnishings and equipment for same	48,200
Lighting system	2,000
Septic tank	8,375
Smokestack	5,400
Poultry plant	5,000
Total	\$468,975

Southern California State Hospital:

Completion, east and west wing	\$170,000
Equipment, east and west wing	2,500
Equipment, fire protection	1,000
Imhoff tank	25,000
Remodeling ward 10 and employee's quarters	37,000
Total	\$235,500

Stockton State Hospital:

Repairs and equipment to power and water systems	\$43,550
Repairs to building	18,000
House for farm hands	8,500
Repairs to roads and streets	27,000
Fire escapes	12,000
New cottages and equipment	110,000
Total	\$219,050

HOSPITALS FOR THE INSANE.

During the past two years, many visits have been made and the Welfare Department members have cooperated with Medical Superintendents to increase the usefulness and effectiveness of the state institutions.

It is significant of the change in the approach to this subject that those institutions having care of the mentally afflicted are no longer designated as "mad houses" nor even as "asylums," but are now known as hospitals, indicating the hopeful view that they are places where the patient is taken for treatment with a view to his eventual restoration to normality.

The Department of Public Welfare has been in close touch with these hospitals through the frequent visits of its members and agents during the past two years. It will be interesting to note the developments at the different hospitals during this period.

Agnews.

The allotment for Agnews in the present biennial period was \$311,050, and covered improvements to water, fire and electric systems; reconstruction of present buildings; improvements to roads about the grounds of the institution; a new cottage with a capacity of 80 female patients and a new building for employees. These new buildings are of the same general exterior design as those formerly erected, being of fireproof construction with tiled roofs.

In the case of the employees' building the policy has been established that as new buildings are erected for patients in the state hospitals additional provision shall be made for employees and a new design has been worked out by the Division of Architecture, with the approval of the Board of Control and the Department of Institutions, which has met with general satisfaction, and will add greatly to the comfort and convenience of the employees. This plan provides a series of one-room "apartments" in groups of three on a floor, with outside entrance to each group and with bathing facilities for each room. This plan eliminates waste space for halls and corridors and permits the use of the building either for single attendants or married couples.

In addition to the construction program, a tract of 178 acres of excellent farm land has been purchased within two miles of the hospital. This will give much-needed land for the production of fruits and vegetables; it will be in line with the policy to make each hospital as nearly self-supporting as possible and it will provide additional means for giving patients occupational therapy.

Mendocino.

The sum of \$360,200 is being expended at Talmage during the current biennium for the construction of a power house, the improvement of farm buildings, the development of water, the erection of a finely equipped receiving and psychopathic hospital, the building and equipment of two cottages for women patients, and the establishment of a separate unit for those patients requiring special custodial care.

In conformity with the recent policy, all these structures are two-story, concrete buildings with tiled roofs. They are fireproof, with numerous exits, and have modern bathing facilities, with exposed plumbing and excellent ventilation in the bed rooms, dining rooms, and sitting rooms.

Napa.

A new home for nurses, the erection of farm buildings, a blacksmith's shop, the construction of an oil-pipe line and the development of the water system are among the recent developments and improvements at Napa State Hospital.

It has been decided to group the tubercular patients of the northern section of the state at this hospital, and recommendations to this end are being made for the next biennium.

The delightful climate of Napa, neither too hot nor too cold, and the absence of fog and winds, render it particularly suitable for patients suffering from this disease.

After very careful study and consultation with all the medical superintendents, the Department of Institutions, the Board of Control and the Department of Public Welfare, a new design for a tubercular unit is being worked out by the Division of Architecture, which will provide for the segregation of the different stages of disease, both mental and tubercular, it is hoped that when completed this new plan will set a standard for the entire country for this type of building.

Norwalk.

Due to the fact that Norwalk had the smallest patient population and also on account of its proximity to a large center of population in Los Angeles, much attention has been given to the development of this institution. Four new cottages for patients have been completed during the present biennium (two for men and two for women). An industrial building, where shoemaking, weaving, basket making and furniture making are carried on, has been completed, greatly to the advantage of the patients and the institution. In addition to these buildings a very fine receiving or psychopathic building, two stories in height and 400 feet in length, has been just finished and completely equipped. It will afford opportunity for research work and will undoubtedly serve the purpose of giving temporary treatment to patients often restoring them to normal mental health, and avoiding the necessity for their being detained permanently in the hospital.

Southern California State Hospital.

In 1923 an earthquake seriously damaged two three-story wings of the main building at this institution, making it necessary to have them dismantled. To take their place, four emergency cottages were constructed in the orange groves near Highland avenue, which have proved very serviceable, and have answered the purpose for which they were designed in an efficient manner. While they were put up rapidly and are not of fireproof construction, they are one-story buildings, with

many exits, wide corridors, broad verandas and screened sleeping porches, making them very desirable as residences for certain types of patients. During the past year two new concrete wings, two stories in height, have been completed, and another two-story concrete building is now being erected. Bungalow quarters have been built for a large number of employees, and a new Imhoff tank to take care of the institution's sewage has just been finished.

The tubercular unit for the southern section of the state will be established at Patton, which has an elevation of 1400 feet and is eminently suitable in every respect for the treatment of this class of disease. The same type of construction will be used at Patton as at Napa.

Stockton.

The present biennium has seen numerous developments at Stockton. In addition to extensive repairs to buildings and streets, power and water systems (made necessary by the age of this institution), and additional provision for fire escapes, two large cottages for patients each accommodating 160 and one smaller cottage housing 80 patients have been erected at the farm, about $3\frac{1}{2}$ miles from the center of Stockton. This gives a total of 500 patients at the farm in addition to a large attendants' cottage. A kitchen-commissary-dining room building and a power house are also being constructed and are rapidly approaching completion. With a farm of approximately 1400 acres this new development will give healthful, out-door exercise and employment to many of the patients, which will prove very beneficial to them. These new buildings also serve to relieve the congested conditions at the main institution and it is hoped that with the erection of two more patients' cottages at the farm, it may be possible completely to evacuate the oldest buildings, which have long since outlived their usefulness and should be torn down.

Diet.

Special attention is being given to the question of diet at all of the hospitals. Fruit and vegetables are being furnished in increased quantities, and a careful scrutiny is made of all food to see that the proper proportions are maintained, and only the best qualities are provided both for the patients and for the employees. The menus are reviewed from time to time in order to secure a variety of food. An interesting experiment is being conducted at two of the hospitals to note the effect of a cereal drink in lieu of the regular coffee. While the investigations are not complete the indications are that it will prove beneficial to the patients.

Parole.

An outstanding need in the hospitals is the extension of supervision of those out on parole. Careful follow up and examination is

effective in the prevention of the return of patients. This must be carried on by trained psychiatrists competent to recognize disturbing symptoms and to adjust patients to a normal environment.

The occupational therapy maintained in certain of the state hospitals is of a high order and is improving constantly. Articles made by inmates are sold at the institutions and at fairs, the proceeds usually reverting to the amusement fund of the institution.

Clinics.

The State Department is greatly interested in extending from the state hospitals a system of out patient clinics where examinations and mental tests may be given. The geographic arrangement of the institutions is such that were this plan consummated it would mean a fairly complete psychiatric service to California. At present the facilities for such tests are limited to the larger centers. It is our belief that much preventive work of a sound character might develop and save the necessity for commitments to hospitals.

Receiving Cottages.

The new receiving cottages at Mendocino and Norwalk must receive especial commendation. They emphasize all curative processes in the care of the insane. Operating rooms and hydro therapy equipment are model in every respect. Patients are left in these cottages for careful observation, awaiting diagnosis, and their assignment to the various cottages in the hospital proper. Los Angeles County maintains a psychopathic hospital and ample wards at the county poor farm. San Francisco has a ward in its hospital devoted to such patients but many counties have only meager facilities even for temporary detention of insane cases. As a result unfit quarters in county jails must be pressed into service. The State Department has conferred with hospital superintendents and psychiatrists in regard to this matter and has included their recommendations in this report under "County Hospitals."

TABLE 120.

HOMES FOR THE FEEBLE-MINDED.**SONOMA STATE HOME.**

Eldridge, Sonoma County, California.

Date of opening, 1886.

Resident Officers.

Fred O. Butler, M.D.	-----	Medical Superintendent
Herman W. Covey, M.D.	-----	First Assistant Physician
Charles E. Hecker, M.D.	-----	Assistant Physician
J. C. Johnstone, M.D.	-----	Assistant Physician
K. B. Johnstone, M.D.	-----	Assistant Physician
Number patients June 30, 1926	Men 1115 Women 998	Total 2113
Capacity	Men 1143 Women 953	Total 2096
Total number of employees	-----	235
Per capita cost 1925-1926	-----	\$251.27
Total acreage of ground	-----	2740

The home is located at Eldridge, Sonoma County, about fifty miles north of San Francisco. It can be reached by Southern Pacific Railroad from Oakland or Northwestern Pacific Railroad from Sausalito.

Telephone No. 29-F-2.

Visiting days: Saturday. Hours: 2 to 4 p.m.

POMONA STATE HOME.

Spadra, Los Angeles County.

To be opened 1927.

Resident Superintendent, Dr. G. S. Bliss.

Permanent Improvement Appropriation, 77th and 78th Fiscal Years.**Sonoma State Home—**

One cottage and equipment for inmates	-----	\$65,000 00
Reconstruct farm buildings	-----	10,000 00
Complete electric system	-----	25,000 00
Complete sewage disposal plant	-----	3,000 00
Bake oven	-----	2,500 00
Garage for employees	-----	5,000 00
Total	-----	\$110,500 00

Pacific Colony—

Construction of buildings	-----	\$280,000 00
Machinery and equipment for buildings	-----	89,329 00
Subway, roads and bridges	-----	25,000 00
Steam service	-----	15,838 00
Total	-----	\$410,167 00

At the close of the present biennial period, June 30, 1926, the total population resident at the Sonoma State Home was 2113, made up of 1115 males and 998 females, while in addition, there were about 675 who were on probation, having been placed in private homes where they were still under supervision by representatives of the state institution. This gives a total population of 2788 under state care.

Contrary to general opinion, the average age of the inmates at Sonoma, is 27 years. That is to say, while there are many boys and girls at the institution, there are others who went there as children, and with the passing of the years, have become adults without their mental condition improving sufficiently to permit of their discharge, thus raising the average age.

The statement has frequently been made by those unfamiliar with the situation that there were large numbers waiting for admission to the home at Sonoma. In order to ascertain the facts, a survey of the so-called "waiting list" was made by the Department of Public Welfare, from which it was determined that this list included applications made as far back as thirty years ago, and when the analysis of the list was completed, it was discovered that not more than 200 were

actually awaiting admission, of whom about 75 needed simply temporary treatment. Since that time, three large modern cottages have been completed, housing 240 patients, so that provision has now been made for all on the waiting list. In addition to these cottages, a fine auditorium and educational building has been completed, so that the home at Sonoma is now in better condition than it has ever been. It is hoped that it may be possible to provide for a new hospital in the new budget.

The new institution which is being erected at Spadra (which will probably be known as the Pomona State Home), is progressing rapidly. Four concrete, fireproof, one-story cottages, each with a capacity of 80 patients, have been completed; a superintendent's residence is under course of construction; the power house is completed and the kitchen-commissary-dining room building and the laundry are under way. It is hoped to have this institution ready for occupancy during the summer of 1927. The new superintendent has arrived and is actively engaged in supervising the work. The institution when opened will have an immediate capacity of 320 patients, but the power house, kitchen-commissary, store rooms, laundry and other similar buildings will have a capacity for taking care of a much larger population as new inmate cottages are constructed.

PRIVATE INSTITUTIONS.

In the code provision which delegates to the state department the right to license boarding homes for children under sixteen years of age, the state finds its jurisdiction over homes caring for mental defectives. A number specializing in this work are now in operation. These represent a wide variety of types of mental defects. They meet the desires of those parents who are reluctant to commit their children to a state institution but whose children must have training and custody different from the normal members of the family. Los Angeles County especially has a large number of these homes. Some house the lowest grades in the scale of deficiency, others take the high grade teachable group.

Supervision here can not be too thorough, for they are children not easy to lead who must be protected against any severity. They require high-minded superintendents, men and women endowed with an appreciation of human nature and the causes which have brought about the unhappy conditions surrounding their charges. The increased number of these homes in southern California may be attributed in some measure to the distance of the State Home at Sonoma, but the opening of the new home in Pomona will relieve this, and the need for a number of these small homes will be eliminated. The department is inclined to believe that this will be desirable except in instances where the group is very small and where an accredited local agency may keep in close relationship to them, visiting frequently and watching the physical and mental progress of each child.

The field of mental hygiene is one of outstanding development in recent years. New methods of instruction and treatment are becoming known. Every mentally defective child must be viewed in the light of these advances. Each must have the individual approach that is given the normal child but an approach from a person of highly specialized

attainments. This means an expense which the state can best meet and which in its schools is constantly nearer of attainment.

Classes in public schools are contributing their share to the training of high grade defectives. San Francisco has a fine record in that only 7% of the children admitted to their classes went ultimately to Sonoma.

In one of our large orphanages separate provision is being made for mentally defective girls. The teacher has had definite training along her line of activity and excellent results are being shown. Vocational training goes hand in hand with an accredited academic curriculum, fitted to the peculiar needs of the pupils.

Colonization for defectives is another development whose importance must be acknowledged. With proper safeguarding certain types of defectives may acquire financial independence. A central home, well supervised, employment fitted to the capacity of the employee, all while under parole from the state institutions, have been successfully carried on in other states. California has had the plan under discussion and the time has come when it may be safely and actively advanced. It means economic independence to patients and a justifiable saving of funds to state and county. Sonoma has a large number on parole, under the guidance of their parole officers, and additions can and ought to be made to their number under the colony plan.

APPENDIX.

LAW CREATING A STATE DEPARTMENT OF PUBLIC WELFARE.

CHAPTER 18.

POLITICAL CODE. SEC. 2330. A department of the government of the State of California to be known as the State Department of Public Welfare is hereby created. The department shall be conducted under the control of an executive board of six members, who shall be appointed by the Governor for a term of four years and until their successors are appointed, and qualified, except that members of the State Board of Charities and Corrections at the time this act takes effect shall become members of the board herein provided, to serve for the remainder of their terms. The terms of three members of the board shall expire on February seventeenth of each even-numbered year. Women may be appointed members of said board or hold any position in the appointment of said board. No person shall be appointed a member or continue to act as such, while he is a trustee, manager, director, or other administrative officer of an institution subject to the provisions of this chapter. Appointments to fill vacancies before the expiration of such terms shall be for the residue of terms in the same manner as original appointments. The Governor shall be ex officio a member of said board.

2331. The Department of Public Welfare shall succeed to and is hereby invested with all the duties, powers, purposes, responsibilities, and jurisdiction of the State Board of Charities and Corrections, and whenever by the provisions of any statute or law now in force or that may hereafter be enacted a duty or jurisdiction is imposed or authority conferred upon the State Board of Charities and Corrections, such duty, jurisdiction and authority are hereby imposed upon and transferred to the Department of Public Welfare with the same force and effect as though the name of the Department of Public Welfare had been specifically set forth and named therein, in lieu of the name of the State Board of Charities and Corrections. The State Board of Charities and Corrections and the positions of all of the officers, deputies and employees thereunder are and each of them is hereby abolished, but the rules and regulations established thereunder are hereby continued in force. The State Department of Public Welfare shall be in possession and control of all records, books, papers, offices, equipment, supplies, moneys, appropriations, and all other property of the State Board of Charities and Corrections.

2332. The members of the executive board of the State Department of Public Welfare shall act without compensation, but shall be allowed their actual necessary expenses. The said board may appoint a secretary who shall be a civil executive officer, and such other employees as it may deem necessary to carry out the provisions of this act, and shall determine their salaries.

The secretary of said board shall execute a bond in the sum of \$5,000, and take the oath of office prescribed by the Political Code for the executive officers of this state. The board shall provide itself with an office in the city and county of San Francisco. Meetings of the board may be held at such times and in such places in the State of California as said board may deem fit. It may make such rules and orders for the regulation of its own proceedings as it may deem necessary, and may fix the number of members necessary to constitute a quorum. The failure of a member to attend three consecutive meetings of said board during any calendar year, unless excused by formal vote of the board, may be construed by the Governor as a resignation of said nonattending member.

2333. The department is hereby authorized and empowered and it shall be its duty as a whole, or by committee, or by its secretary, or other agent, whom it may authorize to investigate, examine, and make reports upon the charitable, correctional, and penal institutions of the state, including the state hospitals for the insane, of the counties, cities and counties, cities and towns of the state, and such public officers as are in any way responsible for the administration of public funds used for the relief or maintenance of the poor. All the persons or officers in charge of or connected with such public institutions, or with the administration of said funds, are hereby required to furnish to the board or its committee or secretary such information and statistics as they may request or require, and allow said board, committee, or secretary free access to all departments of such institutions and to all of their records. In order to secure accuracy, uniformity, and completeness in such statistics and information, the department

may prescribe such forms of report and records to be kept by all persons, associations or institutions subject to the provisions of this chapter, other than those public institutions for which a different form has been or may be prescribed by the Department of Finance, and it shall be the duty of each of such persons, associations or institutions to keep such records and to render such reports in conformity to the forms so prescribed; *provided, however*, that, so far as the same may be applicable there shall be incorporated in such forms the information and data which is now or may hereafter be required to be contained in the records and reports of the several state hospitals. All plans of new buildings, or parts of buildings for any of the public institutions coming under the provisions of this section, or any additions or alterations in such buildings, shall, before their adoption by the proper officials, be submitted to the board for suggestions and criticism.

2334. The board shall have power to issue compulsory process to compel the attendance of any witness before said board or any member thereof, and to require the production of such books or papers relating to any public institution mentioned in the preceding section as they may deem necessary; *provided*, that no witness shall be required to attend before said board out of the county in which he resides. Any member of said board shall have power, and he is hereby authorized to administer an oath to any and all witnesses coming before said board, or any member thereof, for examination, and to examine such witness or witnesses in reference to any matter relating to public institutions mentioned in the preceding section appertaining to the inquiry before the department, or said member. The superior court in and for the county, or city and county, in which any inquiry, investigation or proceeding may be held by the State Department of Public Welfare, shall have power to compel the attendance of witnesses, the giving of testimony and the production of papers, including books, accounts and documents, as required by any subpoena issued by the State Department of Public Welfare. The court upon petition of the State Department of Public Welfare shall enter an order directing the witnesses to appear before the court at a time and place to be fixed by the court in such order, the time to be not more than ten days from the date of the order, and then and there show cause why he had not attended and testified or produced said papers before the State Department of Public Welfare. A copy of such order shall be served upon said witness. If it shall appear to the court that said subpoena was regularly issued by the State Department of Public Welfare, the court shall thereupon enter an order that said witness appear before the State Department of Public Welfare at a time and place to be fixed in such order, and testify or produce the required papers, and upon a failure to obey said order, said witness shall be dealt with as for contempt of court.

2335. Two months prior to each regular session of the legislature, the department shall make a full and complete report to the governor of all its transactions during the preceding two years, showing fully and in detail all expenses incurred and moneys paid out by it, and giving a list of all officers and agents employed, and the actual condition of all institutions under its supervision, with such suggestions as it may deem necessary and pertinent, and with recommendations for legislative and executive action.

2336. The provisions of this chapter shall not apply to the Veterans' Home of California, located at Yountville, Napa County, nor to the Woman's Relief Corps Home at Evergreen, Santa Clara County.

2337. No person, association or corporation shall hereafter maintain or conduct in any city, county, or city and county, any institution, boarding house or other place for the reception and care of aged or infirm persons nor engage in the finding of homes for children under sixteen years of age, nor place any child under sixteen years of age in any home, without first obtaining a license or permit therefor in writing from the State Department of Public Welfare or from an inspection service approved or accredited by such State Department of Public Welfare.

For the purpose of this chapter the term "approved and accredited inspection service" shall be construed to mean the health department of a county or group of counties, city or group of cities, or city and county maintaining a qualified public health service which shall include at least one regularly licensed physician or a qualified social service inspection force which inspection service has been approved in writing by the State Department of Public Welfare of the State of California.

2338. The State Department of Public Welfare and all approved and accredited inspection services are hereby authorized to issue permits or licenses to persons,

associations or corporations to conduct institutions, boarding homes, or other places for the reception and care of aged and infirm persons or to engage in the finding of homes for children or placing children in homes, and to prescribe the conditions upon which such permits or licenses shall be granted and such rules and regulations as may be deemed best for the government of such institutions, and said inspection service or department is further empowered by one or more of its members, secretary or duly authorized representative, to inspect and report upon conditions prevailing in all such institutions, homes or places.

2339. A permit or license issued by the State Department of Public Welfare or by an approved or accredited inspection service shall expire twelve months from date of issuance of license, and application for renewal of a permit or license must be filed ten days prior to its expiration each year, otherwise it shall stand as automatically cancelled.

2340. Permits or licenses may be revoked for cause after a hearing before the State Department of Public Welfare or an approved and accredited inspection service, after written notice of the time and place of such hearing and the charges made against the holder of the permit or license has been duly served on him, not less than ten days prior to the time fixed for such hearing.

2341. No license may be transferred in any case, without the consent of the department, and no change of location of any institution, boarding house or other place for the reception and care of aged or infirm persons may be made without permission from the State Department of Public Welfare or a duly approved and accredited inspection service.

2342. Every holder of a permit or license must maintain a register setting forth the name of each aged or infirm person, or child under the age of sixteen years, the last previous address, age, nearest of kin, mother's maiden name, person responsible for his care and maintenance, and such other data as may be required by the State Department of Public Welfare, and shall notify within forty-eight hours in writing, the State Department of Public Welfare or the approved and accredited inspection service by which such license or permit was issued of any deaths or changes in the personnel of such home.

2343. It shall be the duty of the district attorney of each and every county, upon application of the State Department of Public Welfare or their authorized representatives, or an approved and accredited inspection service, to institute and conduct the prosecution of any action brought for the violation of any of the provisions of this chapter within his county.

2344. Any person, association or corporation who or which maintains or conducts or assists in maintaining or conducting as manager or officer or in any other executive or administrative capacity an institution, boarding home or other place conducted as a place for the reception and care of aged or infirm persons or engages in finding homes for children under the age of sixteen years, or places or keeps any child under the age of sixteen years in any home without first having obtained a permit or license therefor in writing as provided in section 2339 of the Political Code is guilty of a misdemeanor.

2345. (a) It is hereby made the duty of the State Department of Public Welfare to prescribe forms of record for the use of the superintendents of county hospitals and almshouses, and jailers in charge of county jails and city prisons, in keeping the records of persons received into or discharged from such county hospitals, almshouses, jails and city prisons.

(b) Books of record for the records so prescribed by said State Department of Public Welfare may be printed at the expense of said department and furnished to such county hospitals and almshouses, county jails and city prisons, at the cost thereof.

(c) It shall be the duty of the superintendent in charge of any such hospital or almshouse and the jailer in charge of any such jail or city prison to keep the records prescribed by the State Department of Public Welfare as fully and completely as possible, and any such superintendent or jailer who neglects and fails to keep the records thus prescribed shall be guilty of a misdemeanor.

(d) It shall also be the duty of the State Department of Public Welfare to prescribe such forms of record as are provided for in section 10 of an act entitled "An act to provide for the maintenance and support, in certain cases, of indigent, incompetent, and incapacitated persons, other than persons adjudged insane and confined within the state hospital, becoming a public charge upon the counties or cities and counties within the State of California, and for the payment thereof into a fund for the maintenance and support of such persons," approved March 23, 1901, as amended.

2346. When a child has been relinquished by its parents or guardians for the purpose of adoption, a copy of the relinquishment must be filed with the State Department of Public Welfare prior to the commencement of any adoption proceedings affecting such child as provided in section 224 of the Civil Code.

SEC. 2. An act entitled "An act to create a State Board of Charities and Corrections, prescribing its duties and powers, and appropriating money therefor," approved March 25, 1903, as amended; and an act entitled "An act providing for the supervision and control by the State Board of Charities and Corrections of the placing of dependent children in homes and for the supervision of all societies or organizations engaged in such work and known as 'children's home-finding societies,'" approved April 24, 1911; and an act entitled "An act to provide for the licensing, inspection and regulation of maternity hospitals or lying-in asylums, and institutions, boarding houses, and homes for the reception and care of children, by the State Board of Charities and Corrections, and providing a penalty for the violation of the provisions of this act," approved April 23, 1913, and an act entitled "An act making it the duty of the State Board of Charities and Corrections to prescribe forms of record for the use of county hospitals and almshouses, county jails, and city prisons; and authorizing the board to furnish such records; and making the neglect or failure on the part of superintendents and jailers in charge thereof to keep such records a misdemeanor," approved June 11, 1915, are hereby repealed.

SUMMARY OF LAWS RELATING TO PUBLIC WELFARE.

Political Code.

Section 2330, creates a State Department of Public Welfare, outlines the method of appointment of members.

Section 2332, outlines duties of board members.

Section 2333, department authorized to make reports on all charitable, penal and correctional institutions, on hospitals for insane. May demand reports from officials in charge of these institutions.

Section 2334, gives department power to compel attendance of witnesses, to require the production of papers. Assigns similar powers to the superior court.

Section 2335, requires the filing of a biennial report.

Section 2337, places upon the department the responsibility for issuing licenses to those who maintain or conduct a home for aged persons, children under sixteen or place a child under sixteen in any home. Establishes the right to recognize certain agencies as approved and accredited by the state department. Defines an approved and accredited agency.

Section 2338, gives the state department the right to issue licenses for the conduct of institutions and boarding homes for aged persons and children and to prescribe conditions under which this may be done.

Section 2339, applies to the need of renewing licenses every twelve months.

Section 2340, applies to the revocation of licenses after a hearing before the state department or an accredited agency.

Section 2341, describes certain conditions under which licenses continue in effect.

Section 2342, requires the maintaining of a register in licensed boarding homes.

Section 2343, places upon the district attorney the necessity for prosecuting persons who violate any of the provisions applying to the licensing of homes.

Section 2344, makes it a misdemeanor to violate the provisions requiring a license in order to board children or aged persons.

Section 2345, makes it a duty of the state department to prescribe record forms for county hospitals and jails.

Section 2346, requires the filing of all relinquishments for adoption with the State Department of Public Welfare.

Penal Code.

Section 1203, requires the semi-annual filing of reports by probation officers with the state department.

Statutes of 1921, page 814.

Juvenile court law, requires the annual filing of a report of the probation committee with the state board.

Statutes 1917, page 444.

A law making it the duty of boards of supervisors to investigate every application for relief and to keep such records as may be prescribed by the state board.

LETTER OF TRANSMITTAL.

OFFICE OF CALIFORNIA STATE BOARD OF HEALTH,
SACRAMENTO, September 1, 1926.

To His Excellency FRIEND WM. RICHARDSON,
Governor of California.

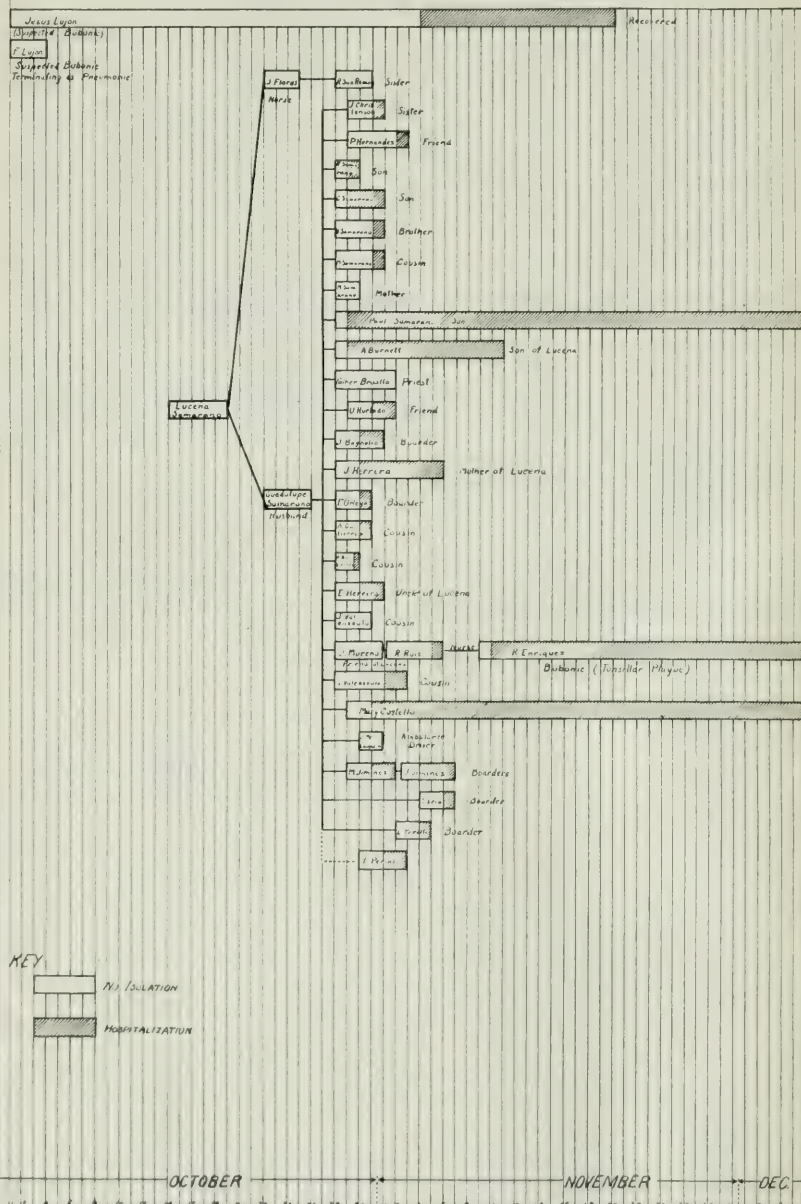

DEAR SIR: In accordance with the state law, I herewith transmit to you the twenty-ninth biennial report of the State Board of Health for the seventy-sixth and seventy-seventh fiscal years.

Respectfully submitted.

WALTER M. DICKIE, M.D.,
Secretary of State Board of Health.

OCT-NOV. 1924

CALIFORNIA STATE BOARD OF HEALTH

REPORT OF THE SECRETARY.

The control of communicable diseases requires eternal vigilance. State and local health officers, during the biennial period July 1, 1924, to June 30, 1926, have been confronted with a large number of specially acute problems in the control of communicable diseases. Human plague, acute anterior poliomyelitis, smallpox and diphtheria constitute some of the most difficult problems of control that have confronted Californians during the past two years. The outbreak of human plague in Los Angeles required intensive effort upon the part of health officers. The management of this outbreak represents the most outstanding accomplishment of California health officers during the period mentioned.

THE LOS ANGELES PLAGUE OUTBREAK

The first intimation the California State Board of Health had that plague existed in Los Angeles was the receipt of a telegram on October 31, 1924, from the Los Angeles General Hospital requesting plague serum. An investigation by the Board was started October 31st and on November 1, 1924, the diagnosis of pneumonic plague was confirmed and the existence of plague officially declared on that date.

The investigation revealed the following history:

On October 19, 1924, Lucena Samarano, a Mexican woman, living at 742 Clara street, Los Angeles, California, died after an illness of four days. An autopsy was not held, as no unusual interest was attached to the death. This woman lived with her husband and family at the above address, where she maintained a rooming and boarding house.

On October 22, 1924, this woman's husband, Guadalupe Samarano, and Jessie Flores, a practical nurse who nursed Lucena Samarano, were taken ill, the latter dying at her home, 741 Clara street, the former dying in the Los Angeles General Hospital. An autopsy was held on Guadalupe Samarano, and the cause of death was given as double lobar pneumonia.

Up to October 24th there was no reason to suspect pneumonic plague. A few days following the death of the husband and nurse, the Los Angeles City Health Department and the Los Angeles General Hospital received a call, stating that a number of Mexicans in the Mexican quarter—the Macy street district in Los Angeles, and the Belvedere district in county territory—were desperately ill. The physician who sent in the call stated that these patients were critically ill of some malady which he could not definitely diagnose, but which he thought might be highly contagious, since several others in the neighborhood were similarly affected, namely, with high fever, pain in the back and chest and expectorating a profuse bloody sputum.

The resident physician of the Los Angeles General Hospital answered the call in the Belvedere district. Here he found an old Mexican woman crying between paroxysms of coughing, and a Mexican man restless and feverish. Through the aid of an interpreter, it was learned that these patients were stricken the day previous with a severe pain in the front of the chest and along the entire spine, a few reddish spots on the chest, and with a temperature of 104.

The interpreter led the physician to a nearby home, where a young man and his wife and a young girl were found, suffering with symptoms similar to those of the other cases. (Three days later the man was dead and the two women dying in the Los Angeles General Hospital.) The interpreter remarked that four other boys, relatives of these patients, were also ill at their home, and that the father (Guadalupe Samarano) of the young men above referred to, had died in the hospital the week previous of what was thought to be pneumonia.

The medical inspector of the Los Angeles City Health Department found similar conditions to exist in the homes visited by him in the Macy street district. All of these patients were hospitalized. By October 28, 1924, eighteen patients, friends and relatives of Lucena Samarano, were admitted to the hospital. They all developed signs of severe pneumonia, with profuse blood expectoration and marked cyanosis, all dying after an illness averaging four days.

On October 31, 1924, an autopsy was held on Horace Guiterrez, one of the above patients. Smears from the lungs of this patient showed gram negative bipolar staining bacilli, characteristic of plague. Sections of the lungs confirmed the diagnosis of pneumonic plague. The diagnosis of pneumonic plague, having been established, in this case, sections were then made from the lungs of Guadalupe Samarano, in which plague was proven.

On October 31, the day plague was diagnosed, Mary Costello, the nurse who cared for Guadalupe Samarano, the priest who administered the last rites, and the ambulance attendant who moved him to the hospital, all contracted the disease. The former recovered and the latter two died.

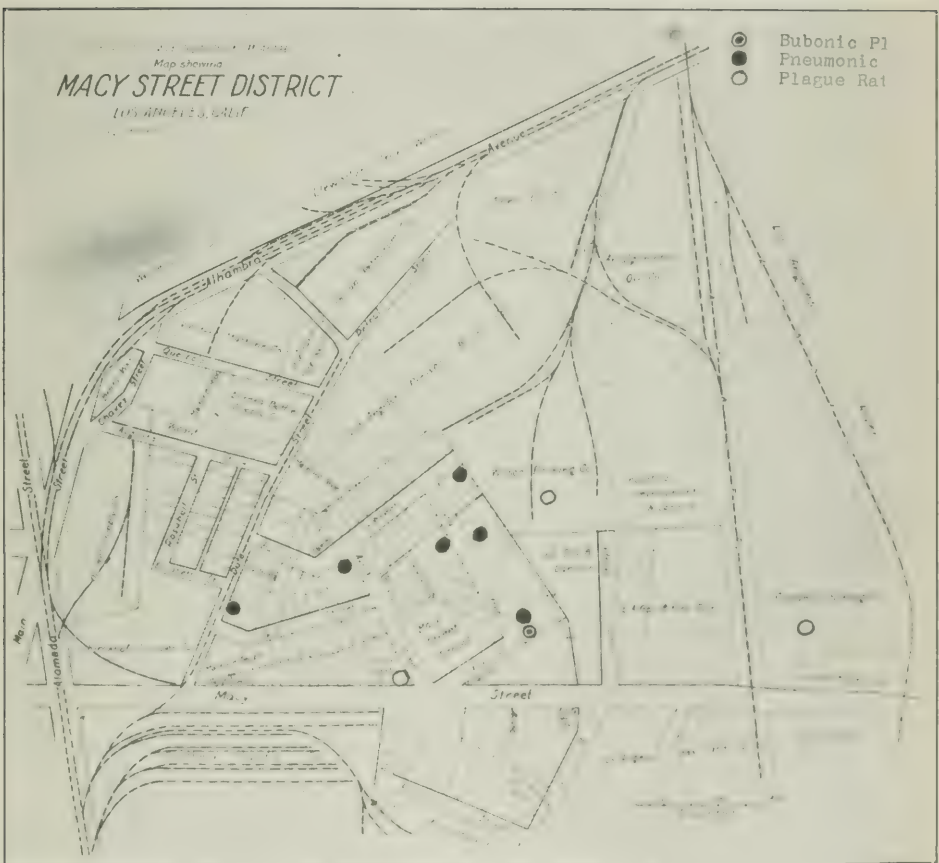

In all, there were thirty-two cases of pneumonic plague in this epidemic, of which thirty terminated fatally. There were ten persons living at the Samarano home at 742 Clara street. Sixteen relatives and friends who visited the home during the illness of the first patient also developed pneumonic plague. Other contacts to develop the disease were the nurse, a Spanish priest and the ambulance attendant. One case was not definitely traced. This patient was in *articulo mortis* at the time of admission to the hospital and his friends could throw no light upon his whereabouts before taken ill. The first address given, on admission to the hospital, was from the Macy street district and it is believed he attended a dance in the district about October 28th. Heart puncture after death of this patient showed bipolar organisms. (See Chart, Los Angeles Epidemic.) One hundred and fourteen contacts with pneumonic plague cases were located and hospitalized and eighty-two cases suspected of having plague were sent to the hospital for observation. Just why other cases did not develop among the 114 contacts is not satisfactorily explained. Their escape may be considered as good fortune and not due to any immunity.

So far as we have been able to ascertain, pneumonic epidemics have arisen as the result of earlier bubonic infections. In the course of our investigation, one such case was finally located. This case was in an individual who lived at 700 Clara street, only a few doors from the address where pneumonic plague first appeared. This patient, a male Mexican, age 55, was taken ill October 1st, with slight femoral bubo

MACY STREET DISTRICT

LOS ANGELES, CALIF.

- Bubonic Pl
- Pneumonic
- Plague Rat

associated with constitutional symptoms. Diagnosis, October 1st, venereal bubo. This patient was located October 31st, at which date a culture was made from the sinus at site of the old bubo. This showed bipolar staining organisms, and a guinea pig inoculated with the pus died in twelve hours. Other cultures were made and bipolar organisms obtained from culture and from animals autopsied following inoculation. Spleen and liver of guinea pig inoculated from the cultures showed pathological changes, suggestive of plague. This case, however, was not definitely classed as plague until nine months after the illness, at which time his blood serum gave a positive agglutination and Bordet-Gengou reaction. This patient lived within one short block of where the first plague infected rat was found. (See map, Macy district.) As additional evidence that this man suffered from plague may be mentioned that his daughter, a young child, was taken ill about the same date as her father, with a cervical adenitis, and severe constitutional symptoms, and died on the fourth day of illness of what the autopsy surgeon diagnosed as lobar pneumonia.

In all, there were seven cases of bubonic plague in Los Angeles between October 24, 1924, and January 11, 1925. The symptoms were not to be distinguished from other cases of bubonic plague, but there are certain facts of particular interest. The first case was not seen until one month after onset and finally classed as plague nine months afterward. The second case was a contact with one of the pneumonic cases and a history of ecto-parasitic infection was not obtainable. This patient's blood serum also gave a positive agglutination and Bordet-Gengou reaction nine months after recovery, and was finally classed as tonsillar plague. Two cases were in children from the same family, and dead rats, which showed plague lesions, were found underneath the floor of their home. One case occurred in county territory five miles from any of the bubonic cases, and one mile from the address where some of the pneumonic cases occurred. Contact with human cases or ground squirrels was not determined and infected rodents from this locality were never found.

Two cases occurred in homes within a short distance of each other. One case had the bubo in the inguinal region and recovered. The other and the last human case to occur was in a boy, in whom the primary bubo was located in the anterior cervical region. This case later developed plague pneumonia and died. The prima vista diagnosis by the visiting nurse in this case was suspected mumps, but being in the locality where a previous case of plague had occurred, it was referred to the State Board of Health for investigation. This case was hospitalized, as were also eighteen contacts, but no other cases developed.

Early in the investigation it was learned from reliable sources that an epizootic of some nature had occurred among the rats in the district where plague first made its appearance. As evidence that such an epizootic did occur, it may be mentioned again, that the first rat to be proven plague infected was found in a dying condition in a grocery store one block from where the first human case occurred. Also that the address, where two cases of bubonic plague occurred, is only a few blocks separated from the first focus of human and rodent plague, and

that dead rats were found beneath the floor of the home where the Anderson street cases occurred.

The study of our investigation leads us to the conclusion that the pneumonic epidemic was preceded by an epizootic among the rats some few weeks before the epidemic; that the first case of human plague to occur in the district was of bubonic type; that the pneumonic and the scattered bubonic cases were all of rat origin. We are reminded "that rat fleas may be attracted to man, jump on him, but take some time to feed on him. This last observation is of importance in connection with the question of importation of infected fleas from place to place." We are also of the opinion that in Los Angeles city and county, the rat epizootic preceded and was accountable for the plague infection among the ground squirrels.

At midnight, October 31, 1924, following the diagnosis of pneumonic plague, the Mexican section of the city (see map of Macy street district)

Attendants upon pneumonic plague cases wore masks to protect themselves against contracting the disease.

which includes about eight city blocks, and which housed approximately 1800 Mexicans, was placed in quarantine. The quarantined area in county territory was about equal in size and population to that of the city.

In the control of this epidemic, there are several outstanding features to be considered:

The Mexican people, unlike the Orientals, do not attempt to hide their sick or dead. Since they are a Catholic people, they always, when ill, call the priest, and generally are prompt in securing medical aid. This eliminated many of the difficulties encountered in the control of other plague epidemics. With the establishment of a rigid quarantine, the every-day activities of several thousand people suddenly ceased. To feed a population equivalent to that of a small city, and at the same time prevent intimate contact, was a problem to be met promptly and efficiently. The Los Angeles County Charities undertook this phase of the work. With the assistance of the public school authorities and the

school nurses of these districts, a card index of the inmates of each home was obtained. The County Charities then provided seven-day rations for each home, thus establishing a cubical isolation for each house within the quarantined area. Through the cooperation of the Catholic Board of Charities, it was made possible to have a priest and social worker within the districts, who could speak Spanish, and who did valuable work in quieting the alarm that naturally arose among the inhabitants of the quarantined area. Through the assistance of this organization, it was also possible for the health authorities to be kept informed of all cases of illness occurring among the Mexicans of the community.

The Baptist Church Mission, located within the Macy street district, was turned over to the authorities for use as sleeping quarters for persons who were caught in the quarantine net. Later, this church was used as a bacteriological laboratory for the examination of rats and the laboratory maintained there until it was moved to permanent quarters.

On November 3, 1924, a meeting was held at the office of the mayor of Los Angeles. This meeting was attended by representatives of the federal, state and local health departments and business men of the community. All plague control work was placed under the direction of the secretary of the California State Board of Health.

The following plan of operations was agreed upon and placed in operation:

1. Strict quarantine of all areas where plague cases had occurred or might occur.

2. Segregation of the inhabitants of these districts and prevention of the gathering of groups of people.

3. A daily house to house inspection within the quarantined areas.

4. Hospitalization of all known contacts with pneumonic cases and hospitalization of all cases of illness found within the quarantined areas.

5. The examination of all dead bodies by physicians, and autopsies by the pathologist at the Los Angeles General Hospital, on all cases dying of unknown causes or in which a diagnosis had not been definitely established.

6. The establishment of a bacteriological laboratory for exclusive examination for rodent and human plague.

7. A special force of men for widespread trapping, poisoning, and rat-proofing of buildings.

8. The disinfection of premises by petroleum spray.

9. The tagging of all rats, mice and squirrels collected, so the locations of any infected rodent would be known and the progress of infection mapped out; and the tagging and special marking of all rodents from the harbor district.

10. The proper disposal of garbage and the separation of the rat from his food supply.

11. Eradication of ground squirrels, under the direction of the county horticultural commissioner, who had an efficient and well organized department of rodent control.

CONTROL MEASURES.

1. *Quarantine.* Each district, in which cases developed, was declared to be an infected area and a cordon was thrown around it, and special

guards placed in front and rear of the houses in which cases had occurred or where contacts lived. In each instance, the area was made sufficiently large to include all possible contacts. There were five districts. First, the Macy street district, where the original cases occurred, was the largest, and included about eight city blocks and housed about twenty-five hundred Mexicans; second, the South Hill street district included one large apartment house, occupied by Mexicans; third, the Marengo street district, which included several isolated Mexican homes; fourth, the Pomeroy street district, which included several isolated Mexican homes; and fifth, the Belvedere Gardens district, in county territory, included several city blocks and was inhabited by about five hundred Mexicans.

The inhabitants of each house were forbidden to leave the premises and gatherings of all nature were prevented. This quarantine was maintained for twelve days after the date of onset of the last case.

2. *Medical Inspection.* Public health nurses and physicians were placed on duty in each district, a census of each household taken and a daily inspection of all inhabitants made; all cases of illness were examined by a physician and in any case of doubt the case was immediately hospitalized. Six cases of pneumonic plague and five cases of bubonic plague were discovered by these methods and no secondary cases developed from the cases thus discovered.

All free clinics, especially those located in the Mexican quarter, were instructed to report all cases not showing a definite clinical entity, or which might be the least suspicious of plague. The local medical society called a special meeting at which plague in general was discussed and preventive measures explained. The medical men responded promptly and requested many diagnostic investigations. The police hospitals all reported cases of sudden illness or death and the charity societies, social service organizations and school nurses and teachers, and ministers throughout the city, kept the State Board of Health informed of cases of illness. All calls were answered and a total of one hundred and fifty special investigations were made.

All physicians, private hospitals, nurses and others engaged in attending the sick were given the following instructions as to sending specimens to the laboratory for examinations:

1. Pus or gland fluid from buboes aspirated by syringe or collected after incision planted on agar slants or placed in a sterilized glass bottle, securely stoppered.

2. Portion of tissue affected, removed at operation, in sterilized glass bottles, securely stoppered.

3. Sputum or mucus from nose or mouth collected in sterilized glass bottles and securely stoppered.

4. All specimens to be labeled with name, sex, age, race, occupation and place of occupation, with residence, with date of onset of illness.

On admission to the hospital, all patients, their nursing units and their charts were labeled with a red ticket, which meant that every patient bearing this red ticket was of interest from a plague standpoint. Upon each ticket was written the classification used in the plague bulletins, as "Pneumonic Plague," "Suspected Pneumonic Plague," "Suspected Bubonic Plague," or "Individual Isolation."

A daily plague bulletin was issued from the hospital, which gave the number of plague cases remaining, suspected cases of pneumonic plague and suspected cases of bubonic plague; number of deaths with cause, and a final diagnosis of all suspicious cases, as rapidly as they could be determined. All cases terminating fatally in the hospital were autopsied and plague was eliminated only on negative pathological and bacteriological examinations.

One hundred fourteen contacts with pneumonic plague were admitted to the hospital and eighty-two individuals suspected of having plague were admitted and held in isolation until a definite diagnosis was made.

Precautions used by attendants. A mask made of a pillow slip, with celluloid eye pieces, gown fitting closely about the neck, and overlapping the ends of the head mask, cap and rubber gloves were worn by attendants. (See photograph.)

Emergency masks worn by attendants upon pneumonic plague cases were made of pillow cases with a celluloid window held in place by adhesive tape.

One of the first orders issued by the State Board of Health was to all undertakers that bodies of Mexicans and others living within the infected districts were not to be embalmed until examined by a physician appointed as State Inspector of the Dead, or by a representative from the State Board, City or County Health Departments; also, that all persons dying suddenly or from undiagnosed causes were to be buried only on permit and no body was to be shipped without a permit from the board, a special certificate being used for this purpose.

The city and county were divided into districts and physicians assigned as inspectors of the dead. All cases of death which were not perfectly clear as to diagnosis were ordered for autopsy. All autopsies, so ordered, were made by the pathologist of the Los Angeles General Hospital, with a representative of the State Board of Health present. In each case, the diagnosis of plague was made or eliminated by a complete bacteriological examination, including animal inoculation.

In anticipation that autopsies on suspicious cases might be done by

private pathologists the following instructions were issued regarding specimens to be sent to the Plague Control Laboratory for examinations:

Human cases—necropsy. Portions of affected tissue, bubo, liver, lung, and spleen—in sterilized glass bottles securely stoppered.

Laboratory. From November 7, 1924, to June 15, 1925, 110,034 rats were examined, of which 157 or a ratio of 1 to 702 were found plague infected; 20,061 squirrels of which five, or 1 to 4012 were found to be plague infected; and 3812 mice were examined, none of the latter showing plague infection. Of the total number of positive rats, 45.4 per cent showed injection of subcutaneous tissue. Enlarged and hemorrhagic glands were present in 54.3 per cent of all positive rats. The glands in the inguinal submaxillary or cervical showed less enlargement, and the pelvic or mesenteric were rarely involved. Pleural effusion was present in 10.6 per cent.

Although distinct lung lesions in plague rats are considered more or less of a rarity, 10.6 per cent showed lesions, including small abscesses, mottling, adhesions and typical pin point yellowish areas, surrounded by red hemorrhagic zone or halo. Swollen livers, showing necrotic areas, were present in 92 per cent; 73.2 per cent of the spleens were swollen and showed necrotic areas or small abscesses. Sixteen per cent of the rats showing scarred and granular spleen were cases of resolvent plague. From the number of rats found with resolvent chronic plague and the low virulence of some of the strains obtained, it would seem that plague had existed among rodents for a considerable period of time.

From the number of rats proving positive, that had practically none of the classical lesions of either acute or chronic plague, and also the number of organisms found here that produced lesions closely simulating plague lesions, the wisdom of careful animal inoculation and if necessary, reinoculations, before establishing foci or infection, is at once apparent.

The paratyphoid organisms found among the rats at Los Angeles proved the most confusing in plague work. The lesions found in paratyphoid infected rats and lesions in the guinea pig, following inoculation from rat lesions, showed lesions of liver and spleen resembling resolving plague, the livers being dark and swollen, and containing indistinct pin point necrotic areas; spleen dark and peppered with pin point size necrotic and hemorrhagic areas. Upon reinoculation from animal to animal, the liver and spleen lesions became very typical of plague. Inguinal and axillary buboes, very hemorrhagic, were also noticeable.

The presence or absence of bipolar organisms in smears is not an index of infection and should always be followed by animal inoculation before reporting as plague infection. The first eradication measures against plague were instituted in the Macy street district where the first human cases occurred and the first rodent plague case was proven. The first plague infected rat was proven from this district seven days after the epidemic occurred. During the first week of the campaign, eradication measures were undertaken only in those districts where human

cases had occurred. However, having in mind that to confine measures to individual foci of infection would not arrest the progress of infection, eradicated measures were early instituted in sections of the city and county that were as yet unproven plague infected foci. As rapidly as plague infected rodents were proven from a district, this section was given a number and thereafter identified by that number. Forty-eight thousand snap traps were distributed throughout the city. Each district was under the supervision of a district foreman, who supervised the distribution of traps and the work of the trappers, poisoning and wrecking crews. After a period of six months' operation, the rat catch began to decline and the mouse catch to increase. This is not an indication of an increase in mouse population but is an indication of a decrease in rat population. Twenty-three plague infected districts were proven within the city limits. These districts were all located within the old section or Metropolitan district of the city. Plague infected rats have not been found in the new portion of the city. All foci were thoroughly trapped and poisoned and rat-proofing of permanent nature instituted in every instance where plague, human or rodent, was proven to exist. These measures were not limited to the premises where plague was proven, but were extended to all adjoining properties for several blocks, the extent depending upon the character and type of buildings within the infected districts.

Recognizing the importance that plague bears to the shipping interests of the port in which it exists, and its commercial interests to the rest of the world, intensive trapping operations and eradicated measures were instituted at the harbor district on November 6, 1924, five days after the recognition of plague in Los Angeles. The port was made a special district and a force of men constantly kept on duty. In order to avoid the possibility of rodents from this district becoming mixed with those from Los Angeles proper, a red tag was used and one ear clipped. All ships, both coastwise and foreign, entering the port were thoroughly trapped and all rats trapped properly tagged and sent to the laboratory for examination. Infected rats from ships were not found.

On December 29, 1924, the first plague rat from the harbor district was proven. This rodent was trapped on a hog ranch located four miles, by the usual roads of travel, from the docks. The last plague rat was taken from this focus on January 9, 1925. After being thoroughly trapped and poisoned, the ranch was then demolished and the hogs moved to a distance of ten miles from the port.

Rat-proofing of buildings in the harbor district was rapidly advanced. In order to facilitate the rat-proofing of wharves and warehouses, one of the sanitary engineers of the State Board of Health made a thorough survey of this section and submitted plans and specifications for permanent rat-proofing of these structures. This estimate was submitted to the Harbor Commissioners and the recommendations were rapidly put in force. To avoid any possibility of missing a plague infected rodent from the harbor, mass inoculations were made, and by this method plague infected rodents from the harbor district were never demonstrated after removal of the hog ranch.

Vernon City. Vernon City, adjoining Los Angeles on the south, was, on March 11, 1925, proven as a rodent plague-infected focus. The business interests of Vernon subscribed a sufficient sum of money to institute an extensive rat extermination program. This district is entirely commercial and all business concerns have thoroughly rat-proofed their buildings. Plague infected rodents have not been determined in Vernon since April, 1925.

Los Angeles County Territory. Cases of pneumonic plague, contacts with the Macy district cases, occurred at Belvedere, a large Mexican settlement located five miles from the original cases in the Macy street district.

On November 9, 1924, one bubonic case also developed in this district, but several miles from the other cases, and the investigation failed to reveal any relation between this case and the other cases.

Working in cooperation with the State Board of Health, the Los Angeles County Health Department started intensive trapping operations throughout the county territory. A total of 42 plague-infected rats from four foci were proven. All foci in county territory were located on hog ranches—El Monte hog ranch, twelve miles east of Los Angeles, Kitahatas hog ranch at Palms, 10 miles west of Los Angeles; Venice hog ranch at Del Rey, 10 miles southwest of Los Angeles, and Willett's Green, Durbin hog ranch, 15 miles east of Los Angeles. All of these ranches are under separate management, are not adjoining, and are separated from each other by several miles of open territory.

Plague infected ground squirrels were proven in both city and county, but, in each instance, the infected squirrels were taken from hog

ranches where plague-infected rats were found. Ranches, where plague-infected rats were found, were thoroughly rat-proofed by the County Health Department.

Squirrel eradication in Los Angeles city and county was under the direction of the county horticultural commissioner who has a well

CALIFORNIA STATE BOARD OF HEALTH

trained force to carry on this phase of plague eradication measures. On receipt of notification that plague had been found on a piece of property, a ground squirrel survey of all surrounding country was made immediately in order to establish district boundary lines. These

consisted of squirrel barriers, such as built up properties, streams and squirrel free areas.

Crews were put in the districts to clean up the area surrounding the infected property. Rodent control crews continued their work until all land within the district was entirely free from squirrels. Three or four treatments with caron bisulphide and jute waste balls, two ounces of the liquid to each burrow, on the first treatment and four ounces on those following, were sufficient to secure eradication on the level ground. The first application resulted in 90 per cent killed. The use of poisoned fruit and grain and also some shooting was necessary before the districts were entirely free of the last squirrel.

The total squirrel infected territory in the four plague areas amounted to 28,000 acres. In two areas, eradication was complete, as recent inspections have disclosed no squirrels. In the remaining areas apparent eradication has been accomplished. Ninety per cent to 99 per cent reduction in squirrel population has been obtained in the treated portion of the remaining acreage, and the work is being carried on diligently as soil and feeding conditions will permit.

On instituting plague eradication measures in Los Angeles city and county, all adjoining cities and counties were requested to begin trapping operations and send all rodents to the Plague Laboratory for examination. This request was complied with and several thousand rodents were examined from adjoining territory but plague infection was not established. As Oakland had not been examining rats for several years, that city was also requested to start trapping operations to determine whether plague-infected rats existed in the community. Several plague-infected rats were found on the city of Oakland dump. The east bay cities, comprising Oakland, Alameda and Berkeley, combined in plague eradication measures and at the request of the State Board of Health, the federal service took charge of the work in the east bay district.

Inspection of freight. All freight going into Mexico was required to be fumigated. Interstate quarantine was not instituted.

To guard against plague-infected rodents being transported in outgoing freight, such packages and general freight which might have harbored rats were carefully inspected, and all railroad yards and railway warehouses were thoroughly trapped and poisoned. Rat-proofing of a temporary or permanent nature was rapidly carried out in the vicinity of all railway and waterway transportation warehouses, docks and freight stations. The state health officers of all states having commercial relations with Los Angeles were kept fully informed of the situation. The United States Public Health Service was daily informed as to human cases and rodent plague, and all foreign consulates were kept fully posted as to the progress of the epidemic, control and eradication measures.

The pneumonic epidemic of plague was brought under complete control four days after the disease was recognized. The bubonic cases were all isolated cases and this form of the disease did not approach an epidemic.

The question naturally arises here, as it has in previous pneumonic epidemics—What are the factors influencing the decline of the epidemic?

Noticeable meteorological factors do not seem apparent. At the start of the epidemic the mean temperature was 64°F., a few degrees above the normal temperature, and the mean rainfall was slightly below the normal. These variations were maintained throughout the epidemic. Loss of virulence of the bacillus does not appear to have been responsi-

ble. There was no marked variation in the incubation period of any of the cases and bacilli obtained from the last autopsy were as virulent as those obtained from the first. The chief factor in the decline of the epidemic was probably the preventive measures which were enforced and the efforts of the people to protect themselves.

California is now considered as one of the five endemic foci in which plague slumbers, but the disease has also gained a foothold in Louisiana, Texas and Florida and has appeared in Washington. From experiences gained during the past twenty-five years we are convinced that spasmodic efforts to eliminate plague among rodents will not accomplish the desired results.

The campaign against the rat is expensive and difficult. The rat warfare may be briefly summarized as a simultaneous attack upon the habitation and food supply of the rats: the destruction of rat burrows and nesting places; the separation of the rat from his food supply by concreting and screening such places as stables, warehouses, markets, restaurants, etc.; and the rat proofing of all buildings, and the use of poison and traps.

Except in the presence of human cases, it has been exceedingly difficult to interest the body politic or the farmer in ground squirrel eradication from a plague standpoint; however from an economic standpoint, funds are available. It has therefore appeared to us that to accomplish the most efficient and thorough squirrel eradication, it would be advisable to have this phase of control conducted by the Division of Rodent Control, State Department of Agriculture. This department receives a large appropriation and has a well trained organization for conducting squirrel eradication. Field workers engaged in squirrel eradication measures are now forwarding specimens to laboratories designated by the State Board of Health for bacteriological examination. Monterey, San Luis Obispo, Los Angeles, Santa Barbara and Orange counties are now examining squirrels for plague infection. These laboratories are all conducted by bacteriologists who have had experience in plague work. Counties not maintaining full time health departments ship specimens to the State Hygienic Laboratory for examination. For the seven counties adjoining San Francisco, the bacteriological examinations are made at the Federal Laboratory located at San Francisco.

While it is manifestly impossible to accomplish complete eradication of ground squirrels throughout the state, it is possible to maintain a ten-mile squirrel free zone around the center of population and it is upon the establishment of such zones that the success of preventive measures rests.

During the first seven months, following the appearance of plague in Los Angeles, the city spent \$275,000 in plague eradication work, the County Health Department \$80,000, the County Horticultural Commission \$15,074 and the State Board of Health \$10,000, a total of \$380,074. Adjoining counties have spent several thousand dollars in an effort to establish foci of plague infection in these districts and have instituted intensive eradication measures, notwithstanding the fact that plague infection has not been proven. In addition to the sums above mentioned, property owners of Los Angeles city spent \$2,000,000 in complying with rat-proofing ordinances.

A quarter of a century has now passed since plague first appeared in California. During those years two epidemics of bubonic plague have occurred in San Francisco and two pneumonic epidemics, one in Oakland and one in Los Angeles. Sporadic cases of the bubonic type

have occurred from time to time in sections where rodent plague was known to exist. A total of 372 cases, with 257 deaths, have occurred during the twenty-five years.

Human cases have never gotten beyond the boundaries of the state and there is no available evidence to show that plague infection has been transmitted to known plague susceptible rodents in other states.

Local, state and federal officials who have engaged in plague work in California may view with satisfaction and look back with some degree of pardonable pride on the results accomplished.

SMALLPOX.

By far the most virulent outbreak of smallpox ever to occur in California is that which appeared in 1925 and during January and February of 1926. During the calendar year 1925, 4921 cases of the disease were reported to the State Board of Health: of these 58 cases proved fatal. It is a significant fact that most of the fatal cases occurred in adults who had never been vaccinated previous to the attack. Comparatively few deaths occurred among children and youths. In 1924, 9445 cases with 56 deaths were reported. The 1925 outbreak was similar in its characteristics to outbreaks that have occurred in many cities of the United States during recent years, Kansas City, Denver, Toledo, Detroit, Salt Lake City and other metropolitan areas. This virulent outbreak served as an incentive for stimulating activity in the vaccination of citizens of all ages. In many California communities more than 50 per cent of the general population is now immunized against smallpox. It is believed that the proportion of immunized individuals is sufficiently high in most communities of the state to act as a sure deterrent against the appearance of this preventable disease in these fortunate communities. It has been found, in many cities and counties of California, that the opposition to vaccination is actually not so strong as many have heretofore believed. Any health officer with a sufficient number of public health nurses is enabled to quietly proceed to immunize against smallpox all individuals who may desire such immunization. The procedure is that of routine work rather than a spectacular "drive."

During the six years, 1920 to 1925, 28,592 cases of smallpox were reported in California. Vaccination histories were obtained for all but 443 of these cases. It should be noted that 94 per cent (26,469) of all individuals who suffered from smallpox during this six-year period had never been vaccinated; 5.2 per cent (1452) of the individuals had been vaccinated more than seven years preceding the date of their attacks; .8 per cent (228) of the individuals had been vaccinated within seven years preceding their attacks. There is little left to be said relative to the efficacy of vaccination in the prevention of smallpox.

ACUTE ANTERIOR POLIOMYELITIS.

The calendar year of 1925 brought the largest number of cases of poliomyelitis together with the highest fatality rate of any single year in the history of California; 821 cases, 144 of which proved fatal, were reported in California during that year. In 1924, 192 cases with 34 deaths were reported. The trend of the outbreak in 1925 was sharper

than any preceding outbreak that has occurred in California. The peak was reached during midsummer instead of in the fall, as is generally the case on the Pacific coast. The factors that had to do with changing the trend of the curve of this epidemic are unknown. The California State Board of Health, by means of its efficient morbidity reporting, was able to recognize the approach of the outbreak in the spring of 1925, and immediately issued warnings and advice to the health officers of the state urging them to be on their guard so as to detect cases early

and place them under isolation without delay. A circular letter was mailed to every doctor of medicine and all others practicing the healing art in California. This letter outlined the symptoms of the disease and urged certain precautions in the treatment, such as the necessity for resorting to no mechanical manipulations until after the fever had completely subsided. This outbreak furnished material for an intensive study of poliomyelitis in California. While the results obtained were of course meager and presented no outstanding discovery it is believed that practitioners are now better able to make proper diagnosis of the

disease, thus enabling the early isolation of most cases that may be discovered during future years.

DIPHTHERIA.

The increase in the incidence of diphtheria which was experienced all over the United States in 1924 was felt in California. Never before had so many cases been reported during a single year as were reported in 1924, when 11,110 cases were called to the attention of the State Board of Health. Of these 695 resulted in death. The number of cases reported in 1924 was half as great, 5575, and the death rate showed a corresponding reduction as there were but 266 deaths reported during that year. California has recently suffered the unenviable distinction of having the highest diphtheria mortality rate of any state in the Union. The factors that had to do with bringing this high death rate are unknown. Health officers have been advised that the only feasible method for accomplishing definite results in the prevention of diphtheria lies in the immunization of children by means of the administration of toxin-antitoxin. Since 1924 large numbers of children throughout the state have received immunizations against this disease. In those counties where full-time health units are in operation, the greatest amount of this type of work has been carried on. In many of the smaller cities, where clinics and health centers are active, a very large portion of the children residing in those communities have been successfully immunized against diphtheria. If the administration of toxin-antitoxin is made a regular procedure, carried on from year to year by official health agencies, there is every reason to believe that this disease will ultimately be brought under absolute control. It is essential that this type of work be carried on in every California community for no other procedure in the whole category of public health is productive of any greater or more beneficent results than this. The children of California are entitled to the protection that this procedure affords and all local health authorities are urged to make this work an important factor in their administrative work.

TYPHOID FEVER.

There were 2630 cases of typhoid fever reported in California during the calendar years 1924 and 1925. There were 1856 cases reported during the preceding two years. The increase is due, in part, to a sudden explosive outbreak of the disease in Santa Ana. This outbreak was made the subject of a report printed in the twenty-eighth biennial report of the board. Subtracting the 632 cases that were reported in the Santa Ana outbreak we still have 2000 cases reported during the past two years, which represents a considerable increase over the cases reported during the preceding two years. As a matter of fact, typhoid fever is not being reduced in prevalence in California at the present time as consistently as its prevalence has been reduced year by year during the past decade. We have too many milk borne outbreaks and far too many cases are contracted carelessly by individuals who are making temporary sojourns in the rural districts where the disease is always more prevalent. Some health officers think that we have reached the point of irreducible minimum in the control of this disease. Since many

states are able to maintain a death rate of but 2 per hundred thousand population, however, it would seem that there is great possibility of making further reductions in this state. Water borne outbreaks occur but seldom in spite of the fact that California must depend largely upon surface streams for its water supplies. The fact that water borne outbreaks seldom occur indicates that California cities maintain vigilance in safeguarding local supplies. If more individuals were immunized against typhoid fever and if local milk supplies were placed under more rigid control, the prevalence of typhoid fever in California would be reduced very greatly. Of course, carriers are always prevalent and many are never detected. With the extended development of local health departments it is certain that there is a stronger probability toward the detection of more carriers. On the other hand, a number of practicing physicians residing in rural districts of the state have achieved outstanding results in the discovery of typhoid carriers in

their communities. The state, as a whole, has accomplished outstanding results in the control of this disease, the death rate having fallen from 32.6 per hundred thousand in 1906 to about 4.0 per hundred thousand population in 1925. Spectacular reductions can not be expected but there is need for more intensive routine work in keeping the disease within bounds and in making further reductions in prevalence and in mortality, as well.

In some states, where a considerable number of typhoid carriers have been discovered and placed under supervision, provision has been made for the rehabilitation of such carriers. In Minnesota, for example, a state fund has been made available for use in assisting carriers who must of necessity, change their occupations in order that the public health may not be endangered through their handling of food products. When a food handler is discovered to be a carrier of typhoid, he is obliged immediately to discontinue his trade. This generally means a long period of a new sort of work at low wages and perhaps a period

of unemployment. The use of a state fund for helping such an individual to gain a new occupational foothold would seem to be necessary in many cases that have come to light in this state.

MALARIA.

Malaria is one of the communicable diseases that is not reported efficiently. This is due to the fact that the disease is seldom fatal; it produces a disability but very seldom causes death. A large number of cases, without doubt, are never seen by physicians. Many individuals suffer from the disease without knowing it, and countless numbers resort to self-treatment through the use of proprietary remedies. There were 184 cases reported during the calendar years, 1924 and 1925. During the preceding two years there were 411 cases reported in the state. It is a significant fact that a considerable proportion of the cases reported are found in the metropolitan areas of the state which, in no sense of the word, are malarial districts. Many individuals residing in those sections of the state where malaria is endemic travel to the larger cities, where diagnoses are made. It would seem, as a matter of fact, that there is but a single limited area in the northern part of the great interior valley of California where malaria is unduly prevalent. By concentrating our efforts to control the disease in this limited area we should be able to accomplish marked results in the elimination of this disease from the state. The report of the Division of Mosquito and Malaria Control published in this volume indicates that there is continued activity in the mosquito abatement districts established throughout California. It should be noted, however, that these activities are not confined to those sections of the state where malaria exists. More work in mosquito control is carried on in the salt marsh districts where non-malaria bearing mosquitos flourish. The high assessed valuation of land in the districts around the San Francisco Bay permits the raising of large sums of money by means of tax levies, provision for which is made in the Mosquito Abatement District Act. The low assessed valuation of some of the land in the malarial districts of the state does not permit raising funds that are in any way adequate for carrying on this type of work. In spite of this fact considerable effort has been expended, and with commensurate results, through the extension of state aid to such districts. There is every reason to believe that malaria is in no way as serious a problem in California, at the present time, as it was a few years ago. There is concrete evidence that the disease is gradually being brought under complete control in this state and that within a few years, provided that control work is continued, the menace of malaria shall have been completely removed from California.

SPECIAL MALARIA SURVEY.

In February of 1926, Dr. Paul S. Carley of the International Health Board was detailed to California for the purpose of making a survey in order to determine the extent of malaria in California. It was believed advisable for such a survey to be conducted in order that a check might be obtained upon the results of mosquito and malaria control work that had been carried on within the state during the past ten years.

Dr. Carley's survey which covered about four months of work showed that malaria has decreased greatly in California. He made spleen examinations in 6983 school boys whose ages ranged from 5 to 13 years, it having been determined that spleen examinations in pupils of the public schools would give the most reliable present-day index of the extent of malaria within the state. Dr. Carley found that the areas of maximum endemicity of malaria lie in the northern part of the Sacramento Valley. South of San Joaquin County malaria, to all intents and purposes, is negligible. The survey indicated that practically the only malaria problem in California lies in the territory north of Sacramento County. This does not mean that malaria assumes anything like the prevalence that is noted for the disease in other parts of the country. The problem, however, exists in California but not in any measure comparable to the magnitude that it assumed ten years ago. As a matter of fact there has been a noted decrease in malaria throughout the world. During the past decade Dr. Carley believes that the improvement in economic conditions has had considerable to do with this decrease and it is the personal view of the investigator that, given another twenty years of prosperity such as the Sacramento Valley now enjoys and assuming that factors such as immigration and similar factors remain relatively constant, the disease will disappear from the state.

RABIES.

Three hundred fifty-three rabid animals were reported to the California State Board of Health during the year 1925, and 502 such animals were reported during the year 1924. This means that the disease was 50 per cent less prevalent during the last biennial period than it was during the preceding biennial period. Rabies is extremely prevalent, however, in certain sections of the state. Three-fourths of all cases reported during the last biennial period occurred in the southern part of California. A number of counties are adequately protected against rabies through the operation of control ordinances which are effectively enforced. Adequate uniform legislation for the control of this disease should be enacted and enforced in every county of the state. A county ordinance which provides for the vaccination of dogs against rabies has apparently proved satisfactory in many cities and counties of California. The single detriment to this type of legislation lies in the fact that immunization must be repeated annually in order that it may provide an effective continuous safeguard against rabies. The cost of the immunization is being reduced year by year and there are indications at the present time that vaccination against rabies may soon be placed at so low a cost that no dog owner can afford to do without this safeguard to the welfare of his animals and his family. There were five human deaths from rabies in California in 1924 and two such deaths occurred in 1925. During the preceding biennial period there were eleven deaths of human beings from rabies. It is unfortunate that any deaths from this disease should occur. The remedy lies entirely in the control of the dog population. Unless the various city and county communities within the state show a more determined effort to exercise control measures, rabies will continue to exact its needless toll in human lives. The problem is primarily a local

problem, and unless the different communities concerned take more interest in safeguarding their people against this disease it will be necessary for stringent measures to be adopted in those communities, at the hands of the state.

INFANT MORTALITY.

Lower infant mortality rates prevailed for both years of the last biennial period over those years of the preceding biennial period. The reduction was not marked, however, and there is, as a matter of fact, little change in infant mortality conditions from year to year. San Francisco, Oakland, Berkeley and other cities continue to have remarkably low infant mortality rates. In proportion to population some of these cities rank with those of the Pacific-Northwestern states in maintaining the lowest infant mortality rates of any municipalities in the country. In some California cities, however, the high infant mortality rates are most deplorable. It would seem that there is little or no community pride in making an effort to salvage these human lives. Undoubtedly the most important factor in the reduction of infant mortality lies in securing thorough registration of all births. This is obvious when it is considered that the infant mortality rate is the proportion of deaths of infants to the total number of live births. If all births are *not* registered, but if all deaths *are* registered, the infant mortality rate will of course be correspondingly high. The more thoroughly that births are reported in any community the lower its infant mortality rate will be. Next in importance in the production of a low infant mortality rate is the provision of pure milk supplies for infants, particularly during the summer months. Infantile diarrhea and enteritis constitute the most outstanding factors in the production of high infant mortality rates. No diseases take more infant lives than these intestinal disorders. There is room in most California communities for great improvement in saving infant lives. It must be recognized that some of our communities maintain infant mortality records that are among the best of any that are produced in the United States. Due credit is to be given to those communities for the part that they play in making the infant mortality rate for the whole state low; on the other hand, those communities where no safeguards are provided for infant lives constitute an outstanding factor in retarding California in its efforts to make the infant mortality rate for the whole state much lower than it is at the present time.

SCARLET FEVER.

Scarlet fever showed a slight increase during the last biennial period. There were 14,682 cases reported during the last two years as against 13,442 cases reported during the two years preceding. Other states showed similar increases. The factors in the production of this increase are not definitely known. It would appear, however, that methods of control are lax in many communities. Quarantine very often is not maintained for a sufficient length of time and convalescent cases are given their freedom before suppuration has ceased. It is believed that more strict enforcement of regulations for the control of this disease would produce conspicuous results in reducing its prevalence. This is a serious disease and it would be well for all health officers to regard

it more seriously than they do at the present time. The relatively new procedure of immunization against scarlet fever is not widely used in California at present. With the development of this procedure and its more extended application there is reason to believe that we shall have an effective weapon in the control of scarlet fever. Until immunization against this disease is more generally used there should be no neglect in the enforcement of rigid control measures along standard lines. It is highly important that quarantine be established early and continued in force until there can be no doubt of the complete recovery of the patient.

SEPTIC SORE THROAT.

Although septic sore throat is not a reportable disease in California there are indications that a number of outbreaks have occurred within the state. Streptococcus infections among dairy workers are not uncommon and recent records indicate the appearance of a large number of cases of such infections which were spread through the use of infected milk supply. It would seem that the whole problem of the control of milk supplies on the basis of the role that they play in communicable diseases is a matter for serious consideration. The presence of a number of outbreaks of milk-borne typhoid fever, together with the strong indication that a number of outbreaks of streptococci infection have been spread in this manner, makes the problem worthy of serious consideration by all health departments within the state.

LEPROSY.

The establishment of the Federal Leprosarium at Carrville, Louisiana, a few years ago has done much to relieve California counties of the burden connected with the care of lepers. Every year in California a number of Orientals and Mexicans, for the most part, are found to be suffering from this disease. Whenever such a leper is found, isolation is established immediately and the patient is held until such time as he can be removed to the Federal Leprosarium. The United States Public Health Service has recently fixed November and May as the stated periods during which semiannually all eligible lepers will be moved to Carrville. The California State Board of Health was instrumental in securing the establishment of the Federal Leprosarium and takes no inconsiderable interest in the successful operation of this long needed institution.

BOTULISM.

Limited outbreaks of botulism occur in California occasionally. During the last biennial period 27 cases with 11 deaths have been reported. In 1925 there were but five such cases, four of which resulted fatally. Under the operation of the new cannery inspection division of the California State Board of Health which is charged with the enforcement of the board's regulations for the commercial canning of various products, chiefly vegetables, all danger of botulism from commercially canned products should be eliminated. It is a significant fact that most cases of botulism have occurred through the use of home canned products; the housewife has not the equipment nor the inclination to subject home canned products to a sufficient degree of heat for an ade-

quate length of time to insure the quality of the home canned product. The use of pressure cookers eliminates any danger from home canned vegetables, but unless such apparatus is used there is grave danger in eating home canned products. The division of cannery inspection has devoted its energies to the enforcement of the regulations for the proper cooking, commercially, of olives, spinach, squash, string beans, asparagus and certain kinds of fish. It is possible, now, to determine at what temperature and for what duration of time nearly every pack of commercially canned California products have been held. Reference to the code numbers on the cans provides the key to the entire history of the canning processes used upon the product involved. The enforcement of the board's regulations for the sanitation of canned products, it can be readily seen, is of prime importance in maintaining a high grade of commercial goods which are distributed all over the world. The enforcement of these regulations guarantees the quality of California's commercially canned products and makes impossible the production of disease through the use of canned goods. This activity which was inaugurated in the fall of 1925 is carried on at no expense to the state, as the funds for this work are provided by the canners themselves through an enabling act of the last legislature.

CANNERY INSPECTION.

Probably the most outstanding feature of public health work done by the State Board of Health was the establishment of the cannery inspection division.

The legislature of 1925 adopted what is known as "The Cannery Inspection Act," which requires the State Board of Health to license all canneries which meet the standards adopted by the board in reference to the sterilization of all olives and vegetable products cooked under pressure, with the exception of tomatoes and tomato products.

Following the passage of this act the sardine and tuna packers of the state requested the board to inspect their plants. The division of cannery inspection is financed by the packers and consists of a chief cannery inspector, clerk and thirteen inspectors. An annual assessment on a per case basis of all products requiring inspection is paid by the canners.

The research work necessary for the promulgation of the rules and regulations of the State Board of Health under which this inspection operates was prepared by the Hooper Foundation for Medical Research of the University of California, under the direction of Dr. Karl F. Meyer.

The object of the cannery inspection is twofold, first, to protect the public health from food poisoning due to insufficient sterilization of food products; and second, to assure a high standard, wholesome, edible product.

SEWAGE DISPOSAL.

During the past biennium the activities of the board's sanitary engineers have increased greatly. The work of the supervision of local sewage disposal plants and public water supplies has grown considerably. With no increase in the personnel of the sanitary engineering staff the work has almost doubled. Many very important problems,

such as that which has to do with the disposal of sewage from the thickly populated districts of southern California, chiefly Los Angeles, have been undertaken. One of these problems has required more than two months of intensive work relating to a study of an application for permission to deposit sewage in the Pacific Ocean. It is a significant fact that twelve years ago there were but three or four methods used in the treatment of sewage. At the present time there are more than twenty-six varieties of such treatment in use, each of which is specially designed to take advantage of certain unique local peculiarities. Stream pollution in California has been lessened greatly and the prospects are excellent for the ultimate elimination of sewage from California streams, or at least for the application of necessary treatment which will definitely prevent the contamination of such streams. The number of treatment plants for water supplies has grown continuously, particularly for such supplies as find their sources in surface and other dangerous waters.

The enforcement of regulations pertaining to the sanitation of swimming pools has involved a large amount of work during the biennial period. During the past two years there has been a marked improvement in the sanitary design of swimming pools. This has a direct bearing upon the transmission of many communicable diseases and is of first importance from the standpoint of sanitation. New standards for the proper disposal of sewage at beaches and other watering places where aquatic recreation is enjoyed have been formulated and enforced.

Regulations for the sanitation of oyster beds have also been adopted and certificates are given to the owners of oyster beds which conform to the regulations.

The sanitary engineers of the board have been able to save large sums of money to California cities and the technical assistance rendered by these engineers is appreciated fully by the officials of the smaller cities, particularly.

THE HYGIENIC LABORATORY.

The certification of public health biological laboratories has accomplished considerable in stimulating the establishment of adequate laboratory service in communities which heretofore have necessarily depended upon the state for the performance of routine biological examinations. Laboratories which conform to the standards set are provided with certificates, which are effective for the calendar year only. The annual inspection of such laboratories, alone, is valuable in the maintenance of high standards. This is of importance in the maintenance of public health, for diagnosis of communicable disease depends, to a very great extent, upon accuracy of diagnosis, which can be obtained only through the use of sound laboratory procedure. The State Hygienic Laboratory makes examinations only for cities and counties that are unable to finance the installation and maintenance of laboratory service, and in handling examinations for which the smaller laboratories are not equipped. The state laboratory is available at all times to perform routine service for the rural districts and for small cities where no laboratory service may be available.

GENERAL SANITATION.

The staff of the division of sanitary inspection has accomplished a large amount of work in the improvement of general sanitary conditions throughout the state. The sanitation of automobile camps and the inspection of wayside eating places, summer resorts and similar places, has provided an essential service rendered in behalf of the traveling public. The improvement of sanitary conditions in automobile camps during the past three years is noteworthy. This improvement is recognized by automobile clubs, automobile camp owners' associations, local civic organizations and other state health departments, all of which have expressed their commendation of this work. A large number of insanitary camps have been closed permanently, but the most important accomplishment of the board's sanitary inspectors lies in the improvements that have been instituted as a result of the advice and assistance given by the inspectors.

The board's entire staff of sanitary inspectors was assigned to Los Angeles during the plague emergency existing there during 1924 and 1925. The diversion of this corps of trained men to Los Angeles, where they were engaged in training local men in the details of sanitary inspection as related to the control of rodents, was of great importance in bringing the plague outbreak under control. Similar work was carried on in San Luis Obispo County and other portions of the state where surveys of plague in rodents were carried on, through the assistance of county horticultural commissioners, health officers and other officials. It is believed that the general good sanitary conditions in California at the present time are due in no small measure to the work of the state's sanitary inspectors.

CHILD HYGIENE.

The report of the Bureau of Child Hygiene indicates the importance of safeguarding the health of the preschool child, in discovering physical defects in the child of this age period, and in securing the removal of such defects before the child enters school. Millions of dollars are being spent in California upon elementary education. If children are not physically fit to receive this education the waste of money becomes enormous. From the standpoint of economy, alone, nothing can be of greater importance than the provision of every facility that makes for the health of the child who is about to enter school. To be sure, it is of great importance that after entering school every safeguard for the protection of the child's health be provided, but if adequate provision is made for maintaining the health of the child of preschool age there is every reason to believe that the health of the child after he enters school may be maintained much more easily and at far less expense.

The service that the bureau has rendered in providing conferences for the physical examination of infants and young children is noteworthy. The instruction given to mothers at these conferences is of the utmost importance. Through the provisions of the Federal Maternal and Infant Welfare Act the scope of work undertaken by the Bureau of Child Hygiene has been widened greatly. Through the

activities of the bureau many public health nurses have been added to the personnel of local health departments.

In compliance with the duties imposed upon the bureau through the enactment of legislation at the last session of the legislature, the licensing of maternity homes, following their inspection, has been undertaken. Licenses have been given to 173 such institutions; this work is about half completed and it is believed that the year 1926 will find the entire field covered, with licenses granted to all maternity homes that comply with the regulations of the board.

FOODS AND DRUGS.

The Bureau of Foods and Drugs is responsible, to a large extent, for the quality of food supplies purchased by the state for consumption in state hospitals and other institutions. The state demands that its wards be given good quality of foodstuffs, and requires of vendors that they comply exactly with the contract arrangements by which foodstuffs of first quality are delivered. All deliveries of such products are checked by the Bureau of Foods and Drugs in order to determine that these conditions have been complied with.

The work of the bureau has been concerned more, during recent years, with providing a service that would improve the quality of food products at the source of manufacture. For many years a campaign of education was conducted, by means of which many small dealers, whose displayed products did not comply with the pure food laws, were summoned before the board for hearing. It is the present policy that this campaign of education has served its purpose and that hereafter the efforts of the board are more wisely directed toward the improvement of food supplies at their sources. The extent and variety of the work undertaken by the bureau may be understood by reading the detailed report submitted in this volume.

BUREAU OF TUBERCULOSIS.

It is doubtful if any state provides better county institutional care for its tuberculous than does California. The county tuberculosis hospitals have been raised to a high degree of efficiency. Many of these county institutions provide much more elaborate equipment than most private institutions. Because of the high standards set, the so-called stigma of securing treatment in a county institution, on the part of those who are unable to pay, have been completely removed. The tuberculous are assured of securing adequate hospital attention and treatment in county tuberculosis hospitals in California as they would obtain in any private institution. This factor is of the utmost importance in tuberculosis control and the state may take a justifiable pride in the high standards maintained in these institutions. The other activities of the bureau, such as work among exservice men, occupational therapy and other activities are well outlined in the detailed report of the bureau.

REGISTRATION OF NURSES.

Nurses in California are insistent in their demands that high educational standards be maintained among those who practice the profession

of nursing. The examinations given by the bureau each year comply with this desire of the nurses themselves that high standards be maintained. To obtain a certificate as a registered nurse in California means a great deal to the nurse. It means that she has received adequate training and that she has passed successfully a rigid examination testing her qualifications as a nurse. There is no diminution in the interest that nurses maintain in this essential activity.

Under the act of the last legislature the accumulated earnings of the bureau have been diverted into an endowment fund, by means of which a chair of nursing education will be established in the University of California. This will go far toward raising nursing standards still higher in California and is a satisfactory solution to all concerned for putting these earnings to work in the perpetual interest of nursing education.

PUBLIC HEALTH NURSING.

The California State Board of Health has, during the past two years, acting under the sections of the Political Code which give it due authority, given examinations for certificate as public health nurse to 327 candidates. Of this number 290 have successfully passed the examinations and have been granted certificates. The importance of the public health nurse grows from year to year. The exact number of such nurses who are employed at the present time in California is not known exactly, but it is believed that there are fully eight hundred such nurses who are continuously employed in public health nursing. A few years ago there were not more than six or eight such nurses in the State of California who were gainfully employed in the practice of their profession. This remarkable growth within a short space of time is indicative of the great hold that this type of work has taken upon the general public. No health department can function satisfactorily without the services of public health nurses. They supply a demand that is insistent and continuous. As time goes on their importance increases rather than diminishes. Any community which overlooks the service that can be provided by public health nurses is neglecting one of the most important fields of its work.

VITAL STATISTICS.

The state registration of births, deaths and marriages has been in effect since 1905. With the continued growth of population the volume of work undertaken by the bureau increases from year to year. The volume is far greater at the present time, naturally, than it has ever been before. In past years the board has been enabled to make detailed analyses and tabulations of the data collected. These tabulations were formerly published in the biennial reports. Their volume and bulk is so great at the present time that it is not feasible to publish them. Investigators and research workers, as well as individuals, who may desire detailed information concerning the demography of their local communities, can always obtain such detailed information as may be available by corresponding with the registrar of the Bureau of Vital Statistics at Sacramento. The application of vital statistics to community health problems provides the only reliable index leading to the institution of remedial measures. The importance of using the facilities

of this bureau can not be underestimated. The proper application of the vital statistics tabulations and the making of detailed analyses is difficult to perform with any degree of infallibility. Vital statistics constitute but an index toward actual conditions. California communities that make use of the facilities provided by the state may secure valuable information leading to greater efficiency in the administration of local health affairs.

EPIDEMIOLOGY.

The activities of the division have been directed largely to epidemiological investigations and diagnostic consultations, the latter being made on special requests from health officers and practicing physicians. The number of such investigations are set forth in tables accompanying this report.

In January, 1926, a public health nurse was assigned to the division for special work in connection with trachoma survey in Imperial County. The service of the public health nurse has also been of great value in conducting the follow up work in several typhoid epidemics and in instructing members of households in methods of concurrent disinfection. The organization and management of immunization clinics has fallen largely to the duties of the public health nurse.

The collection of morbidity reports has multiplied in volume and increased in value. The information available from the morbidity records has proven of great value to local health officers, universities and health officials throughout the country. The tabulation of data and the preparation of charts and graphs have enabled the division to become a center for the distribution of data pertaining to the prevalence of communicable diseases throughout the state and not to act simply as a repository for morbidity reports.

SOCIAL HYGIENE.

Although an active organized bureau for carrying on social hygiene work is not functioning in the State Board of Health at the present time, a considerable amount of work relating to the control of the venereal diseases is carried on under a very small grant received from the Federal Government. This grant is a part of a residue appropriation from war days. A table outlining and summarizing the work of the venereal disease clinics operating in California is printed in another portion of this report. Reference to this table shows that nearly 22,000 cases of syphilis were reported to the State Board of Health during the past two years and almost 17,000 cases of gonorrhea; 244,000 treatments of arsephenamine were administered in the fourteen clinics reporting; 95,000 Wassermanns were performed in the cooperating clinics and in the State Hygienic Laboratory. A total of more than 70,000 pamphlets relating to venereal diseases were distributed by the State Board of Health during the past two years; practically all of these pamphlets were publications issued by the United States Public Health Service.

DISTRICT HEALTH OFFICERS.

By means of the services rendered by the two state district health officers, one in Los Angeles and the other in Sacramento, a large num-

ber of conflicts in local public health administration were settled satisfactorily. They are called upon frequently for public addresses but their chief activity lies in reconciliation of state and local health work, administration of public health laws and the establishment of reciprocal relations between local health officers. These officials have rendered valuable service to the State Board of Health and their locations at opposite ends of the state enable them to cover the entire state territory with efficiency and at a minimum of expense.

WALTER M. DICKIE, M.D.,
Secretary and Executive Officer.

REPORT OF DISBURSEMENTS.

Seventy-sixth and Seventy-seventh Fiscal Years, July 1, 1924, to June 30, 1926.

REPORT OF DIVISION OF EPIDEMIOLOGY.

July 1, 1924, to June 30, 1926.

CHARLES H. HALLIDAY, M.D., Epidemiologist.

SMALLPOX.

The mild strain of smallpox has existed throughout the state for several years and malignant smallpox has occurred in three widely and unassociated epidemics.

The first malignant smallpox epidemic occurred at Fresno in the fall of 1924. The first case in the epidemic was not definitely traced but the evidence pointed to it being of Mexican origin, probably arriving at Fresno among the itinerant laborers. The city of Los Angeles experienced a severe epidemic of malignant smallpox and there, as at Fresno, the first case was of Mexican origin. With the appearance of malignant smallpox at Fresno, the city and county health officials, assisted by the State Board of Health, organized immunization centers and carried their activities to surrounding counties. By those measures the epidemic was confined to the limits of the original focus. The city of Los Angeles, with the assistance of the local physicians, organized immunization clinics and they have estimated that 250,000 reported for immunization. Health officers in all sections of the state were kept informed as to the situation in Los Angeles and while several cases of the malignant type escaped to other sections, by prompt action the local health officials were able to prevent its spread.

The third epidemic of malignant smallpox occurred at San Francisco. The original case was imported from the Orient aboard a transpacific liner, the diagnosis being hemorrhagic measles. This case was removed from the ship and taken to a local hospital. Eleven of the hospital staff developed the disease, one of which terminated fatally. The original case died within twenty-four hours of arrival at the hospital. The body was sent to the coroner's and from there to an undertaking parlor. In all, 18 cases developed, distributed as follows: 11 at hospital, 1 first-class passenger aboard the ship and 6 at the undertaking parlor.

The vaccination histories in these cases were as follows:

		<i>Never successfully vaccinated</i>	<i>Vaccinated within 7 years</i>	<i>Vaccinated over 7 yrs. previously</i>
Hospital Staff.....	11	1	1	9
First Class Passenger..	1	1	-	-
Undertaking Parlor....	6	3	1	2

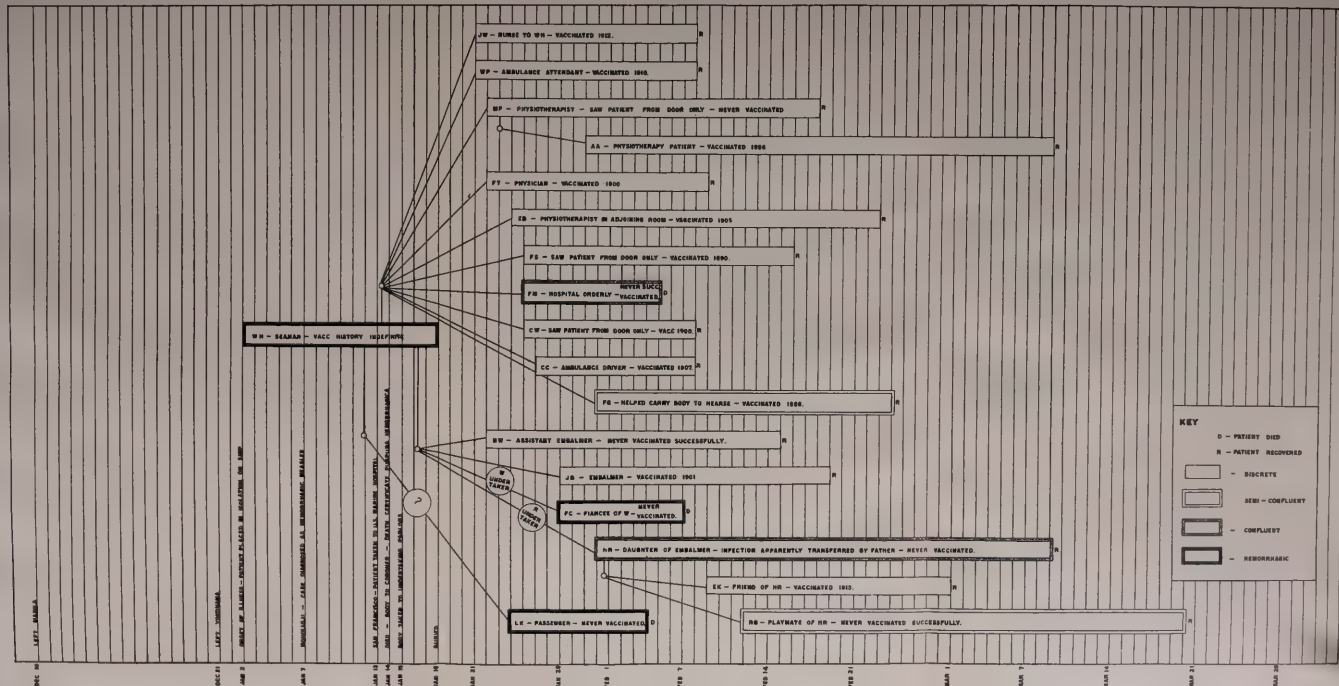

Immunity to smallpox is something to be desired, for only in this way can community protection be accomplished. Immunity campaigns should be conducted along well organized and orderly lines. The keeping of proper records and readings of reactions are all important. *Failure to observe reactions is responsible for much futile revaccination and groundless complaints of inert virus. Proper interpretation of the type of reaction will do much to save time, simplify administrative control and to enhance public appreciation of the desirability of small-

1926

pox immunization. Public inertia is likely to be overcome, not by appeals or demands to be vaccinated, as by the exhortation to have immunity to smallpox tested. If you are immune it will not take—if you are not the test will remedy that defect.

PLAGUE—LOS ANGELES.

The epidemic of pneumonic plague at Los Angeles in October and November, 1924, like most epidemics was well advanced before it came to the attention of the health officials. The field investigation established definite contact between all the pneumonic cases with one excep-

tion and in that case the evidence was only presumptive. It was not until several cases had been admitted to the hospital that the true nature of the disease was recognized. The second case and the first upon which an autopsy was held, was originally diagnosed as lobar pneumonia, its true pathologic nature being confirmed on a review of the tissues, after the large group had been proven to be pneumonic plague by autopsy and bacteriological findings.

The complete epidemiological investigation proved beyond much question of doubt that the first case of plague to occur in the district was a pestis minor in an adult male, with date of infection about one month prior to the explosive outbreak of pneumonic plague in the same district—also that the daughter of this patient died of pneumonic plague. It was also proven that this epidemic was of rat origin, the first pneumonic plague outbreak to be traced to that source. Contact with squirrels was not established with the pneumonic cases or the subsequent cases of bubonic plague which occurred in Los Angeles. One other case of pestis minor occurred in one of the contacts with a fatal case of the pneumonic type. The disease in that case was limited to the tonsils with an associated cervical adenitis of moderate severity and was classed as a case of tonsillar plague.

Thirty-two cases of pneumonic plague developed among the original group. Of this number, thirty terminated fatally. The total duration of the epidemic was twenty-one days. The average duration of the illness before admission to the hospital was three days, the average duration from onset to death was five days, but one case was proven plague by autopsy after twelve days' hospitalization. The two recovered cases of pneumonic plague and the three cases of bubonic plague to recover, all gave a positive agglutination test six months after they were released from the hospital.

The chief symptoms complained of in order of frequency of occurrence were, fever ranging from 100° to 106° , expectoration with blood-stained sputum, cough, pain in the chest, headache, generalized pain all over, vomiting, pain in the back and upper abdomen, malaise, epistaxis and chilliness without sign.

The physical findings were large coarse rales in the chest, thickly coated tongue, reddened throat, dyspnea, impairment of the percussion note over chest, restlessness, prostration, delirium, very weak, rapid pulse, cyanosis, a systolic murmur, localized adenopathy, conjunctival injection, increase in spinal fluid pressure with signs of meningismus in children, jaundice and a macular rash.

Eleven bodies were autopsied, all showed a confluent broncho-pneumonia in widely varying degrees with signs of a very severe infection. Blood cultures from nine other patients showed gram negative bipolar staining bacilli, with comparatively few pus cells.

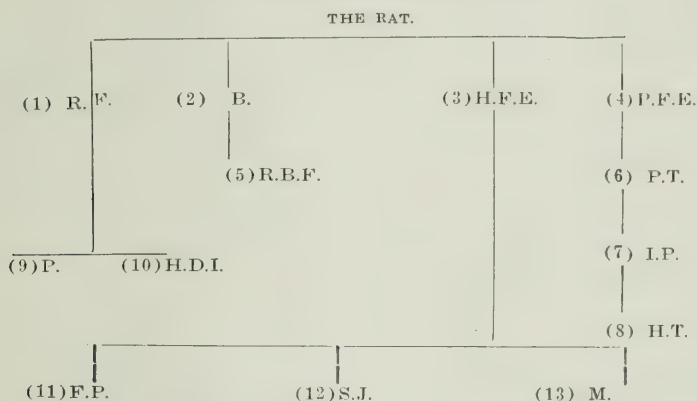

In addition to the cases above referred to seven cases of bubonic plague occurred in Los Angeles from October, 1924, to January, 1925. No additional cases have occurred since the last case, January 11, 1925. Two of these cases occurred in one home; two were in the same locality, separated only by a few houses. The others were widely separated. All were of rat origin.

The large number of rodents showing lesions of chronic plague indicates that the disease has existed among the rodents of Los Angeles and vicinity for many years. The organisms obtained from rodents were nearly all of low virulency and this in connection with the low average of flea infestation of rodents probably explains the comparatively few numbers of human cases to develop. Fleas identified were: *ceratophyllus*, *xenopsylla cheopis*, *ctenoccephalus canis*, *ceratophyllus acutus*, *hoplopsyllus anomalus* and *echidnophaga gallinacea*.

The plague outbreak in Los Angeles only emphasized the necessity for all seaport cities to give their health departments unlimited support in plague prevention and proves the wisdom of the secretary in repeatedly recommending appropriation for plague eradication measures.

While plague is the outstanding disease which from a public health standpoint demands a constant warfare against rats and squirrels in this state, other diseases of rats transmissible to man are of importance as illustrated by the following table:*

Human Diseases Spread by Rats.

During the epidemic 85 special investigations were made in Los Angeles to determine the diagnosis of cases reported as suspected plague.

POLIOMYELITIS.

California has experienced several epidemics of poliomyelitis. The epidemic years were 1912, when 531 cases were reported, the peak of the epidemic occurring during the months of July and August, from 1913 to 1914 inclusive. The number of cases reported were below a hundred during any of the years; the year 1916 shows a small epidemic of 130, the epidemic having its onset in July with 12 cases and the number of cases per month increasing gradually until December when 25 cases were reported. Not until 1921 was there a marked increase, during that year 283 cases were reported, September being the peak month. During the year 1923, 251 cases were reported, the epidemic manifesting itself late in August and continuing into December. The year 1924 showed the largest number of cases for any inter epidemic year, there having been reported during the year, 192 cases, 51 of the cases occurring in October.

The year 1925 was ushered in with what may now be considered as a forecast of an epidemic, 17 cases occurring in January, in February 14 cases were reported, 11 in March and 29 in April; the number of cases per month steadily increased, July, August and September having 204, 200 and 105, respectively. For the year 1925, 821 cases of this disease were reported for the entire state.

In June, 1925, the situation was considered to be serious enough for the board to give public announcement that an epidemic of poliomyelitis existed in the state. Early in July the following letter was mailed to every physician in the state:

DEAR DOCTOR:

Acute anterior poliomyelitis, commonly known as infantile paralysis, is epidemic in California at the present time. The situation, in fact, is growing worse. Seventy-nine cases were reported in this state during the month of June, 1925, making it nearly twenty times more prevalent than it was during the corresponding month of 1924. Furthermore, many severe types of paralysis are occurring, and the percentage of fatal cases is very high. Many cases are not recognized as acute anterior poliomyelitis. Physicians are calling these cases "bulbar paralysis," without recognition of the serious and highly contagious nature of the disease. For these reasons, this circular letter is being sent to all practitioners in order that cases may be recognized and placed under control without any untoward delay.

It has been observed that in those years when poliomyelitis becomes unusually prevalent in the late spring and early summer, there is nearly always an extensive and disastrous outbreak of the disease in the late summer and early fall, when, under normal conditions, the disease is seasonally more prevalent. The prompt institution of control measures at the present time, therefore, is of the utmost importance in order that the chances for a widespread epidemic during the coming fall may be minimized.

Poliomyelitis, perhaps, is one of the most common of the communicable diseases. Since paralysis occurs, however, in but a small percentage of cases, proper diagnosis is very often not made. Whenever the disease becomes epidemic, all cases of sudden, acute illness in children must be regarded with suspicion. It should be remembered that poliomyelitis is not essentially a disease of the central nervous system. It is only in a relatively small number of cases that there is any invasion of the central nervous system. Paralysis is purely an accidental and incidental occurrence, and in reality it occurs rarely. Seventy or eighty per cent of all cases of this disease present merely

the aspect of an acute generalized affection without sign of injury to the central nervous system. Environment and social conditions have little bearing upon the appearance of the disease, and it occurs as commonly in sparsely settled rural districts as in crowded cities. It is caused by a filterable virus which is unknown apart from infected human beings. This virus possesses a high degree of resistance, both to cold and to ordinary degrees of heat, for long periods of time. If enclosed in albuminous matter it withstands drying quite readily. Since it can withstand both moist and dry conditions, it can easily be carried into the respiratory tract as a spray produced by coughing, sneezing, etc. It is doubtful if agents, other than man, play any conspicuous part in the transmission of the disease. Poliomyelitis is a human borne, contagious infection, with its portal of entry in the upper respiratory tract, especially in the naso-pharyngeal mucous membrane.

For the sake of safety, cases of severe intestinal disturbances or of common colds, occurring especially in young children, at the present time should be regarded with suspicion. They should, accordingly, be isolated without delay and isolation should be maintained at least until the nature of the illness is definitely determined. The age of the patient should not be considered in making diagnosis. While most cases occur in children around two years of age, many adolescents and young adults are attacked. The younger children seem to weather the acute stages better than adolescents and young adults, among whom the death rate is especially high. Since the adult carrier is known to play an important part in the transmission of the disease, it is important that whenever a case of poliomyelitis occurs in a family, all members, as well as other contacts, be isolated for two weeks, as required under the regulations of the California State Board of Health. Cases of poliomyelitis must be quarantined for a period of three weeks.

Cases suspected as those of poliomyelitis should be reported to the local health officer without delay. Your cooperation in this matter is of the utmost importance, in order that the children of California may receive the protection to which they are entitled.

Yours very truly,

WALTER M. DICKIE, M. D.,

Secretary.

The response to this letter was instantaneous and the hearty cooperation received from the profession undoubtedly played an important part in preventing a much larger number of cases.

A month previous to the 1923 epidemic the attention of this division was called to the occurrence of a number of ill-defined cases, manifesting themselves mostly by headache, slight stiffness of the neck and temperature and in many cases, a spinal fluid released under pressure and showing an increase in cell count, the cases recovering without apparent untoward results after three or four days' illness. At that time an opinion was ventured that the disease might be poliomyelitis and an epidemic at a later date should not be surprising. Such an expression of opinion may have been a guess, but such cases occurring previous to an epidemic in this state and others appears to be more than a coincidence. Early in 1925 there appeared throughout the state local epidemics of an acute bronchial disturbance, the disease lasting three or four days, leaving the patients more or less prostrated. Whether these preliminary waves are in any way connected with poliomyelitis is one of the many epidemiological questions yet to be answered, in connection with this intensively interesting disease.

The investigations of individual cases during 1925 were far too few to warrant an analysis of symptoms. However, it may be definitely stated that the onset of the disease was with well pronounced prodromal symptoms, the paralysis appearing generally on the third day after onset,

All of the cases reported were those showing paralysis. If the terms abortive or systemic invasion are accepted, then it may be definitely stated that multiple cases in a home was the rule. Many of these abortive cases have been examined several months after the acute illness and diminished or absence of reflexes has always been demonstrated, associated with some impairment of one or more muscle groups.

The age groups for the 1925 poliomyelitis epidemic were as follows:

-1	1-4	5-9	10-14	15-19	20-24	25-34	35-44	45-54	55+	Adult	Total
35	291	210	150	66	23	24	7	2	1	1	810*

*11 cases did not give the age.

While opinions differ as to the value of isolation of acute cases as a preventive measure in the control of this disease, it is worthy of note that in many localities where the first case was promptly isolated, no secondary cases occurred in the community.

TRACHOMA.

Trachoma has been known to exist in California for a number of years. Exclusively of the Indians, the disease has not been given very close supervision until recent years.

During the early months of 1926, a survey of trachoma was made in Imperial County, where reports indicated that the disease had become a serious health and economic problem.

To avoid confusion usually resulting from diagnostic controversy as to whether the eye condition was trachoma or follicular conjunctivitis, a definite basis for diagnosis of trachoma was first determined. It was to be regarded as a distinct pathologic entity. That it exists in acute and chronic forms; that it is specific for one kind of tissue; that its spread is usually from the affected to the well and that the disease has the appearance of an infectious process.

In conducting the eye examinations, the following classification was followed: *One* indicating a normal eye, *one minus* a slightly inflamed eye, a *one plus* a definite conjunctivitis, *one plus plus* trachoma of moderate severity and *two plus* advanced trachoma. The *one plus plus* cases represent the papillary form, where large numbers of small elevations were seen upon the greatly thickened conjunctiva, giving the latter a velvety appearance. The *two plus* cases represent the granular form, which presents a preponderance of trachoma granules.

Number of pupils examined	8,448	
Number of cases of trachoma found		558
Number of cases trachoma operated		85
Number of cases trachoma otherwise treated		473
Total		558

Trachoma incidence in Imperial County 6.6%.

Of the 558 cases of trachoma found, 95 showed involvement of one lid, 152 involvement of the lower lids only and 311 showed involvement of the upper and lower lids of both eyes. Among school children, the acute form of trachoma with purulent discharge and photophobia was not observed in localities where clinics had been established by the county health officer. In cities not having maintained clinics and in homes among the preschool group, who had not received treatment, this form of the disease was common.

Coexisting local diseases were noted to exist, *e. g.*, otorrhea, nasal infections, pharyngitis, carious teeth, adenoids and diseased tonsils, and suggest themselves as predisposing factors. While a few cases of trachoma were discovered among the well-to-do, social conditions appear to play a significant part. The disease was commonly associated with unfavorable living conditions.

Multiple cases in one family were the rule. A child in one school room with trachoma was frequently found to have one or more brothers or sisters in another room affected with the disease. In the homes, a father or mother was frequently found with the disease.

Race, age and sex do not appear to be an important factor.

Totals by Races.

<i>Race</i>	<i>Number examined</i>	<i>Trachoma</i>	<i>Per cent</i>
Whites -----	4,828	256	5.30
Mexicans -----	2,923	236	8.07
Japanese -----	310	54	17.40
Negroes -----	387	12	3.10
Totals -----	8,448	558	6.60

Males and females were found to be about equally affected and children of the grammar school age, 5 to 14 years, were found to have suffered most.

In viewing the trachoma situation in the state as a whole, there are several problems to be comprehended.

First, the Mexican problem. New cases may be expected to be imported from across the border, and secondary infections to develop from this class. Second, importation of cases from other states, especially Oklahoma, Texas, Missouri, Arkansas and other southern states. Many families recently arrived from those states were found to have trachoma and stated they had suffered from the disease before leaving their former homes. Third, the Oriental and European emigrant, from localities where the disease is prevalent. This class contributes its quota to the existing trachoma incident throughout the state. Fourth, the migratory habits of the Mexican and average laboring class coming into the state. This class follows the crops from the Mexican border to the northernmost limits of the state, living under the most unfavorable conditions and placing their children in the school district where ever working. Trachoma cases are thus transported up and down the state, the infected thus coming in contact with all classes of society.

In giving consideration to the prevalence of trachoma throughout the state, several factors are to be considered. The cases have been found mostly among people who have come to the state from localities where the disease has been known to exist; the majority of the cases occur among those whose living conditions and personal hygiene are below standard; the disease is more prevalent in those parts of the state where the inhabitants are subjected to extreme heat, hot winds and sand storms. The latter may explain in part at least, that a number of trachoma cases are known to have suffered from a definite conjunctivitis sometime before trachoma developed. Whether the disease increases in proportion with the increase of flies and insects or whether it is in any way connected with pinkeye of animals are problems to be solved.

During the epidemiological investigations it has not been possible to establish a coexisting chronic urethritis or chronic vaginitis among the inmates of households where trachoma cases were found. Nor was it possible to demonstrate cell-inclusion bodies from eye discharges or material obtained after operation.

There appears to be a growing belief that trachoma is not as highly contagious as generally believed. However, it is still regrettably common and probably the best solution for the problem at this time is the establishment of clinics and arrangements for its treatment.

THE MILK BORNE EPIDEMIC OF TYPHOID FEVER

TYPHOID FEVER.

During the period covered by this report 2630 cases of typhoid have been reported. Of this number 314 cases were water borne, occurring in epidemics of more or less magnitude. Of these water-borne cases 308 occurred during the epidemic at Santa Ana. Sporadic cases of typhoid fever, due to water supplies, were largely traceable to infections taking place in rural districts.

A total of 483 cases, definitely traced to milk supplies, were distributed as follows: Calexico 78, Dunsmuir 15, Eureka 4, Orange County 186, Pleasanton 7, Santa Paula 48, Stockton 80, Walnut Grove 21, Weed 17, Westwood 27.

The source of infection of each dairy was traceable either to acute cases of typhoid among the milk handlers on the dairy or chronic carriers. In each instance where the milk was found to be involved pasteurization of the milk supply was ordered and a prompt cessation of the outbreak resulted.

Approximately 800 typhoid cases were investigated during the last two years. As a result of the investigations of typhoid epidemics a total of about 3000 typhoid immunizations were obtained in the various localities where typhoid epidemics occurred.

Diagnostic Investigations.

The following investigations were made to confirm or establish diagnoses:

1924—After July 1st.

Botulism: Vallejo.

Diphtheria: Oxnard.

Dysentery (bacillary): Knightson.

Plague: Selby.

Poliomyelitis: Nevada City, Long Beach, Davis, Oakland, Pinole.

Smallpox: Long Beach, Santa Catalina Island, Meridian.

Typhoid Fever: Pasadena.

Miscellaneous: Visalia, chronic conjunctivitis; San Francisco, tetanus; El Cerrito, carbon monoxide poisoning.

1925.

Botulism: Los Angeles County.

Chickenpox: Yolo County.

Diphtheria: Albany.

Dysentery (amebic): Rialto.

Dysentery (bacillary): Victorville.

Leprosy: Fresno, Walnut Grove, Los Angeles, Los Angeles County.

Plague: Glendale, Los Angeles, Merced, Riverside, Hollister, San Luis Obispo.

Poliomyelitis: Santa Paula, Modesto, Claremont, Los Angeles, Oxnard, Riverside County, Perris, Pasadena, Orange, Santa Ana, Orange County, Long Beach, Chino, Alhambra, Palo Alto, Stanford, Glendale, Hanford, Modesto, Inyo County, Oakland, Merced, Butte County, Fresno County, Pixley, Beverly Hills, Santa Monica, Culver City, Richmond, Fresno, Alameda, Piedmont, Alameda County, Berkeley, San Rafael, Ojai, Lincoln.

Scarlet Fever: Glendale, Pasadena, Turlock.

Smallpox: Sonoma County, Alameda, Oakland, Pasadena, Glendale, Santa Paula, San Mateo, Azusa, South Pasadena, Davis, Lincoln, Inglewood.

Typhoid Fever: Gilroy, Ventura.

Miscellaneous: Huntington Park, scabies; Anaheim, human glanders; Los Angeles, Rocky Mountain spotted fever; Los Angeles, anthrax; Los Angeles, undetermined poisoning; Suisun, diarrhoea; Gilroy, stomatitis; Berkeley, undetermined illness, also epidemic meningitis.

1926—To July 1st.

Botulism: Santa Ana, Los Angeles.

Chickenpox: Pacific Grove, Pasadena, Glendale.

Diphtheria: Merced County.

Leprosy: Placer County, Sonoma County, Los Angeles, Burbank, Fresno.

Plague: Riverside, Los Angeles.

Poliomyelitis: Oakland, Berkeley, Glendale, Sonoma County, Fresno County, Fresno, Palo Alto.

Scarlet Fever: Rio Vista, Butte County.

Smallpox: Burbank, Pasadena, Alameda, Inglewood, Long Beach, Glendale, Lincoln, Oakland, Culver City, North Sacramento, Santa Clara County, Esparto, Monterey County.

Miscellaneous: Long Beach, German measles; Imperial County, trachoma; Oakland, Rocky Mountain spotted fever.

Epidemiological Investigations, With Cases Seen.

Botulism—1924, after July 1st.

Los Angeles	6 cases
Glendale	1 case
Oakland	1 case
Loma Linda	1 case
Van Nuys	2 cases
1925.	
Mendocino County	1 case
Los Angeles County	2 cases
Huntington Park	1 case

Chickenpox—1925.

Monterey County.

Diphtheria—1924, after July 1st.

San Bruno.	1925.
Daly City.	Glendale.
Selma.	Modesto.
San Mateo.	Santa Ana.
Turlock.	Roseville.
	Lomita Park.

1926 to July 1st.

Lomita Park.

Dysentery (bacillary)—1925.

Riverside	3 cases
1926.	
Avalon	8 cases
Lindsay	200 + cases H.R.Y.
Porterville	200 cases H.R.Y.
Exeter	Few cases H.R.Y.; others not classified according to type.

Food Poisoning—1924, after July 1st.

Los Angeles City	50 cases
Los Angeles County	86 cases
Lansdale	5 cases
1925.	
Oakland	1 case
San Francisco	4 cases
1926.	
Long Beach	2 cases
Napa	4 cases
Los Angeles County	1 case
Covina	50 + cases
Los Angeles	5 cases

Plague—1924, after July 1st.

Rodent plague:	
San Luis Obispo County.	
Los Angeles City.	
Los Angeles County.	
Human plague:	
Los Angeles City and County	32 pneumonic cases, 5 bubonic cases.
1925—Rodent plague:	
Los Angeles City and County.	
Human plague:	
Los Angeles City	2 bubonic cases.

Polioomyelitis—1925.

Los Angeles.
Orange County.
Inyo County.
Rio Vista.
Blythe.

Rabies—1925.

Animal rabies:
Kern County.
Glendale.

1926.—Human rabies:
Huntington Park.

Scarlet Fever—1924, after July 1st.

Gilroy.
1925.
Monterey County.
Gridley.

Smallpox—1925.

Orcutt	10 cases
Ojai	general epidemic
Tehama County	5 cases
Calpine	17 cases
Glendale	5 cases
Siskiyou County	40-50 cases
Los Angeles	epidemic of virulent type
Roseville	epidemic

1926, to July 1st.

Long Beach	9 cases
Fair Oaks	4 cases
San Francisco	20 cases
Brawley	13 cases
Woodland	10 cases
Stanislaus County	18 cases

Trichinosis—1925.

Taft	2 cases
1926.	
Glendale	2 cases

Trachoma—1926.

Imperial County, including all incorporated cities.

Typhoid Fever—1924, after July 1st.

Benicia	10 cases
Los Angeles County	7 cases
Shasta County	4 cases
Moorpark	4 cases
Simi, Ventura County	1 case
San Diego	3 cases
Dixon	1 case
Visalia	6 cases
San Jose	5 cases
Westwood	42 cases
Placerville	3 cases
Susanville	4 cases

Typhoid Fever—Continued.

1925.		1926.	
Norwalk State Hospital	2 cases	San Leandro	1 case
Kern County	2 cases	Sunnyvale	3 cases
Pittsburg	3 cases	Pittsburg	4 cases
Saratoga	5 cases	Rio Vista	1 case
Turlock	1 case	Calaveras County	6 cases
Inyo County	6 cases	Callexico	76 cases
Walnut Grove	21 cases	Albany	2 cases
San Leandro	6 cases	Saranap	3 cases
Alameda County	1 case	Pleasanton	7 cases
		Santa Paula	27 cases
		Weed	18 cases

REPORT OF DIVISION OF SANITATION.**July 1, 1924, to June 30, 1925.**

EDWARD T. ROSS, Chief Sanitary Inspector.

From November 4, 1924, to June 6, 1925, the entire personnel of the Division of Sanitation assisted in the enforcement of measures instituted for the control of bubonic plague in the city of Los Angeles and adjacent territory. This work consisted of the trapping and poisoning of rats, shooting and poisoning of ground squirrels, the elimination of rat harbors, wrecking of the rat-infected buildings, removal of wood floors and passageways, and the rat-proofing of buildings; also the disinfection of buildings for the destruction of fleas in districts where the disease was found to exist. The personnel employed by the city of Los Angeles at the close of the campaign, exclusive of state inspectors, was as follows: 1 field superintendent, 1 chief foreman, 2 supervising foremen, 10 trapping foremen, 98 trappers, 6 squirrel hunters, 1 foreman for poison crew, 5 poison distributors, 1 foreman for disinfecting crew, 3 disinfectors, 2 foremen for policing and cleaning crew, 11 wreckers, 3 foremen for rat-proofing operations, 16 rat-proofing inspectors and 3 truck drivers.

Organization.

All of the field activities were directed from a central office; subheadquarters under the supervision of the foreman were maintained in various parts of the city. The city was laid out in districts with a trapper in each district; a number of these trappers' districts were allotted to each foreman and the subheadquarters of the various foremen were located as near the center of their allotments as was possible. The foremen in charge of subheadquarters were held responsible for the efficiency of the trappers under their supervision; also for the checking of rodents brought in by the trappers, the correctness of the trappers' reports and for the distribution and care of property. The number of traps handled efficiently by the individual trappers ranged from 300 to 500, depending on the character of the terrain covered.

In placing the traps, the trappers were required to note in their memorandum books the address, character of premises and number of traps placed therein. This information was left with the foreman at the end of each day's work, so that, if a trapper failed to report for duty, the foreman was able to visit his traps. At time of removal from the traps, a tag, bearing the date trapped, location of premises in which it was trapped, and number of trapping district, was fastened securely to the right hind leg of each rodent. The trapper, after properly tagging his catch, placed it in a milk can which contained a ball of cotton saturated with chloroform to kill the fleas. The trapper kept a list showing the species and sex of all rodents trapped at each separate address. This list was turned in to the foreman and checked over by them at the end of each day. After checking the rodents the foremen placed them in shipping cans to be taken to the laboratory for examination. These cans also contained balls of cotton saturated with chloroform, in order to make sure that all fleas were destroyed.

Hunting Operations.

The squirrel hunting crew consisted of one acting foreman and five hunters. All squirrels were collected and brought to the laboratory for examination. The hunters were required to make a daily report to the foremen, showing the territory hunted over, the number of squirrels shot, the number of shells expended and the number of shells on hand at the end of the day. The foremen compiled these data daily and submitted them to headquarters. During the campaign more than 33,600 ground squirrels were shot for laboratory examination.

Poisoning Operations.

This branch of the work was carried on by two foremen and ten men. Phosphorous paste was used upon all premises except warehouses and docks where some arsenic and barium carbonate were used. Men engaged in placing poison were required to make note of the address of premises in which poison was placed and also the number of poison baits placed therein. These notes were turned in to the foremen at the end of each day. During the campaign more than 7,000,000 poison baits were placed and many thousands of poisoned rats were found. In two locations, the San Pedro hog ranch and the Los Angeles city dump, more than 5300 poisoned rats were found. In all districts which were thoroughly poisoned a substantial decrease in the rat catch was noted.

Policing and Cleaning Operations.

This work consisted of wrecking buildings; removing skirtings of buildings; wooden floors in outhouses, yards and passageways; also the removal of rubbish, etc. Two foremen and a daily average of about fifteen men were employed in this type of work. During the campaign more than 2380 old and dilapidated buildings were policed and cleaned, and more than 8000 loads of rubbish were hauled to the dumps and destroyed. The area cleaned covered approximately 6,647,300 square feet.

Disinfecting Operations.

The disinfecting crew consisted of one foreman and three men. All premises in which human or rodent cases of plague were found were disinfected with a petroleum emulsion and chloride of lime. All premises in the district which had been a plague-infected focus were also disinfected. The interiors of all buildings in which cases were found were sprayed with the emulsion and the areas under and around all buildings in the infected area were well soaked and then sprinkled with chloride of lime.

During the campaign more than 3900 buildings, 4580 basements and 3650 yards were disinfected. More than 50,160 gallons of the petroleum emulsion and more than 36,300 pounds of chloride of lime were used.

Rat-Proofing Operations.

The crew engaged in this work consisted of the foreman and an average of about ten inspectors.

Temporary rat-proofing. The rat-proofing of small buildings was accomplished by elevating the first floor at least 18 inches above the

ground and leaving the space below the floor open on three sides and free from rubbish.

Remodeling of larger nonrat-proof structures. Buildings of this type are usually of frame construction, built with a very small, if any, foundation wall, and seldom if ever with a foundation wall extending below the surface of the ground. In rat-proofing this type of building it was necessary to install an area wall of brick or concrete around the entire building. Such walls were required to be not less than six inches in thickness and to extend not less than eighteen inches below the surface of the surrounding soil and not less than one foot above the surface of the ground. In buildings where the floors were less than twelve inches above the ground the brick or concrete area wall was extended upward between the floor joists to the under surface of the floors. In cases where buildings of this construction were used as food supply places the wooden floors were removed, the spaces filled to within about three inches of the floor level, then a concrete floor installed. In cases where buildings were resting on brick or concrete foundation walls, which did not extend below the surface of the surrounding soil, the owners were required to install an area wall of brick or concrete not less than six inches in thickness and extending eighteen inches below the surface of the ground around the building on the outside of the present foundation wall and connecting with the same. In addition to the area walls it was necessary to close with cement or wire screen, having a mesh of not more than one-quarter inch, all openings in foundation walls, ventilators, openings around pipes, etc.

Rat-proofing new buildings. New buildings, if of frame construction, were required to have foundation walls of brick, concrete or other material impervious to water. These foundation walls were required to be constructed without break around the entire building and to be not less than six inches in thickness and to extend at least eighteen inches below the surface of the surrounding soil and at least one foot above the ground level. All openings in the foundation walls were closed with cement or with screen having a mesh of not more than one-quarter of an inch.

In all buildings used as food supply establishments concrete floors were required, except in cases where basements were provided and in such cases it was necessary to have concrete floors, brick or concrete walls, also to have all openings, ventilators, openings around pipes, etc., properly closed either with cement or wire screen, having a mesh not greater than one-quarter of an inch. Where ceilings were found in basements it was necessary to either remove the ceiling or place the same in rat-proof condition. Where stores above ceiled basements were used as food supply establishments it was necessary to cover the wooden floor with material impervious to rats. In some cases wire screen, having a mesh of not more than one-quarter inch and laid between two wooden floors, was used; in other cases, the wooden floors were covered with tile or other material impervious to rats.

In covering the floors in such places it was necessary to extend the covering under stairways, show windows, etc., and to either extend the covering up on all walls at least eight inches or to remove the baseboards and extend the covering over or under the wall bases to the next

wall, thus closing the space between the walls leading from the space along the ceiling in the basement.

In rat-proofing buildings of all types care was taken to see that all openings existing on the roofs, ventilators, air ducts, unused chimney places, etc., were properly screened and that wires leading down light wells were properly protected by means of galvanized iron flashings to prevent rats from going along these wires and gaining entrance into buildings through open windows, etc.

SUMMARY OF OPERATIONS OF RODENT EXTERMINATION DEPARTMENT.

November 4, 1924, to May 31, 1925.

Los Angeles

Rats exterminated	130,064
Plague-infected rats found, last date May 21, 1925	111
Mice exterminated	24,327
Squirrels exterminated	27,438
Plague infected squirrels found, last date March 23, 1925	7
Poison bait placed	4,893,109
Buildings and premises disinfected	8,238
Premises policed and cleaned, rubbish removed	1,504
Buildings demolished	2,208
Appraised value, \$662,400	
Buildings rat-proofed: By elevation	2,751
By concrete	3,617
Approximate expenditures by property owners	\$1,353,308

San Pedro

Rats exterminated	9,801
Plague-infected rats found, last date December 29, 1924	6
Mice exterminated	1,753
Squirrels exterminated	6,245
Poison bait placed	2,194,600
Buildings and premises disinfected	138
Premises policed and cleaned up, rubbish removed	911
Buildings demolished	174
Appraised value, \$17,400	
Buildings rat-proofed: By elevation	887
By concrete	237
Approximate expenditures by property owners	\$160,820

In addition to other field operations, inspectors from the adjacent cities were given instructions and practical demonstrations of rat-extirpation operations, as these cities desired to undertake rodent control measures.

SUMMARY COOPERATIVE RODENT EXTERMINATION TRANSACTIONS.

March 26, 1925, to July 3, 1926, Vernon, California.

Rats exterminated	2,167
Plague-infected rats found	27
Last case, plague-infected rat found, April 30, 1925	
Mice exterminated	3,111
Squirrels exterminated	116
Poison bait placed	234,000
Buildings wrecked and removed	523
Appraised value of buildings demolished, \$7,700	
Buildings rat-proofed: By elevation	115
By concrete	106
Approximate expenditure by owners	\$40,310

Other Rodent Plague Surveys.

Pursuant to instructions from the secretary of the California State Board of Health the chief inspector visited Monterey, San Louis Obispo, Santa Barbara, Ventura, Orange, Riverside, San Diego and Imperial counties for the purpose of interviewing health officers, horticultural commissioners and other officials with reference to making a plague survey of rodents in both county and city territory. The officials interviewed were, without exception, in favor of such a survey and promised their cooperation. Arrangements were made with the horticultural commissioners to collect the rodents for examination, some of the rodents to be examined in the state laboratory in Berkeley and others in local laboratories. This survey is still in operation.

On October 15, 1925, one of the assistant inspectors of the division of sanitation was detailed to cooperative work with the officials of Monterey city in rodent control work. Traps were placed throughout the city, special attention being given to the business section and water front.

SUMMARY OF OPERATIONS.**Monterey City—**

Inspections and reinspections.....	1,201
Improvements made, premises cleaned, etc.....	402
Rats trapped	178
Mice trapped	156
Rats found dead (poisoned).....	300
Poison bait placed (rats).....	33,000
Poison bait placed (squirrels).....lbs.	75
Squirrels found dead (poisoned).....	31
Approximate expenditures	\$261.30

Pacific Grove—

The city furnished the services of one of the regular paid firemen to assist in placing poison bait for the destruction of rats. More than 10,000 poison baits were placed throughout the city and on the garbage dump. A number of dead rats were found as a result of the poisoning and these were sent to the county laboratory for examination.

Salinas—

About 50,000 poison baits were placed on the city garbage dump for the destruction of rats. As a result of the poisoning, more than 190 rats were found and taken to the county laboratory for examination. In addition, 43 rats were trapped on the dump. Approximate expenditure, \$101. The poison was placed by the county health officials. A few days after the poison was placed the dump was set on fire and thoroughly burned over.

Pajaro—

Rats trapped, 25. These were examined in the county laboratory.

Monterey County—

The county, under the supervision of the horticultural commissioner, spent \$8,400 in rodent control work from July 1, 1924, to December 1, 1925.

San Luis Obispo County—

In the month of July, 1924, a violent outbreak of plague occurred in the ground squirrels in San Luis Obispo County. The chief inspector was detailed to assist and cooperate with the county officials and the officials of San Luis Obispo city in checking the spread of the disease. A careful investigation was made of the squirrel situation in and around the city of San Luis Obispo. In the territory inspected, both within the city and in the county territory covering an area of approximately five miles surrounding the city, numerous squirrels were noted.

The matter of squirrel control was taken up with the horticultural commissioner and the county health officer. The horticultural commissioner advised that he had four men working in the known infected area, placing poison for the destruction of ground squirrels.

July 7, 1924, in company with the county health officer and the horticultural commissioner, the chief inspector attended a meeting of the board of supervisors. Acting upon our recommendations, the board of supervisors authorized the employment of five men to place poison and also the traveling expenses of a state or federal inspector to supervise the work.

On the same date the city officials of San Luis Obispo were visited and the situation explained to them. The mayor authorized the employment of one foreman and five men to trap and poison rats and to place poison within the city limits for the destruction of ground squirrels. Authorization was also given for the purchase of whatever materials might be needed. This work was started at once, a number of traps were purchased and placed throughout the city and on the city garbage dump. Men were also sent out to place poison for the destruction of ground squirrels within the city limits. The foreman, in addition to supervising the rodent control operations, was required to make inspection of premises to enforce general sanitation. Most of the rats trapped and many of the squirrels found dead as a result of poisoning were sent to the federal laboratory in San Francisco for examination. A few were examined in the county laboratory. Of these, one squirrel was found to be plague-infected.

At the time the control work was being carried on in the city, the county forces were working to clean up a five-mile area around the city.

An investigation of the city garbage dump showed that practically all of the rats had died. As no poison had been placed anywhere in the vicinity of the dump it was thought that this condition was the result of plague infection. The various inspectors of this dump found more than 250 dead rats. Owing to hot weather the carcasses were unfit for examination.

Summary of Operations, July 1 to 16, 1924.

Squirrel extermination:

Ranches inspected	21
Approximate number of acres poisoned	25,000
Approximate per cent of squirrels exterminated at first poisoning	80
Average number of men employed daily	9
Squirrels shot and found poisoned	62
Squirrels collected by federal inspectors	25

Rat extermination:

Inspections made	416
Traps in operation	288
Rats trapped	197
Mice trapped	140
Poison bait placed	27,600
Rats found dead on dump	256
Average number of men employed daily	4

On July 16, 1924, the supervision of this activity was turned over to a representative of the United States Public Health Service.

On November 12, 1925, the chief inspector again visited San Luis Obispo county for the purpose of soliciting the cooperation of the county and city officials in making a plague survey among rodents. At that time, the county was without a horticultural commissioner, so the matter was taken up with the county health officer and the chairman of the board of supervisors, who promised their cooperation. About December 1, 1925, a horticultural commissioner was appointed and shortly thereafter measures were instituted to again clean up a five-mile area around San Luis Obispo and the territory adjacent to the harbor. Intensive squirrel control operations were also started throughout the county.

The city officials were visited and the matter explained to them. The mayor authorized the employment of a trapper to work within the city limits. In order to facilitate all of the work a representative from the division of sanitation was detailed to cooperate and assist.

About November 20, 1925, a plague-infected rat was found on the highway near Ontario Hot Springs. The examination of this rodent was made in the county laboratory and the findings were confirmed in the state laboratory at Berkeley.

Immediately after finding this infected rodent, intensive control measures were instituted in the vicinity of Ontario Hot Springs.

Summary of Operations, November 17, 1925, to January 28, 1926.

Rats trapped-----	301
Mice trapped -----	219
Squirrels shot -----	21
Poison bait set (rats)-----	30,000
Mass inoculation prepared-----	13
Rats proven positive for plague, county territory-----	1
Rodents examined, laboratory-----	174
Rodents showing suspicious symptoms-----	52

Approximate expenditures, July 1, 1924, to December 1, 1925:

County of San Luis Obispo-----	\$22,395.89
City of San Luis Obispo-----	\$1,750.00

Ventura County and Others—

Ventura County was visited on November 16, 1925; Santa Barbara County on November 17, Riverside County on November 24, Orange County on November 24, San Luis Obispo County in January, 1926. The matter of making a plague survey of rodents was taken up with the various health officers, horticultural commissioners and others, all of whom expressed a desire to cooperate. While a large amount of rodent control work was done and is still being carried on in these counties, very few rodents are being sent in for examination. This is probably due to the fact that it takes time to work over a poisoned area to collect the dead rodents and practically all of the men engaged in this work have numerous other duties to perform and which require a large amount of their time.

In December, 1925, a rat campaign was carried on in the city of San Diego under the direct supervision of the health officer. About \$2,500 was spent by the city in this work and more than 6,500 rats were trapped. These rats were not examined.

Arrangements were made with the health officer of Orange County to collect rats from various towns in the county and during the last few months of 1925 rat trapping was carried on in Santa Ana and other towns. It is estimated that about \$3,000 was spent in this work.

In June, 1926, the chief sanitary inspector investigated an outbreak of plague in ground squirrels in San Benito county. It was learned that during the previous month people living in the Bitterwater district notified the health officer and horticultural commissioner that squirrels were dying in large numbers in that district. Twenty-seven squirrels were shot and shipped to the federal laboratory in San Francisco. Two of the twenty-seven proved to be plague-infected. A careful survey of the squirrel situation in the Bitterwater district and adjacent territory was made, in company with the county horticultural commissioner. Ground squirrel infestation of the territory from Hollister to a point about five miles south of that city was considered fairly light, but from that point south through the Bitterwater district it was heavy, especially on the Tully ranch and adjoining lands where squirrels were exceptionally numerous. This condition also existed through the lower part of the district and into Monterey County through Priest Valley district to the southern boundary of that county.

In order to control the situation in the southern part of San Benito County, the matter was taken up with the chairman of the board of supervisors, who authorized the employment of five men and the purchase of materials to carry on a rodent control campaign in the southern part of the county. This work is now under way. Later, the work will be extended to take in other parts of the county where ground squirrels are numerous.

In order to obtain an index as to the prevalence of plague in ground squirrels of Monterey County, a conference was held in the southern part of the county with the county health officer, county horticultural commissioner and the county rodent control inspector. Arrangements were made at this conference for hunting squirrels in the territory adjacent to the southern boundary line of San Benito County. A representative from the Division of Sanitation of the California State Board of Health, the assistant horticultural commissioner, the rodent control inspector, and the county sanitary inspector spent over a week shooting and poisoning squirrels in the above named territory. More than 450 ground squirrels were collected and examined in the county laboratory. This work will be continued until a satisfactory

index has been obtained, after which an intensive eradication campaign will be undertaken.

Arrangements are now under way for carrying on similar work in certain sections of Santa Cruz and Fresno counties.

CAMP SANITATION.

Cooperation with State Forestry Board.

At a meeting of the State Forestry Board the supervision of sanitary conditions in the state-owned parks was delegated to the California State Board of Health. The Forestry Board placed the inspection of these parks under the direction of the Division of Sanitation of the California State Board of Health. Several of the parks were inspected in the past year and suggestions made in regard to sanitary improvements. Many of the recommended improvements have been made.

A fully equipped automobile camp with permanent housekeeping cottages.

Cooperation with United States Forest Service.

Upon request of the United States forest service through the district forester for assistance in improving sanitary conditions in the national forests located in the southern part of the state, a representative of the division of sanitation was detailed to assist and cooperate with the forest supervisors in this important work. To date, cooperative sanitary surveys have been made of San Bernardino, Cleveland and Angeles national forests. Sanitary surveys are now under way in Inyo and Mono national forests.

The survey covers the inspection of all auto camps, designated camping spots, summer resorts and privately-owned homes located within the forest reserve. The forest reserves are being laid out in districts to be used for recreational purposes and for summer homes. The districts are carefully inspected and the type of toilet or method of sewage disposal to be used in each individual district are determined. Methods for the disposal of garbage and other waste matter are also outlined for

each district. This is done because many of the districts are located on watersheds from which domestic water supplies are obtainable, also in order to prevent, in so far as possible, the pollution of all streams within the forest reserves.

Automobile Camp Grounds and Summer Resorts.

During the past two years several hundred new automobile camp grounds have been opened and others are being constructed. These camps are heavily patronized throughout the entire camping season and in many sections of the state they are patronized throughout the year, not only by people living in California, but by thousands of people living in other states. In order to protect the health of the traveler it is essential that a high standard of sanitation be maintained in auto-

Permanent housekeeping cottages with out-of-door fireplace in modern automobile camp.

mobile camp grounds. The old-fashioned auto camp of a few years ago, where the traveler pitched his tent or slept on the ground in the open and where few sanitary facilities were provided, is fast disappearing and in its place are camps which are provided with well-constructed cottages, containing beds, separate kitchens, sinks, running water, electric lights, also water-flushed plumbing facilities, showers with hot and cold water, laundry facilities, reading rooms and many other conveniences. In the past two years 1287 automobile camp grounds were inspected and over 1395 reinspections were made of these places. The camp owners as a whole have endeavored to cooperate with the inspectors in improving sanitary conditions in their camp grounds. An enormous number of improvements have been made and it is estimated that approximately \$853,000 have been expended in the past two years in the improvement of these automobile camp grounds throughout the state.

In order to insure uniform construction and maintenance of buildings in automobile camp grounds, the California State Board of Health in February, 1923, amended the regulations governing camp ground sanitation so as to include the construction of buildings, etc.

In addition to the regular automobile camp grounds there are thousands of camping places, located in the mountains and along streams and highways throughout the state. It is almost impossible to keep these places in sanitary conditions, as there is no one who can be held responsible, unless it is the owner of the land, who in most cases is ignorant of the fact that there is any camping on his property. In a number of cases, where the owners were notified by the inspectors of conditions created by people camping on their property, the owners have had their premises fenced and in one case, where a water supply was involved, it cost the owners over \$3,000 for fencing.

During the past two years over 2732 of these camping places were

Modern permanent automobile camp which provides complete hotel and garage service.

inspected and many hundreds of notices were posted, warning campers to clean up these camps and bury all refuse before leaving. On reinspection many of these camping places were found to be in a clean condition. In addition to the automobile camp grounds inspected, over 260 summer resorts were visited. In practically all of the summer resorts visited sanitary conditions were found to be satisfactory and a high standard of sanitation was being maintained. The high standard of sanitation in these places is due largely to the work of the sanitary inspectors of the California State Board of Health and to the cooperation of the owners of such places.

Miscellaneous Transactions.

At the 1925 session of the legislature funds were made available for the employment of one additional sanitary inspector and in September, 1925, the California State Board of Health appointed Mr. George S. Morgan as inspector in the division. Mr. Morgan was detailed to the

southern part of the state with headquarters at Los Angeles, relieving Inspector Frank G. Veatch, who was detailed to the northern part of the state with headquarters at Santa Rosa. The appointment of the additional inspector made it possible to extend the work of this division into a number of counties in the northern part of the state.

A number of preliminary sanitary surveys were made of cities in various parts of the state. These surveys covered the inspection of food supply establishments and, in a number of cases, water supplies, sewage and garbage disposal. Assistance was given to officials in a number of communities in instituting measures for the control of rabies. Assistance was also given the division of epidemiology in the control of typhoid fever in several localities.

Several hundred complaints relative to insanitary conditions were investigated and many thousands of miscellaneous premises were inspected. In addition, a large number of special investigations relative to health conditions in various parts of the state were made.

SUMMARY.

Automobile camps—

	1925	1926	Total
Inspected	222	1,065	1,287
Reinspected	535	860	1,395

REPORT OF DIVISION OF MALARIA CONTROL.**July 1, 1924, to June 30, 1926.**

LOUVA G. LENERT, Sanitary Engineer, January 1, 1923, to September 26, 1926.

EDWARD STUART, Sanitary Engineer, January 14, 1926, to date.

The work of this division has to do with the control of mosquitoes and malaria. It consists, primarily, of making anti-malaria and mosquito surveys in those sections of the state where the necessity of such work is indicated. It also has to do with advisory service directed toward the various mosquito abatement districts within the state. In most instances this requires work of supervision. The division also distributes *Gambusia affinis* (top minnows) from the state hatchery. Many requests for these little fish, that have proved so efficient in the destruction of mosquito larvae, are constantly received and they are shipped to all parts of the state.

This division was created in 1922, before which time there had never been any continuous work upon the part of the State Board of Health directed toward the control of mosquitoes and malaria. During the summer seasons of preceding years, preliminary surveys had been carried on in various parts of the state. Appreciations for continuous extensive work became available in 1922. The division has been functioning continuously since that time. Mention must be made, however, of the work done at Anderson in Shasta County in 1918, when a special appropriation of \$10,000 was used in making a mosquito survey, drainage, ditching and oiling, and also in the maintenance of a clinic where cases of malaria were placed under treatment.

The following summary gives, in condensed form, an outline of the activities of the division during the past two years:

SISKIYOU COUNTY.

Etna Mills. *Gambusia affinis* were planted in streams here.

MODOC COUNTY.

Lakeview, Ore. *Gambusia affinis* were planted in Goose Lake, where they were reported to be well established at the end of the 1924 season. More fish were shipped in 1925.

LASSEN COUNTY.

Pittville. *Gambusia affinis* were established in this community.

SHASTA COUNTY.

Fall River Mills. *Gambusia affinis* planted in Fall River in 1924 are well established and are beneficial in this community.

McArthur. A preliminary survey of this district was made which showed that improvement in drainage and irrigation methods would do much to improve the local mosquito situation. The valleys here are narrow and mosquito breeding places are all man-made.

Redding. The mosquito abatement district here is active in advancing mosquito and malaria control. The chief problem in this district lies in the irrigation canals. Much good work has been accomplished but there remains considerable drainage work to be done to eliminate the series of sloughs in some sections of the district. *Gambusia affinis* have been planted liberally in this territory.

Clear Creek. The mosquito abatement district in this territory lies in the vicinity of Redding. Part of the district includes the dredger tailings left by a

dredger concern. Dredger ponds are probably responsible for considerable malaria here.

Latona. This entire district was planted with *Gambusia affinis*, in fact the original hatchery outside of Sacramento was in a brick yard pit at this place. More than 60,000 fish were taken from this hatchery in one day.

Anderson. The mosquito abatement district here is the most widely had district of this sort in the state; however, there are still many problems in mosquito control to be encountered here. Seepage through carelessness in handling irrigation and through unpreventable causes are the greatest difficulties encountered. *Gambusia affinis* have been planted throughout this district.

Cottonwood. *Gambusia affinis* have been planted throughout this district, also.

Happy Valley. *Gambusia affinis* were distributed widely in the vicinity of Happy Valley, Igo, Ono and Olinda.

TEHAMA COUNTY.

Los Molinos. A large amount of cooperative work in mosquito control has been accomplished in the vicinity of Los Molinos. All of this district has been stocked with *Gambusia affinis*.

Corning. *Gambusia affinis* have been planted in creeks near this locality.

Vina. This territory has also been widely planted with *Gambusia affinis*.

BUTTE COUNTY.

Durham. There is an active mosquito abatement district at Durham. *Gambusia affinis* have been planted here.

Oroville. One of the oldest mosquito abatement districts in the state is located here. *Gambusia affinis* have played a prominent part in eliminating malaria in Oroville and vicinity. They have been thoroughly distributed throughout the district.

Biggs. *Gambusia affinis* have been distributed here as well as at Gridley.

YUBA COUNTY.

Marysville. This district has been thoroughly planted with *Gambusia affinis* as well as Browns Valley, Smartsville, Deer Creek, Ostrona and along the road connecting Grass Valley with Marysville.

PLACER COUNTY.

Lincoln. *Gambusia affinis* have been widely distributed on the highway between Lincoln and Wheatland and between Lincoln and Roseville.

SUTTER COUNTY.

Gambusia affinis have been planted in many parts of Sutter County, notably Garden Highway, Nicolaus, Rio Oso and Meridian.

EL DORADO COUNTY.

Diamond Springs. Considerable has been accomplished here in the way of mosquito control by means of planting *Gambusia affinis*.

SACRAMENTO COUNTY.

Fairoaks. One of the early mosquito districts was established here. Under favorable wind conditions mosquitoes have blown over into this district from dredger ponds across the river. Considerable has been accomplished, however, in filling the dredger ponds, thereby remedying conditions in the district. *Gambusia affinis* have been planted at Sacramento, Freeport, Hood and Walnut Grove.

MERCED COUNTY.

Merced. One of the largest mosquito abatement districts in the state is located here. *Gambusia affinis* have been established throughout the district.

FRESNO COUNTY.

Fresno, Sanger, Maltermoro and Coalinga. *Gambusia affinis* were planted in these places.

TULARE COUNTY.

Visalia. An active mosquito abatement district is functioning here where real results are accomplished in the control of mosquitoes.

KERN COUNTY.

Bakersfield. A mosquito abatement district is working here with intricate problems connected with drainage and irrigation. *Gambusia affinis* are plentiful in this district.

GLENN COUNTY.

Willows. Planting of *Gambusia affinis* have been made in the vicinity of Willows and in the territory lying between Norman and Delaven.

COLUSA COUNTY.

Williams. A large number of *Gambusia affinis* have been distributed in this territory.

YOLO COUNTY.

Woodland, Davis and Clarksburg. Extensive plantings of *Gambusia affinis* have been made in the vicinity of these places.

SOLANO COUNTY.

Dixon. *Gambusia affinis* were planted in the creeks between Dixon and Vacaville.

NAPA COUNTY.

The entire county of Napa was formed in a mosquito abatement district in 1925. Its first year's work will be completed in 1926. This district has acute problems in mosquito control.

SONOMA COUNTY.

South Sonoma M. A. D. This district was organized principally for the protection of the resort district lying between Sonoma, Boyes Springs and Agua Caliente. No work in the control of salt marsh mosquitoes has been undertaken.

Petaluma. Extensive plantings of *Gambusia affinis* have been made in the vicinity of Petaluma.

MARIN COUNTY.

Marin County M. A. D. Practically all of this county is organized in a district and all of the activities undertaken here have to do with the control of salt marsh mosquitoes.

San Rafael. *Gambusia affinis* have been extensively distributed in the vicinity of San Rafael.

Belvedere. *Gambusia affinis* have been established in this locality.

SAN FRANCISCO COUNTY.

Steinhart Aquarium. The superintendent and assistant superintendent of this aquarium are active supporters in the use of *Gambusia affinis* for mosquito control. The aquarium is supplied with a large number of fish which they distribute in small numbers to anyone desiring them.

CONTRA COSTA COUNTY.

Efforts have been directed toward the establishment of a mosquito abatement district which would include the northern end of the county from Martinez to Antioch including Concord.

ALAMEDA COUNTY.

A large amount of work has been accomplished toward the establishment of a mosquito abatement district in this county. Such a district has not been established as yet but it is believed that its formation will come later.

SANTA CLARA COUNTY.

Palo Alto. The Matadero Mosquito Abatement District covers the northern part of Santa Clara County. There is a movement on foot to enlarge this district so that it will embrace all of the territory at the southern end of San Francisco Bay.

SAN MATEO COUNTY.

San Mateo, Hillsboro, Burlingame. The Three Cities Mosquito Abatement District operates here. This was the first district to be formed in the state. Practically all of its work is in the control of salt marsh mosquitoes. *Gambusia affinis* have been widely distributed here.

Redwood City. The Pulgas Mosquito Abatement District operates here. This is another salt marsh district lying between the Three Cities District and the county line on the south. *Gambusia affinis* have been distributed throughout this district.

LOS ANGELES COUNTY.

Long Beach. This city maintains a mosquito abatement division in the local health department. Unfortunately, the department is not able to carry on any work outside of the city, particularly in the section near the Orange County line where salt marsh mosquitoes are exceptionally prevalent.

Gambusia affinis have been distributed in South Pasadena, Inglewood, Beverly Hills, Hollywood, Glendora and in the City of Los Angeles.

ORANGE COUNTY.

A survey of the entire county was made and *Gambusia affinis* were widely distributed throughout the county.

RIVERSIDE COUNTY.

Riverside. *Gambusia affinis* were planted in Riverside city and also in Blythe and vicinity.

REPORT OF THE HYGIENIC LABORATORY.**July 1, 1924, to June 30, 1926.**

WILFRED H. KELLOGG, M.D., Director.

When comparing the record of laboratory examinations for the present biennium with that of the preceding it is noted that there was a steady though moderate increase in all diagnostic examinations except diphtheria. The tabulation of general laboratory work is arrayed in tables covering six-month periods and the parasitological examinations are tabulated separately. (See report of the Division of Parasitology.) The total, however, excluding parasitology, is 11,000 less than for the preceding biennium, due to the falling off in diphtheria examinations which were 15,700 less.

The growth of the other work of the laboratory would certainly have been much greater than it was had it not been for the establishment of several new whole time health departments with their laboratories and the expansion of laboratory service in certain existing departments. Notable in the field of expansion is the Los Angeles County health department, which has organized a central laboratory and five branches.

The movement of decentralization, attendant upon the improvement of local laboratory service, has been encouraged by us, and a policy of aid and cooperation adopted which is believed to be one of the chief functions of a state laboratory.

The question naturally arises as to why the miscellaneous examinations should show any increase at all, considering the great reduction in diphtheria examinations. The answer is that the diphtheria reduction is not due solely to the greater activity of local laboratories; the most important factor is a state-wide recession of diphtheria morbidity. The number of cases of diphtheria reported in the state for 1924 was 11,110 giving a morbidity rate of 285. For 1924, the cases were 5575 and the rate 139. The fall is almost in exact proportion to the reduced number of examinations in the laboratory.

Policy in Regard to Local Work.

The Hygienic Laboratory does bacteriological and serological work for the control of communicable disease for all county and city health officers, state institutions, county hospitals, health centers, both official and unofficial, schools public and private, and all regularly licensed physicians. It does not, however, accept specimens from physicians in communities having an approved public laboratory. It is our policy to encourage the maintenance of qualified local laboratories and to this end, the Hygienic Laboratories encourages correspondence regarding local problems and furnishes, free of charge, certain reagents such as antigen for the Wassermann test and agglutinating antigen for typhoid and paratyphoid diagnosis. It is expected that later it will be possible to add immune sera for identification of species and amboceptor for complement fixation tests.

A bulletin is issued to certified laboratories and others desiring it, which serves the purpose of passing on to others in the same work, the results of research and improvements in technic. The scope of the

Certification of Laboratories.

Increasing attention is being given in different states to the need for some sort of supervision of clinical laboratories. This bureau was authorized by the State Board of Health in 1923 to inaugurate a plan of voluntary certification and the result has been very gratifying. There are at the present time 60 laboratories that have been approved and given certificates to that effect.

The need for protection of the people and their physicians and health departments against a low standard of service in this important field is evident to every competent laboratorian and to every physician who is himself sufficiently in touch with laboratory methods to recognize ignorance and charlatanism when it appears in the guise of diagnostic laboratory service.

In line with this conception of their duty as guardians of the public health, the State Board of Health initiated in 1923 the existing plan of laboratory certification, in this respect having been preceded only by the state of New York.

In the operation of this division of the work, an application for certification is followed by a personal visit to the laboratory by the director of the bureau. The applications are made in writing on a special form provided by the department. In this application questions are answered regarding educational qualifications and experience of the director, the number of employees, the physical equipment of the laboratory, types of work performed, etc. The applicant also agrees to keep careful records of work done, including the preservation of certain stained slides for a definite period and to submit to inspection as required. It has not been considered necessary or advisable to require particular methods of examination, but if the method in use is not considered a safe or effective one, approval of that particular examination is withheld, unless an approved method is adopted.

Under the regulations of the board, the director of a laboratory, if not the owner, must have full authority to control the policy of the laboratory, in so far as technical matters are concerned. The records that are required to be kept are those pertaining to the examination of specimens, such as results, patient and sender. Financial matters, fees for examinations, etc., are not inquired into. Changes affecting the directorship, removal of laboratory to new location, radical changes in technic and discontinuance of tests previously approved, must be reported to the director of the Hygienic Laboratory. Certificates are issued to the responsible head of particular laboratories and do not apply to other laboratories even when under the same management, or to the same laboratory under different management.

The laboratories at present on the approved list are the following:

Alameda City Laboratory.
Alameda County Health Center.
Alameda County Hospital.
Clinical Laboratory of Ruth M. Lane, Bakersfield.
Kern General Hospital Laboratory, Bakersfield.
Berkeley Municipal Laboratory.
Physicians Diagnostic Laboratories, Berkeley.
San Joaquin General Hospital Laboratory.
Laboratory of Dr. John Chain, Eureka.
Humboldt County Hospital Laboratory.
Glendale City Laboratory.
Dr. Ernest H. Ruediger, Hollywood.
Long Beach Health Department Laboratory.
Drs. Brem, Zeiler and Hammack, Los Angeles.
Dr. Mona E. Bettin, Los Angeles.
Los Angeles City Health Department.
Los Angeles County Health Department, Main Laboratory.
Los Angeles County Health Department, Whittier Branch.
Los Angeles County Health Department, Pomona Branch.
Los Angeles County Health Department, Alhambra Branch.
Los Angeles County Health Department, Monrovia Branch.
Los Angeles County Health Department, Redondo Beach Branch.
Angelus Hospital, Los Angeles.
Moore-White Clinic, Los Angeles.
Dr. H. E. Butka, Los Angeles.
White Memorial Hospital, Los Angeles.
Drs. Frey and McKnight, Los Angeles.
Clara Barton Hospital, Los Angeles.
Pasadena Health Department Laboratory.
Dr. Gustav Ruediger, Pasadena.
Palo Alto Clinical and Pathological Laboratory.
Western Laboratories, Oakland.
The Oakland Laboratory, Oakland.
Oakland Health Department Laboratory.
Orange County Health Department Laboratory.
Richmond City Laboratory.
Dr. C. D. Holliger, Stockton.
Dr. Bessie Stokes Martell, Santa Ana.
Santa Barbara City Health Department Laboratory.
Santa Barbara Cottage Hospital Laboratory.
Sacramento City Laboratory.
Dr. J. R. Snyder, Sacramento.
Sutter Hospital Laboratory, Sacramento.
San Joaquin Local Health District Laboratory.
San Luis Obispo Health Department Laboratory.
Monterey County Laboratory.
Dr. Rawson J. Pickard, San Diego.
Dr. H. A. Thompson, San Diego.
Salinas Clinical Laboratory.
Drs. Oliver and Knapp, San Francisco.
Children's Hospital, San Francisco.
Lane and Stanford Hospital Laboratory, San Francisco.
Dr. Marian H. Lippman, San Francisco.
San Francisco Health Department.
Dr. Ernst A. Victors, San Francisco.
The O'Reilly-Wheeler Laboratory, San Francisco.
The Frank Kolos Laboratories, San Francisco.
The Edward I. Sugarman Laboratory, San Francisco.
Brown and Brown Clinical Laboratories, Visalia.
Woodland Clinic Laboratory, Woodland.

REPORT OF THE BUREAU OF TUBERCULOSIS.**July 1, 1924, to June 30, 1926.**

EDYTHE TATE THOMPSON, Director.

In 1911 the California legislature appointed a Commission on Tuberculosis to report its findings and recommendations to the 1913 legislature. The report covered the social and economic aspects of tuberculosis, as it was found at the time.

In a little over a decade California seems to have turned from one of the blackest pages in her social history to an era where social and industrial justice has very consciously contributed a large share towards the control of tuberculosis in this state. The director has publicly stated many times our appreciation of this help on the contributory causes of tuberculosis, and we are correspondingly grateful to the other state departments who year after year have, through the efforts of their departments, made California a safer and happier place in which to live.

Previous to 1914, the highest death rate in the state was among casual laborers. The director for the past ten years has made frequent reference to the social and physical condition of these men, but the enactment of the housing and immigration law, marked a step in the betterment of the conditions of these men on whom many groups in the state are dependent. The housing situation, as mentioned in the commission's report, has improved particularly in the camps and on the ranches, where these men work. The lodging-house situation in the larger cities needs immediate attention. San Francisco, Los Angeles and Oakland are still without provision to house properly the many homeless men who migrate through these cities on their way to the lumber camps in the north or the fruit and cotton-picking in the south. These places are a menace to public health and during the coming year it is to be hoped that some effort will be made by the boards of health and local tuberculosis associations to change the present condition. The condemnation of the one and two room shacks, particularly in Los Angeles, where many tuberculous Mexicans live, also needs consideration.

We are indebted to the Industrial Welfare Commission for the continued protection given to women in industry. The eight hour law and the minimum wage has raised the standard of living and helped hundreds of young people in this state. The greatly improved conditions under which they work has undoubtedly contributed a great deal to our campaign. Housewives still lead the highest number of women in our hospitals and clinics. The tabulated report of occupations is a fair index of where tuberculosis is claiming its greatest numbers. An analysis of the deaths, or attendance at the clinics, or admissions into the hospitals shows how much the Industrial Welfare Commission has been able to do in former years towards raising the standard of living and conditions under which women, who are gainfully employed, work in this state. No single industry now can be charged with contributing to tuberculosis; we are grateful beyond words that our California industries can no longer be charged as contributory causes to tuberculosis.

The Department of Children's Aid is another state agency that has assisted our program with their payment of state aid to children whose

fathers are in sanatoria. There were 600 children last year who received this aid. The State Dairy Bureau is another department which, through its activities, has provided excellent weapons in the fight against tuberculosis.

The state and local tuberculosis associations continue to render invaluable aid in carrying on programs that are of great assistance to the state and local boards of health. The establishment of bureaus of tuberculosis in city and county boards of health is a splendid step towards recognizing tuberculosis officially. The San Francisco Health Department has a full time director of the Bureau of Tuberculosis as has also the Los Angeles County Health Department. Many of the cities have already provided tuberculosis nurses and have taken over the operation of the clinics.

Necessity for Local Ordinances.

The necessity for an ordinance requiring the examination of food-handlers is a very necessary part of our program. The danger of contamination from hands of people without a clean bill of health does not rest just with tuberculosis, but until housewives and the general public make this demand, we shall probably not get very far, though we have and will continue the agitation for the ordinance. Pasadena at present is the only city in the state having such an ordinance. The state law prohibits tuberculous people from handling food, but until there is a local ordinance requiring the examination of all food handlers, the law is of little use.

Enforcement of the Present State Law.

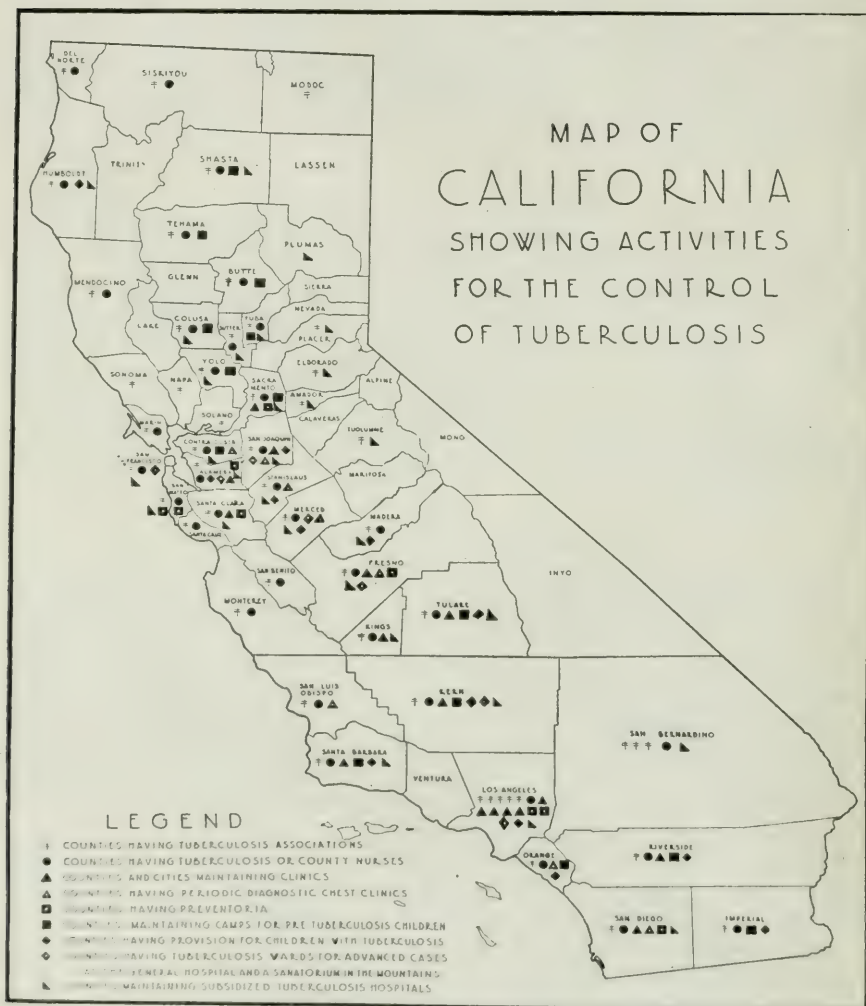

The state law requires that physicians report tuberculosis to the State Board of Health on a form printed by the Bureau of Tuberculosis. Since 1914 we have nearly doubled the number of reported cases, though we know that this figure, 9914, is not an index in any way to the real number of cases of tuberculosis. It is not to the credit of any physician in California who evades the law requiring him to report tuberculosis. Often the first report of the patient is the death certificate bearing the patient's name. We know that tuberculosis is decreasing in California, as far as the deaths are concerned because of the great number of patients now under treatment.

The anti-spitting law is enforced only as individuals are decent enough to avoid expectoration on sidewalks and stairways. The bureau continues to distribute large numbers of placards, urging people to "Keep California Clean."

The subsidy law continues its successful operation and with the exception of only one county in the state, the bureau has received splendid cooperation from the supervisors. Nearly all of the counties are as rapidly as possible providing care for the advanced cases in pavilions operated in conjunction with the general hospital, so that the sanatorium may be used for early cases. So comfortably are these buildings constructed, according to the subsidy standard, that patients no longer ask to be sent to the mountain sanatoria.

It is also worthy of comment that in all of the larger counties provision has been made for children in separate units. Open-air

schools are part of the plan in each building. Mention should be made of the medical care and treatment in the county sanatoria. All the sanatoria being operated away from the general hospitals are now in charge of full time medical directors who are tuberculosis specialists. The sanatoria are all provided with laboratories, complete X-ray equipment, sun lamps, operating room and specially built porches for heliotherapy. The wards operated in conjunction with the general hospitals,

particularly in the larger cities, have the benefit of excellent medical care. The supervisors in the counties operating sanatoria have been most generous in their desire to stress treatment, care and proper food, necessary always for results, as against expensive buildings with inadequate care.

The law giving the supervisors the authority to employ county nurses has also been of tremendous help to us.

Further Recommendations of the 1911 Tuberculosis Commission.

(1) In reviewing briefly the recommendations of the commission, we have mentioned the splendid cooperation existing between the bureau and the local health departments. The first recommendation of the commission was that there be a correlation of all the activities of individuals and organizations, both public and private, that deal directly or indirectly with tuberculosis problems. The map illustrating the machinery provided by the private and official agencies, shows how completely this has been done.

(2) "The correlation and general supervision can best be accomplished through the establishment of a State Bureau of Tuberculosis." This has now become an accomplished fact. The bureau for a number of years was adequately supported so that a great deal of the correlation was done during that time.

(3) "Complete and Prompt Registration of Cases." Comment has already been made on the fact that registration has doubled in ten years, but that reporting of cases is still far from 100 per cent.

(4) "A Tuberculosis Dispensary System Should be Established." The report on the dispensaries or clinics in the larger cities will show how greatly the dispensary service has grown. The report on the diagnostic chest clinics in the smaller communities also shows how many people have been examined during the year. The bureau's field workers, Miss Linda Mitschke, R.N., and Miss Bessie Taylor, R.N., have contributed greatly to the success of these clinics by their surveys and follow-up work and supervision of the local nurses. The California Tuberculosis Association has paid the other expenses of the diagnostic clinics. Only those counties handicapped by lack of hospital pavilions have been unable to profit by this work.

The group of home cases, hospital cases, sanatorium cases, work colony cases, and special cases recommended by the clinician are all cared for now except in the "Work Colony" Plan. Such a plan has been tried out with a small group, but recommendations for continuation at this time do not seem advisable. Children termed special cases in the report now have access to the Shriners' hospitals and other institutions taking nonpulmonary types. Open-air schools, nutrition classes, summer camps, and preventoria are now automatically part of the program.

Chest Examination of High School Students.

In cooperation with the San Francisco Tuberculosis Association the Bureau arranged for a series of chest clinics in two of the high schools in San Francisco. We were fortunate to have recognized chest specialists do the examining. Drs. Ruth Burr, Ethel Owen, Mary Mentzer, Ina Richter, and Isabel Clinton examined the girls, and Drs. Harold Trimble, Philip Pierson, Charles Ianne, and B. L. Friedlander examined the boys. The work was made possible through the help of the Physical Education Department of the San Francisco schools.

New Hospitals.

The new pavilion at the San Mateo Community Hospital was opened last year. It has already proven its need and plans are on foot for a second unit of the same type.

In the summer of 1925 a number of meetings were held with San Joaquin and Calaveras counties, with the result that plans are being drawn for a joint county sanatorium located in the mountains of Calaveras County, the sanatorium to be known as the Bret Harte Sanatorium.

The San Geronio Sanatorium of Orange, Riverside, and Imperial counties is being built. San Diego has completed an additional building for male ambulatory patients, and a children's building is in process of construction. Los Angeles County has greatly increased the buildings at Olive View. Ventura County is building a pavilion at the general hospital and is giving consideration to a sanatorium in the foothills. Santa Barbara has ordered plans for a children's unit. San Francisco has splendid provision for children on the roof of their present hospital, and Weimar has a new building.

Cooperation with Santa Barbara County.

Immediately following the earthquake, the director proceeded to Santa Barbara to assist with the plans of moving the tuberculous patients elsewhere since the patients from the general hospital had to be housed in the Antonio Sanatorium. A number of the counties signi-

Type of building. Antonio Sanatorium, Santa Barbara, California.

fied their willingness to assist. The patients were finally transferred to San Diego County.

Agitation in Counties Needing New Hospitals.

There are a number of counties in the state that are still without adequate provision for the care of tuberculous patients in their communities. A great deal of time has been spent in Sonoma County and a decision has been reached to place the matter of a tuberculosis hospital on the November ballot. Fresno County lost the vote on the hospital bond issue, undoubtedly because the location of the hospital in the foothills was not stipulated on the ballot. Monterey and Santa Cruz counties are willing to build but prefer a joint hospital located in the foothills. Santa Clara County was approached to erect a building with San Francisco but declined. They are planning additions at their present hospital.

Future Work.

A decade in retrospection seems a very short time, yet the delay in some of the counties has made the difference between restoring many people to their families as against their untimely deaths. It seems a very long time to the bureau's small staff since the machinery for the control of tuberculosis was set in motion, yet it is an accepted fact that no state in ten years has provided machinery for control as speedily as California. Aside from the saving of lives in the various communities, the actual expense has been proportionately small. It is true that the bureau had in the beginning to keep a close watch on the hospitals because of the fact that the change of method both in the construction and type of building and the care and treatment necessary to secure the subsidy, was so drastic that it practically caused a revolution in the type of hospital care provided. The counties, however, in many instances as soon as they began to see the results and see their neighbors and friends occupying beds, have far exceeded the demands made on them by the bureau. Years ago someone suggested that the law should have been made mandatory instead of an enabling act, but we are inclined to believe that the law giving permission has done a great deal more than could possibly have been done if it had been compulsory. Our greatest future need at present lies in the fact that provision must be made for increasing our turnover in the hospital. This can only be done by giving the patient a dollar a day towards his maintenance, if he returns home and is under strict supervision of a local physician and nurse. This would save the counties from having to increase their bed capacity and the patient could always return if he were not feeling as well as when he left the hospital.

The other problem that confronts us is the importation of Mexican laborers who come into the state with their families to help harvest the fruit and cotton. These people, many of them, have active tuberculosis within the family group, and they are centers of infection to an enormous number of people. Many of the counties have such strict hospital requirements that it is impossible for these people to be cared for even if they are very ill. The director has already presented a resolution which was unanimously carried before the San Joaquin County Supervisors' Association, calling for a careful physical examination before these people are allowed to enter California.

Survey of Mexicans in the Los Angeles County Hospital.

A very valuable survey was made by the field workers of the number of Mexicans who were cared for in the Los Angeles County Hospital for the past two years. This survey further substantiates our claim and demands for an adequate physical examination.

The Migratory Consumptive.

Years ago social workers and physicians and nurses and the general public were apt to bemoan the problems confronting them of the indigent migratory consumptive. Looking back on the individual whose lodge, or church, or union, or family and friends took up a collection and bought him a ticket to California where he was a problem with the

local group, one wonders why we ever felt that the individual was a problem, because he could be returned to his home and frequently he was so ill that the problem did not remain a difficult one very long. Now, however, since the migratory consumptive soldier has at last been placed in government hospitals worthy of the name, we are confronted with a new type of migratory consumptive. The remnants of a car can very frequently be purchased for less than it costs for a one-way ticket for one person. It provides not only a channel of transportation for the sick member of the family, but it brings also other members who become dependent. Nearly every town in the southwest realizing what it means in their community to allow these people to gain a residence, have repaired their cars or bought them a tire, but never have failed to buy them gasoline enough to get them out of the community, so that eventually they reach California. The untimely advertising of many chambers of commerce and groups interested in cotton or fruit, lettuce or melons, has also served as an incentive for these people to feel that they can pick up an occasional day's work. Some legislation must be enacted at the next legislature drastic enough to forbid these people becoming a burden on the community. We have solved it to a very large extent as far as tuberculosis hospitals are concerned, and it will have to be solved with reference to these migratory indigents who carry with them a sick member of their family to serve as an appeal for funds.

Cost of Sanatoria.

The bureau frequently receives from other states inquiry as to cost of the various sanatoria in California.

Ahwahnee Sanatorium operated by Madera, Merced and Stanislaus counties in the foothills of the high Sierras, on the well known Wawona entrance to the Yosemite was opened in 1919. This sanatorium is 32 miles from a railroad, the site was chosen after nearly three months of surveying various locations. Extreme heat in summer and fog in winter made any location in the San Joaquin Valley out of the question. The present location is ideal, for it is cool in summer and warm in winter. The buildings are inexpensive in construction but very comfortable, splendidly equipped with the following buildings on the 320-acre site. Administration building, formerly an old hotel, houses the male help and also has a large kitchen that takes care of hospital staff and help, except the children's building which has staff and helps dining room. There is also a twenty-four bed hospital of private rooms; in this building is the examination and operating room, X-ray, the laboratory drug room, treatment rooms for Alpine lamp, with porches for sun treatment so patients can be moved directly from their rooms to the treatment porch without leaving their beds. There is a thirty-six bed infirmary for semi-ambulant cases, one ten bed unit for women patients who are ambulatory, two units of the same type for men, a beautiful twenty-four bed building for children some distance from the other buildings that is operated separately. A fine home for the nurses, a large recreation hall, laundry and power plant complete the sanatorium group of buildings. Besides this there are stables and chicken

Ahwahnee Sanatorium. Children's Building.

These thoroughbred Holsteins supply the milk used at the Ahwahnee Sanatorium.

yards and storage for food. The cost of this sanatorium up to March 31, 1926, was as follows:

Real estate.....	\$20,075 00
Buildings.....	219,984 00
Equipment.....	60,964 52
Live stock.....	10,061 77
Total.....	\$310,985 89
Maintenance and operation.....	313,421 09
Grand total.....	\$624,406 98

The cost has been paid by the counties on the basis of their assessed valuation:

Stanislaus County paying.....	41.410%
Merced County paying.....	32.814%
Madera County paying.....	19.776%

When the bureau first began the agitation for counties to build and operate hospitals there was considerable speculation as to the method to be used for payment. It is obvious that if the assessed valuation is high, the population is proportionately large and in that case the county's number of tuberculous cases is also in proportion. None of the counties operating hospitals together have ever complained of the plan since it is the only fair way in which the amounts needed for building and operation can be met. This hospital to date has cared for about 300 patients.

Alameda County was the first county in California to build a separate sanatorium to be operated under the subsidy. The cost of the land and buildings to date is \$488,854.34. It must be a great source of satisfaction to the supervisors and taxpayers of Alameda County to visit

Arroyo Sanatorium. Alameda County Children's Building.

Stony Brook Retreat Sanatorium, Kern County.

Arroyo Sanatorium and see the splendid young people who are there regaining their health. Arroyo had the first building for children in the state.

Here also has been developed a splendid rehabilitation program that

Sleeping unit for ambulatory patients, Olive View Sanatorium, Los Angeles County.

should be an example to every hospital in the state. The declining death rate in this county is proof of the wise investment made here.

This county also operates at the infirmary at San Leandro a pavilion for advanced cases. These patients also have the benefit of excellent

Children's Building, Tulare-Kings Joint Sanatorium.

Interior of Children's Building, Tulare-Kings Joint Sanatorium.

medical care and treatment. Kern County, operating Stony Brook Retreat on the crest of the Tehachapi Mountains, offers an example of what excellent care can be given in very cheap buildings. The sanatorium was remodeled from an old road camp. The cost of the buildings to date is \$50,000. Provision is made for children and this summer a new twenty-five bed infirmary and twenty-five bed children's building will be built.

Los Angeles County is now providing, at Olive View, care for over 600 patients besides operating 100 beds for advanced cases at the general hospital. The plan for Olive View originally was to use it for early cases. Since the first buildings were built, literally dozens of new buildings for patients, staff, help and storage have sprung up until Olive View looks like a village of busy people instead of tuberculous

patients. A visit at the noon hour will show electric food trucks running down the paved streets in front of the buildings, leaving the food in thermos containers for each building. Schools are provided here for the children and a large occupational therapy building, that can be used for recreation also, is in process of construction. Olive View is trying some interesting experimental work with ex-patients.

The total cost of land and buildings to date at Olive View is \$1,420,284.19.

In connection with the report on Olive View mention must be made of the excellent medical and nursing care there. The outdoor relief department of Los Angeles County has made possible a splendid system of admitting patients to Olive View as well as having a sympathetic understanding of the patients' needs when they leave the sanatorium.

Weimar Joint Tuberculosis Sanatorium.

Sleeping Unit for Women Patients, Weimar Joint Tuberculosis Sanatorium.

Tulare and Kings counties operate a joint sanatorium at Springville in Tulare County. The group of buildings to date consists of an administration and service building, a sixteen-bed hospital, an infirmary for semi-ambulant cases, a sleeping unit for ambulatory patients, a nurses' home, a physician's residence and a very fine building for children. The total cost of land and buildings to date is \$166,486. The 1925 appropriation of the two counties was \$107,885.84.

Humboldt County School for the Tuberculous.

The Weimar group in 1924 reported an appropriation of \$157,154 for maintenance. Weimar is now caring for over 300 patients. Unless one has visited the smaller counties that these patients come from it is almost impossible to realize what the families of this group would have done without this hospital. It certainly has filled a great need and Weimar now has more beds than the average state sanatorium.

San Francisco Hospital.

Humboldt County has provided care for their patients at a cost to date of \$105,000 for the building. They have demonstrated that patients can and do make recoveries in the northern part of the state. This hospital admits Indians with tuberculosis.

San Francisco Tuberculosis Hospital occupies a unique position in the hospital world. The universities of California and Stanford take charge of the medical care here. The hospital offers excellent facilities for teaching purposes, but the patients are most fortunate in having the benefits of the services of the entire hospital staff. The Director believes this hospital is different from any other municipal hospital in the world. Anyone who questions San Francisco climate should see the patients on the roofs and porches taking sunbaths. Excellent provision is being made on the roofs for wards for children.

**Monthly Report for California State Board of Health, Bureau of Tuberculosis,*

Monthly reports are sent in from a number of the larger hospitals. This is printed to show the excellent care that is being given the patients in the San Francisco Hospital.

To date \$27,650.75 has been spent for land for the new sanatorium and preventorium to be built in San Mateo County. Twenty-one thousand, nine hundred eighteen dollars and ninety-nine cents has been expended towards the building. Additional funds are on hand to continue building. A total of \$637,317.66 has been spent on the present building but does not include maintenance which must be figured on a per diem basis.

Clinics.

The clinics continued to diagnose and treat thousands of people during the past two years. New quarters have helped the Los Angeles clinics. The steady growth in San Francisco and Oakland, with the increase in the nursing staff, has placed the follow-up work on a better basis than ever before. The bureau's field supervision has been greatly curtailed the past four years. We have not been able to respond to the demand for surveys, nor have we been able to supervise the follow-up work of the discharged patients from the hospitals. There is a great volume of material in the bureau's files that needs analysis. The need for a trained research worker makes itself felt every day. Special emphasis needs to be placed on high school groups, both boys and girls, and on the teachers. Some of our school laws need amending, with reference to the health of teachers.

Federal Cooperation.

The bureau has continued to cooperate with the United States Veterans' Bureau and the Immigration Department. An effort was made to secure better cooperation with the United States Public Health Service with reference to their placing of men from the merchant marine in this state. Complaints were received from the citizens of San Diego regarding the neglect of these men. An immediate investigation of the institution showed the miserable conditions under which the men had been placed, but aside from removing them, to our knowledge, no effort has been made to care for this group in a government hospital. It is gratifying to report that after nearly seven years of delay, the Veterans' Bureau now is providing adequate care and treatment in comfortable buildings for the men disabled in the World War.

Declining Death Rate.

Our gradually declining death rate in spite of our rapidly increasing population offers hope that we have turned the bend in the road and with it there lies behind misery and unhappiness that we are positive will never enter again in the lives of people in this state whom the White Plague has touched. The legislature and the general public have helped us in our educational campaign and the schools, the moving picture theaters and industries have helped us whenever we have asked it.

Literature and Printed Matter.

We have distributed thousands of pieces of literature on tuberculosis. We have also for use several educational films; anti-spitting posters and cards are distributed and the "Tuberculosis Primer for School Children" is very generally used throughout the state.

Tuberculosis Subsidy Disbursements, 1916 to 1926.

REPORT OF THE BUREAU OF CHILD HYGIENE.**July 1, 1924, to June 30, 1926.**

ELLEN S. STADTMULLER, M.D., Director.

This biennium has seen a gradual development of the activities of the Child Hygiene Bureau that have to do with the placing of part-time nurses in rural areas. It has been our policy to join forces with local groups, private and public, to finance the salary and transportation expenses of public health nurses. We have received, in return for our contribution to the salary, a proportional amount of the nurse's time which has been devoted to maternal hygiene and infant care. Since the beginning of the biennium 41 nurses have been placed in 23 counties for this type of work. After the expiration of one year we have withdrawn our quota in the localities where the community itself was ready to undertake the full responsibility of the nurse's support.

Counties in Which Sheppard-Towner Nurses Were Placed July, 1924, to June, 1926, Inclusive.

Amador.	Napa.

Marin.	Yuba.
Monterey.	

The goal toward which our nurses are working is the saving of maternal and infant lives. The means to this end is frequently the establishment of a health center at which mothers can be advised on hygiene, both for themselves and for their young children. We lend our nurses every assistance possible to the establishment of a health center in their territory, both by personal visits of our staff to examine children and by interesting the local physicians, as well as the women and mothers of the community. As the result of this plan 29 centers have been opened to mothers for conference service. Local physicians who are interested in the health of children render the medical service in these conferences. They receive no compensation for this work, other than the opportunity of handling a large group of children. This type of clinical material is always of advantage to a physician. In some instances the local physicians are not willing to render this service; then the nurse gives advice to the mothers on the general hygiene of their children, discussing such matters as regularity of feeding, sun baths, establishment of proper habits of elimination, ventilation, bathing and so on; this assists mothers in maintaining the health of their children. In the past two years, 43,315 children have been handled by our field staff.

The advisory service to prenatal cases has developed more slowly. The work which has been done along this line has resulted entirely from

As a portion of the work which the part-time nurses have done in their school programs there have been many immunization campaigns conducted, at which preschool children were immunized against small-pox and diphtheria.

To keep pace with the increased number of county nurses we have increased the staff directing their work, by the addition of two nurses to our state staff. The first of these has been at work since October, 1924, spending her time in the field with the county nurse, giving advice and suggestions as to the conduct of her maternity and infancy activities.

When the legislature of 1925 placed the responsibility for inspecting and licensing maternity hospitals and homes on the State Board of Health, this duty was assigned to the Bureau of Child Hygiene. A committee of the State Board of Health reviewed the regulations in force at the time that the Bureau of Child Hygiene started inspections, and after a small number of minor changes, submitted these rules and regulations to the board for approval. Two types of institutions are recognized—the hospital including maternity cases as part of its activities, and the maternity home carried on by women in their own homes. For these two types of institutions somewhat different regulations were adopted. In each case, however, the aim was to provide mothers with such surroundings that their health could be safeguarded during confinement and that the interests of the new-born infants would be protected. The regulations do not require any standardization of personnel, permitting the maternity home to be conducted by any woman who can provide the above mentioned facilities. It has been our policy, however, to make inquiry as to the training of the women in charge of the small maternity homes, so that we may be assured of the type of care the mothers will receive. In general, the inspection has been welcomed both by the medical profession, by the hospitals and by those conducting the smaller maternity homes. In every instance, before inspection is instituted, the physicians are consulted as to the desirability of the homes and their estimate of the women in charge. In this way we work in close cooperation with the profession who use these institutions for their patients. The policy which we are trying to establish is that of friendly instruction and we have, therefore, only withheld license to those institutions not yet up to standard, believing that by repeated visits we can improve the facilities provided.

In order to carry this extra work a second addition to our staff was made—a public health nurse versed in hospital technique. Together with the nurse already mentioned as added to the staff, these inspections have been made at the same time as our advisory and consulting service. Since September, 1925, these two employees have recommended for license 173 hospitals and homes with a bed capacity of 935. They have not, as yet, visited all institutions receiving maternity patients. In many instances we have been able to discourage the opening of maternity homes by those not trained for the care of parturient women or by those not able to provide adequate equipment. The contact with maternity hospitals and homes gives our bureau an opportunity for doing educational work with the expectant mothers, as it provides a means of reaching them early.

Maternity Hospitals and Homes Licensed, October, 1925, to June, 1926, Inclusive.

Alameda County—

Alameda Sanatorium, Alameda.
Crum Maternity Home, Alameda.
El Reposo Sanitarium and Hospital, Berkeley.

Cottage Hospital, Santa Paula.

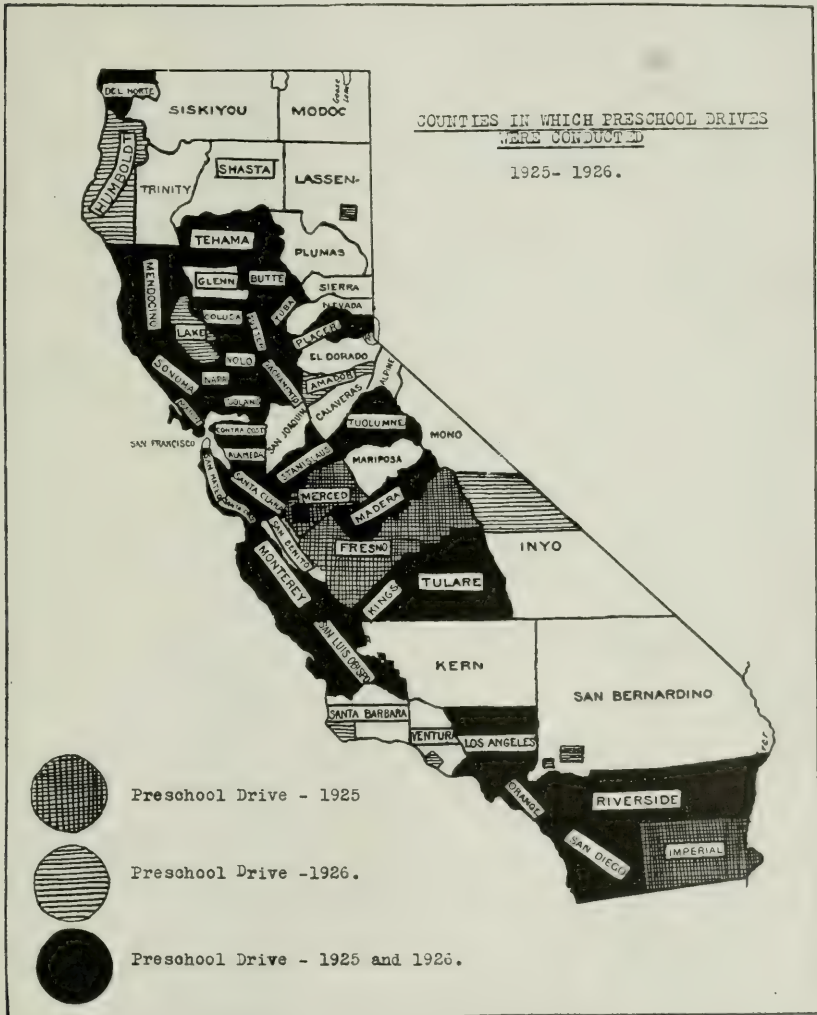

Yolo County—

Mrs. Gaither's Home, Esparto.

A more general knowledge of the work of our department has brought about a demand for talks to groups of women upon the hygiene of maternity and infancy. To meet this demand a lecturer was added to our staff in October, 1924. This physician has traveled upon a pre-arranged schedule at the invitation of local groups of men and women, giving them information on the means of improving child health. The number in such audiences varies greatly; by far the greater part have been small groups interested and alive, who have taken the opportunity after the formal talk was finished, of bringing forward individual problems for solution. In other instances large groups of women, leaders in their own communities, were addressed on maternal and infant hygiene in the course of some convention or similar gathering. During the biennium the lecturer has addressed 30,954 persons, as well as assisted in other work of the department.

Some years ago the Bureau of Child Hygiene made a major activity of the examination of young children in children's conferences scattered in the rural area and small towns of the state. With the growth of

interest in child hygiene manifested during the last four years, this type of work as a routine procedure has been abandoned; our own success in forming regular health centers in many of the smaller towns has done away with the need, also. We now only hold conferences in order to stimulate given communities to initiate their own activities or to assist in launching some work of this kind planned by local people.

Consequently, the number of children examined by the state staff has been materially reduced from year to year. During the biennium the two physicians on the staff have examined 3420 children. Exhibits have been arranged in 14 different fairs. It is not possible to estimate the number of spectators at such fairs. Material has been lent to other organizations and prepared for community pageants.

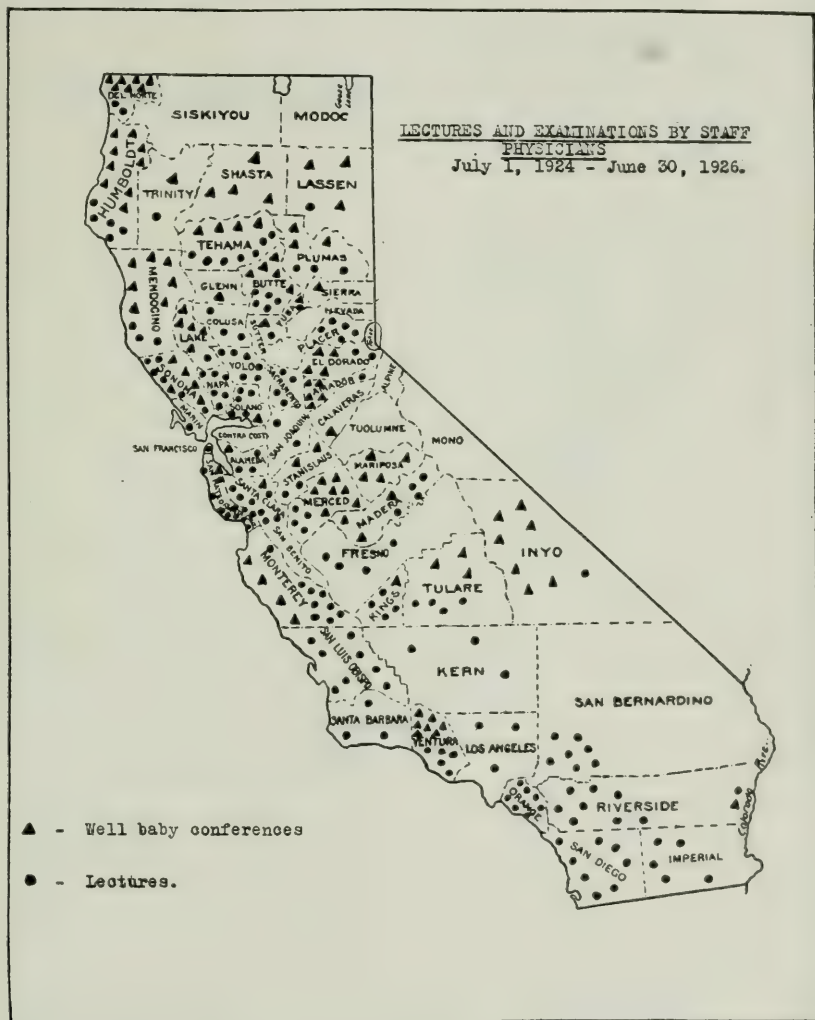

Infant and child welfare conferences were held in the following communities:

Our office staff has been augmented by the addition of a part-time stenographer in the Los Angeles office, who cares for correspondence from the southern end of the state, serves as a clerk to the maternity home inspector of that district and assists in the distribution of literature upon request from the neighboring territory.

We are constantly improving our birth registration in this way: as each birth certificate is received in the Bureau of Vital Statistics, a

clerk employed by the bureau credits it to the individual physician signing the certificate. Once each year every physician receives a notice of the number of births credited to his name, with an invitation to compare this list with his own office records. If any discrepancy is found the actual names are then sent to him so that we may be assured that we have a complete record of the confinements attended by every doctor. By this check we have increased the birth registration by some two

hundred names and have been able to show that the high death rates in certain counties of the state are more apparent than real as they are due to lack of registration. We have succeeded in placing nurses in a few of these counties, who will make it their duty to stimulate birth registration with a view to showing the real infant mortality rate of the area.

Our plan for a campaign to furnish physical examinations during April and May to the children who will enter school in the fall has been carried out during each year over an increasing number of counties. Our bureau has furnished for this campaign the following material:

1. Organization. In 1925 a special nurse was employed to visit counties forming county committees. In the following year our own staff nurses accomplished this same work. These county committees

consisted of a representative from the medical and dental professions, the county superintendent of schools, the public health nurse, interested club women with an additional member to handle publicity. The work of this committee was to decide upon the districting of the county, to assist in selecting local committee members and distributing material from our office. As the National Congress of Parents and Teachers has made such a campaign a national issue we received valuable support from the local parent-teacher associations.

2. Form publicity was sent out outlining the need and the object of our campaign, given local application by the publicity chairman and widely distributed through the newspapers. Other means of reaching the parents of entering school children were used, especially that of the school departments, as notices were sent home through children already in school. The motion picture houses exhibited slides furnished by our department.

3. The cooperation of the county medical societies was secured by letters addressed either to them as organizations or to their members. They responded most generously so that a very small amount of work was left for the pediatricians employed by the state to fill such gaps in the plan. During the two years' campaign only 31 days of work were given by the state staff of pediatricians employed for the purpose. These physicians worked with the local doctors where extra help was needed or alone in rural areas where no physicians were to be had.

4. Triplicate cards to record the physical examinations were distributed, one part being destined for the parents, one for local use and one to be returned to our office. For the two years our records show the physical examination of 15,896 entering school children.

During the course of the biennium four new pieces of literature have been issued: The first, "Care of the Baby," a brief statement in simple language of the essentials in the care of a new-born infant; second, study outlines on prenatal, infant and child hygiene for the use of mothers or of groups of women wishing to acquaint themselves, by personal study, with the details of child care; third, our diet lists for these three age groups have been revised, being brought up to date in line with modern conception of infant feeding; all stock formulae have been eliminated from the diet lists as it is our belief that infants should be treated as individuals and their food selected according to their needs; fourth, through the courtesy of Dr. H. L. Langnecker we were permitted to publish a pamphlet on posture in young children from notes taken at a lecture which he delivered.

Our office staff has distributed 183,479 pieces of literature dealing with our work, as well as attending to the usual routine of correspondence and business detail. We have continued to issue the prenatal letters mentioned in our last report and have distributed, either through physicians requesting the service or directly by mail, 8053 sets.

REPORT OF THE BUREAU OF SANITARY ENGINEERING.**July 1, 1924, to June 30, 1926.**

C. G. GILLESPIE, Director.

The functions of the bureau are as follows:

Safeguarding drinking water supplies, making sewage disposal inoffensive and harmless and keeping swimming pools sanitary, all as provided by the sanitary engineering enactments in the statutes. There are altogether 1500 major sanitary engineering works in the state. The bureau has three engineers, including the director, all sanitary engineers by training. They reach every large settlement and many of the smaller ones in the state.

Output of Work.

The work of the bureau, summarized from the biennial reports, is as follows (fiscal years):

	1915- 1916*	1916- 1918	1918- 1920	1920- 1922	1922- 1924	1924- 1926
Laboratory determinations -----	5,750	38,500	44,700	42,700	27,500	4,600
Number of laboratory workers--	1 to 2	2 to 6	4	4	4 to 6	1 to 1.5
Permits granted -----	35	77	90	41	113	153
Engineering activities (exclusive of conferences and communica- tions) -----	287	842	720†	968	1,899	2,093
Number of engineers-----	1.7	3.8	3.8	4.2	3.4	3.0

*1 year.

†Wartime.

The engineering activities are inspections, investigations, tests, reports, addresses, hearings, but do not include communications or conferences. Up to January 1, 1923, conferences were so unimportant that no record of conferences was kept. For 1922 to 1924 there were 865 conferences and in 1924 to 1926, 2140 conferences, making a total of 2764 activities 1922 to 1924 and 4233 for 1924 to 1926.

Costs per test in the laboratory have ranged as follows: 1915-16, \$0.54; 1916-1918, \$0.21; 1918-1920, \$0.21; 1920-1922, \$0.25; 1922-1924, \$0.30; 1924-1926, \$1. The rising costs of 1922 to 1926 are due to small scale operations and lack of a Director in the laboratory.

The activities of the bureau spread from one end of the state to the other.

Permit action involves considerable investigation and office work. Those granted for sewage disposal alone in the past four years numbered 132, representing an outlay of approximately \$6,000,000 to serve over 1,500,000 people. The cost of the investigation, review of plans and permit action is less than one-fifth of one per cent. There is now pending before the board sewage disposal application of the county sanitation districts of Los Angeles to serve scores of cities, with an expected population of 3,000,000 in 1950. Bonds already voted total close to \$10,000,000. The bureau has spent over two months of investigation on this application.

There is a decided impetus in California in matters depending on engineering for public health and cleanliness. There is every reason to suppose this will continue as far into the future as we can see. Larger sums of money running into millions are being expended for

the purpose. The number of projects is increasing and process refinements improving. It is noticeable that less education and promotion is needed nowadays to get sanitary engineering improvements under way. City officials from one end of the state to the other are alive to better sanitation, particularly sewage disposal. As an illustration, in a recent poll of topics for the annual program of the League of California Municipalities sewage disposal was only second in interest to zoning.

People depend rather implicitly on the State Board of Health to guard their welfare in sanitary engineering as in other health matters. Even the individual is finding a sort of comfort in feeling that sanitary works affecting his welfare are under the scrutiny of the board and bearing its approval. He finds that his own familiarity with the more or less involved technical processes is inadequate, nor has he the time to attempt to assure himself by other means. We detect this dependence on the board in the laboratory examinations of drinking water supplies, approval of recreation beaches, camps and other places where the public gathers, approval of projects for sewage disposal of whatever scale, permits for swimming pools, oyster bed certificates, and in fact every branch of the bureau's activity. It is plain that the board must continue to furnish such an amount and caliber of service and advice as to hold that degree of respect from others for its opinions. Permits and approvals are given only when they are fully deserved and the board must thereafter be prepared to see that the things which it permits or endorses are maintained according to its expectations.

The calls upon the bureau are increasing. In fact, most of the work for the biennium has been of a routine nature. In one sense this is to be regretted. To comply with them, important pieces of work of far-reaching consequence must be passed up or else too hurriedly disposed of for the good of the future. We should have liked to concentrate more thoroughly on particular sanitary problems of broad scientific usefulness throughout the state.

In sewage disposal, there is still the problem of the small unsewered town too poor to put in sewers or dispose of the effluent. Sanitary plumbing in the country is now a necessity, but there is need for more help in rural sewage disposal, both as an economic matter and for sanitation. The number of community sewage plants is steadily increasing with better provision for high grade effluent and less nuisance in the vicinity. The trend is toward conservation of the native values of sewage. Thorough reclamation of effluent for irrigation uses, and turning the sludge into a rich fertilizer, is now attainable by cities and towns at reasonable cost, and is being practiced in many places. The advances in the science of sewage treatment call for somewhat greater outlays than those to which the past decade has been accustomed, but the expense is indeed reasonable and decidedly worth while.

A further hopeful sign of the times is the broader planning for sewage disposal in a comprehensive way. This is illustrated by the formation of sanitation districts in Los Angeles County looking to a future population as great as that in the city proper. Orange County cities have joined by contract for a similar outfall purpose.

Some new and threatening problems may be seen ahead. The most menacing of these is recreational typhoid. The automobile has made possible the widest opportunity for travelers to unwittingly come in contact with dangerous water supplies, sewage polluted beaches and insanitary conditions generally, particularly in recreational places. Most of the typhoid of former years was epidemic in character. Careful investigation generally ferreted out the cause and it was eradicated. This recreational form of typhoid is apt to be sporadic rather than epidemic. It seems to us the new conditions impose a special burden to detect everything possibly conducive to typhoid, and to do away with it.

The migration of people in congesting numbers to unsewered suburbs and to small lots in the mountains for vacation brings the dangers of neglected sanitation. In the vacation regions the difficulties are even more unsurmountable because of the short seasonal use of the premises and the fact that the expense for community sewers is fully equal to that in cities. Difficulties in sewage treatment in vacation regions are generally extreme. These vacation seekers often purchase cabin lots along mountain brooks and streams used as sources of water supply in a number of cities and towns in the state.

Demands for cleaner streams, free of offensive sewage pollution, are gaining momentum all over the country. At many places upon the major streams where factory wastes characterize the sewage, any demand for sewage treatment simply can not now be met without the provision of a research fund to learn economical and sure ways of purifying or treating the peculiar sewage encountered. Scores of such wastes are already established more or less widely, in fruit canneries, reduction plants, citrus by-product plants, cheese factories, fish canneries, sugar factories and molasses digestion plants. There is no economical or known way of treating these wastes satisfactorily. Naturally efforts to promote treatment of these wastes is futile. The bureau has estimated that a fund of not less than \$100,000 is necessary to carry on waste disposal research for a two-year period.

Along the beaches of almost the entire coast we find another problem. These places are the scene of great throngs on every holiday. Most of the beaches are fouled by sewage. Although screening of sewage and extension of outfalls have been made in a number of instances, the total dangers to recreation are on the increase. The only effective means of arousing action has been the occasional resort to quarantine signs on such beaches, but vandals and concessionaires whose business is hurt are too prone to destroy them. It will require police intervention to keep these signs posted.

Tagging of roadside water supplies, using signs resembling those along the highways to tell travelers where the drinking water is safe or otherwise, has been a popular kind of work in the East. In this state, where the need of it is greater, we have done nothing for the reason that unless the work of investigation is well done public confidence in signs would not long be maintained. The mileage of California roads and vast number of supplies would call for a staff greater than we now have.

Swimming pools are growing in popularity and as a public health problem. The Swimming Pool Act requires that all such pools obtain a permit from the board on the basis of prospects for good sanitation

and proper equipment. Though the number of swimming pools in California is over 500, only about 5 per cent of our time can be devoted to this kind of sanitation. Out of 153 permits granted this biennium, 58 were for swimming pools.

Oyster bed certification has been undertaken as a part of the public health service program in all the states. This industry suffered greatly as a result of typhoid outbreaks in the East attributed to contaminated oysters. There are three producing beds in California. Two of these have been investigated and certified as sanitary.

No improvements of note in city water supplies have been made in these two years. Chlorination of water supplies is on the increase and is becoming more dependable. Older installations are being replaced by newer types of apparatus. There are now nearly 100 community supplies in the state being made safe by this treatment. Undoubtedly the safety of supplies so treated is more uniform than in former years and there is less complaint due to over chlorination.

The use of bottled water is apparently on the increase. In a survey by the bureau of bottled water consumption in Los Angeles city it was found that the bottled water bill was nearly \$2,000,000 annually, or more than would have been the entire yearly cost of filtration of the whole water supply. When people are willing to double or treble the cost of water for the sake of softness or spend such huge sums for bottled water, it is difficult to understand why modern filtration of supplies needing it is so slow in gaining recognition in this state.

There are now twenty-four types and degrees of sewage treatment in vogue throughout the state, showing how far from possible it is to standardize in this field and how much has been accomplished in better adaptation of methods to the individual needs.

Sewage Treatment Plants in California as of July 1, 1926.

Fine screens only—Orange County Joint Outfall, Long Beach, Los Angeles (1925), Santa Barbara (1926), Ventura.

Septic tanks only—(Main installations). Bakersfield, Bishop, Boulder Creek, Calexico, Calistoga, Carmel, Clovis, Coalinga, Colfax, Colusa, Concord, Coronado, Escondido, Fortuna, Fresno, Gilroy, Gridley, Gustine, Hammonton, Healdsburg, Hemet, Hobart Mills, Huntington Beach, King City, Laguna, Lakeport, Lemoore, Lincoln, Lindsay, Livermore, Los Banos, McCloud, Millwood, Modesto, Monrovia, Monterey, Mountain View, Mt. Shasta City, Mountain View Sanitary District, National City, Newman, Oceanside, Orland, Oro Grande, Oroville, Oxnard, Patton State Hospital, Pittsburg, Pismo (1926), Pleasanton, Red Bluff, Rio Vista, Riverbank, Roseville, San Bernardino, San Bruno, San Diego (9), San Juan Capistrano, Sanger, San Joaquin, San Luis Obispo, San Mateo, Santa Clara, Santa Cruz (several), Saratoga, Scotia, Sebastopol, Shasta Springs, Sonoma, Sonora, St. Helena, Susanville, Turlock, Vacaville, Walnut Grove, Willits, Willows, Yreka.

Imhoff tanks only—Arroyo Grande, Arrowhead Lake (south plant), Atascadero, Auburn, Burbank (1925), Chico, Chino, Clyde, Colma (S. H. Dennis, private system), Corcoran, Delano, El Centro and Imperial, El Monte, Elsinore, Etna Mills, Exeter, Folsom, Fowler, Hanford, Hollister, Indio (1926), La Mesa, Lompoc, Martinez, Mendocino State Hospital, Newcastle, Newport Beach (2), Ripon (1925), San Diego (3), (1925), Santa Maria, Santa Paula, Seal Beach, Selma, Stockton State Hospital Farm, Taft, Torrance, Ukiah, Williams (1925), Winters.

Fine screens and chlorination—Santa Monica (1925), Stockton (north plant).

Septic tanks and chlorination—Merced Falls, Santa Rosa (1925).

Septic tank and sand filters—Southern California Edison Company, Big Creek (2), (1925).

Doton septic tank and sand filters—Manteca.

Imhoff tank and chlorination—Compton, Holtville (1926), Stockton (south plant), San Anselmo Sanitary District.

Septic tank and contact beds—Dixon.

Imhoff tank and separate sludge digestion—Visalia.

Imhoff tank and sand filters—Pacific Coast Borax Co., Death Valley Junction (1925), Porterville (1926), Blythe (1925), Firebaugh (1925), Paso Robles (1926), Patterson (1925).

Septic tank and sprinkling filter—Ventura State Home for Girls at Ventura.

Imhoff tank and sprinkling filters—Biggs, Dinuba, Dos Palos (1926), Folsom, Livermore Sanitarium, Madera, San Fernando (1926), San Juan Bautista, Sonoma State Home at Sonoma, Tracy, Old Soldiers' Home at Yountville.

Imhoff tank and contact beds—Santa Fe Railroad at Calwa, Walnut Creek.

Activated sludge plant with septic tank—Tulare (1925).

Activated sludge plant with chlorination—Folsom Prison at Represa.

Septic tank, separate sludge digestion and sand filters—Ceres.

Imhoff tank, sand filter and chlorination—Yosemite National Park.

Imhoff tank, separate sludge digestion and sprinkling filter—Los Gatos (1925), Morgan Hill.

Imhoff tank, sprinkling filters and sand filters—Ojai (1926), Corona (1925), Reedley (1925), Kingsburg, Southern California Edison Co. at Big Creek (1926).

Imhoff tank, sprinkling filter and chlorination—Arrowhead Lake (north plant), Brea, Davis.

Fine screens, Imhoff tank and sprinkling filter—Whittier (1925).

Activated sludge plant with Imhoff tank and chlorination—Pomona (1926).

Activated sludge plant, fine screens and chlorination—Lodi, Pasadena.

Final disposal on sewer farms—Arroyo Grande, Bakersfield, Burbank, Calistoga, Chico, Chino, Cloverdale, Clovis, Colton, Corcoran, Dixon, Elsinore, Exeter, Fowler, Fresno, Hanford, Hemet, Hollister, Indio, Kingsburg, Lemoore, Lindsay, Livermore, Livermore Sanitarium, Marysville, Mendocino State Hospital, Merced, Modesto, Needles, Ontario and Uplands, Orland, Pomona, Redding, Redlands, Riverside, San Bernardino, Sanger, San Juan Capistrano, Santa Maria, Santa Paula, Santa Rosa, Saratoga, Selma, Sonoma, St. Helena, Susanville, Tulare, Ukiah, Vacaville, Visalia, Willows, Yountville (Old Soldiers' Home).

Total kinds or combinations of sewage treatment plants, 24.

Total number of sewage plants, exclusive of sewer farms, 182.

The largest single enterprise for sewage collection is that of the county sanitation districts around Los Angeles County, including disposal works into the ocean. Bonds already voted aggregate nearly \$10,000,000 to serve the present population of around 350,000 people, and a future population of 3,000,000.

Santa Barbara has completed a 3000-foot outfall of 42-inch diameter, including a fine screening plant. On account of the anticipated difficulties of disposing of screenings, the outfall was put in use without the screening plant. So far the disposal has been entirely satisfactory and the beach is entirely free of sewage contamination.

Santa Cruz has bonded itself for \$450,000 to construct a system of intercepting sewers to carry all sewage from San Lorenzo River and the water front to pump it, after fine screening, into the ocean through a 2000-foot outfall. This outfall is to be anchored on the rocky bottom of the ocean floor and terminated in a depth of about 30 feet.

The city of Watsonville has under construction a 1600 foot outfall into Monterey Bay, employing fine screening prior to discharge. This

installation takes the place of sewage disposal into Pajaro River, a stream which is a veritable lagoon most of the year.

A summary of the activities of the bureau during the biennium is as follows

Tabulation of Work Performed, July 1, 1924, to June 30, 1926.

	<i>Sewage</i>	<i>Water</i>	<i>Swimming pools</i>	<i>Garbage</i>	<i>Shellfish</i>	<i>Misc.</i>	<i>Totals</i>

REPORT OF THE BUREAU OF FOODS AND DRUGS.**July 1, 1924, to June 30, 1926.**

M. E. JAFFA, Director.

The tenth biennial report of the activities of the Bureau of Foods and Drugs is presented herewith. The work of the bureau should not be confined to police work alone, the extent of which is fully set forth in the tables forming part of this report. It is true that such work is absolutely necessary, both because it is called for by law and also for safeguarding the food and therefore the health of the consumer.

And to protect the honest manufacturer, there should be, however, in addition to this essential police duty, a certain amount of time and effort devoted to research work in food chemistry and nutrition, and until the two lines of activities are in full force, the Bureau of Foods and Drugs will not be functioning at the optimum.

The efficiency of a bureau like the Bureau of Foods and Drugs, State Board of Health, can not always be judged by the amount or quantity of analytical work reported. In fact, if, as years went by, more and more analytic work were reported it would indicate a lack of efficiency in that the educational efforts of the bureau should be of such a character that fewer and fewer violations of the Food and Drug Law should occur. Again, it must not be inferred from the foregoing that because there is reported less analytical work that the Bureau is therefore less efficient.

As is well known there are two main kinds of food adulteration, one the harmful, that is, the addition to a food of some chemical or preservative injurious to health, and the other, the addition to a food product some material or materials which are lower in food value or cheaper than the original. The second form is an economic or commercial one, but must be guarded against in order that the honest manufacturer may be protected. It is a matter of congratulation that the first form of adulteration just referred to is only rarely met with, with the exception of chopped meat, in the course of the laboratory examination. Unfortunately, it will be noticed by referring to the table of analyses that 30 samples of chopped meat out of 37 submitted were adulterated with a harmful chemical—namely sulfurous acid or one of its compounds. This, according to the law, is illegal in that the use of sulfurous acid or its compounds is prohibited in meat or meat products.

Of the remaining 445 violations of the food law, by far the larger majority consists of mislabeling or misbranding, in that there have been harmless substitutions made for more expensive material, and a better grade of food material. Again, a large number of violations were due to the fact that the article was an imitation of the genuine and not properly labeled. These are, as previously stated, commercial frauds which must be safeguarded against in order that the manufacturer of the pure article is protected in his business.

It must not be inferred from the foregoing that the activities of the Bureau of Foods and Drugs is confined to the laboratory examinations of samples submitted by state inspectors and state institutions.

There is a very large correspondence incident to the work of the bureau, furthermore, much time is devoted to the holding of conferences and consultations with those deeply and vitally interested in the work.

The personnel of the bureau has also been active in connection with educational enterprises. Too much importance can not be placed on this branch of the activity of the bureau. Lectures have been given before different associations, clubs, etc., which have been the means of interesting the general public.

It is probably true that the average person does not appreciate the importance of proper supervision and inspection of the manufacture and sale of feeding stuffs intended for cattle, poultry and swine. Before the passage of the Feeding Stuffs Act there were on the market a large number of preparations, so-called feed stuffs, for which a high price was asked but in connection therewith low nutritional worth. The passage of the Feeding Stuffs Act in January, 1919, was a most excellent piece of work and has been productive of much good. In 1924 the board reissued the law with revision of rules and regulations and additional decisions as issued by the Association of Feed Control Officials of the United States. In accordance with the provisions of the law the standards of commercial feeding stuffs shall be the latest revision of definitions of the feedings stuffs adopted by this association. Therefore, the revision in 1924 was a progressive movement and has been of considerable assistance to the honest manufacturer, in addition to further safeguarding the feed stuffs sold.

It may be of interest to note in passing that propaganda is now being undertaken with a view of either revising and improving this act so as to include standards for one of the most important products we have in connection with the feeding of poultry, skimmed milk and buttermilk products. The nutritional worth of these has been more than emphasized by recent work in the Agriculture Experiment Station. An effort will also be made to revise the standard for alfalfa hay and alfalfa meal. Alfalfa hay and meal when properly prepared and true to name constitute two of the most important feed stuffs at the command of the cattle, poultry and dairymen. At present there is no standard for these products; but it is to be hoped that an adequate working standard will be incorporated in the California Feeding Stuffs Act at the coming session of the legislature. This propaganda involves time and effort, but is considered well worth while.

The table of analyses indicate that 106 samples of feeding stuffs were examined, of which about one-third were found to be in violation of the California Feeding Stuffs Act, but the violation was not of a harmful nature. In most cases the guaranteed percentage of protein was higher than that found by examination in this laboratory. This is merely an illustration again of the fact that the violations that occur are not of a harmful nature, but mainly those of mislabeling or misbranding in that a cheaper article has been substituted for a more expensive one. It is necessary, however, to guard against this form of adulteration in order to fulfill one of the main objects of the general food law, and that is to protect the honest manufacturer.

The cooperative work of the Bureau of Foods and Drugs in the matter of the examination of supplies furnished the state institutions

has formed an important part of the work during the last biennium. This work might be termed constructive, in that the purity of the food and food products is practically guaranteed by this cooperative work. The wholesaler and jobber is fully aware of the fact that the state laboratory is the basis of the award of the contract as far as quality is concerned, and furthermore, they know that delivery samples are also periodically examined. There is thus insured to the state a high grade of the food and food products.

An examination of the analytical data presented in this connection indicates only thirteen samples out of a total of about 300 which were in violation of the food law and out of these thirteen, eight are vinegars, so that it is easily understood that the standard of the foods purchased, with but few exceptions, meets with the state's specifications for such products.

**Articles of Food Condemned Upon Physical and Chemical Examination as
Unfit for Food July, 1924, to June, 1926.**

As will be seen by the following tabulation a large amount of food was condemned and destroyed during the biennial period, 1924-1926. This phase of the work of the state laboratory is very important and has been productive of much good. The benefits are twofold; in the first place, there is eliminated from the open market food spoiled in one way or another, the consumption of which would bring about serious digestive disturbances, if not worse. In the second place, the fact that food establishments are carefully inspected by state men brings about a much better attitude of mind of the dealer. It must be understood, of course, that these statements apply to but few dealers in the state, but unfortunately these men do not consider the public health to the extent they should.

Berries -----	1,229 lbs.
Candy -----	15 lbs.
Cheese -----	18,040 lbs.
Eggs, frozen -----	1,025 lbs.
Fish: Canned crab -----	2,736 lbs.
Sardines, potted -----	30 lbs.
Sardines, canned -----	4 lbs.
Tuna -----	11,592 lbs.
Clam soup -----	1,620 lbs.
Clam juice -----	738 lbs.
	16,720 lbs.
Fruit: Dried—Dates -----	50 lbs.
Figs -----	4,160 lbs.
Prunes -----	2,400 lbs.
Raisins -----	1,225 lbs.
	7,835 lbs.
Fresh -----	8,350 lbs.
Preserved -----	2,205 lbs.
Syrups -----	77 lbs.
Hominy -----	10 lbs.
Meats -----	79 lbs.
Milk, condensed -----	864 lbs.
Walnuts -----	6,913 lbs.
Olives -----	24 lbs.
Sugar -----	2,700 lbs.
Tomato puree -----	20,464 lbs.
Tomato sauce -----	5,000 lbs.
Turkeys -----	599 lbs.
Vegetables: Fresh -----	28,300 lbs.
Canned (spinach) -----	4,884 lbs.
Total -----	125,333 lbs.

SUMMARY.

It will be noted by the tabulations presented that the total number of food and drug samples examined was 1804.

Total number of samples not in violation of the law -----	1,329
Total number of samples in violation of the law -----	475
Total number of samples examined -----	1,804

This figure, however, does not present the total number of samples received at the laboratory, which was upwards of 5000. A macroscopical examination of the samples received indicated that only about

one-third required extended examination, as shown by the table of analyses herewith. A very large number of samples of tomato paste and other tomato products were submitted, but only a few necessitated complete examination.

While it is true that the number of examinations and analyses reported is not very large, it must not be inferred that the continued inspection of food establishments can be relaxed, because if inspections were not regularly continued, the old condition which obtained previous to the passage of the California Pure Foods Act would be in full blast in a very short time.

Again, it has often been asked why, if the California law is based on the federal law, it is necessary to practically duplicate the work of inspection and laboratory examinations as conducted by the Bureau of Chemistry, U. S. D. A. The answer to this is, that the federal government have jurisdiction over intrastate affairs, in other words, a manufacturer of food products could place on the market in California, adulterated, misbranded, and mislabeled products, concerning which no action could be taken by the federal government, because the products were made and sold *only* in California.

REPORT OF THE BUREAU OF REGISTRATION OF NURSES.**July 1, 1924, to June 30, 1926.**

ANNA C. JAMME, R.N., Director.

The biennium closing July 1, 1926, marks the thirteenth year of the administration of the act. Each biennium has shown a steady increase of work; a greater number of applicants for examination, and applicants for registration without examination. There has been an increase of students in the schools during this biennium which had fallen considerably during the previous period. Renewal of certificate has likewise increased in number due to the larger number of registered nurses in the state. The directory of registered nurses has been published and may be obtained on request. The clerical work in connection with examination and registration has greatly increased, and although the clerical force has not been enlarged, this undoubtedly will have to be done in the near future. All unnecessary detail has been eliminated without reducing the efficiency of the work. The office in Los Angeles was closed from July 1923, to July, 1925, but reopened in September, 1925.

Schools of Nursing.

The number of schools of nursing has decreased. During the first six years of the work there were 73 accredited schools. At present there are 55, which is due to voluntary closing of inadequate or very small schools where it was impossible to provide the course of instruction in accordance with the requirements of the board.

Appointment of Inspectors.

On July 1, 1925, two assistant inspectors of schools of nursing were appointed by the State Board of Health, one with headquarters in San Francisco, and one appointed for the southern part of the state with headquarters in Los Angeles.

Inspection of Schools.

Inspection was resumed August 1, 1925. Every accredited school has been covered this fiscal year by a complete inspection; observation of teaching in various subjects has been made and reports submitted in both instances. In the course of their work, the inspectors have visited high schools, private schools, state colleges, junior colleges, for the purpose of conferring with teachers engaged in teaching students of nursing and to give information concerning admission requirements, course of instruction and other points desired by students contemplating entering nursing schools. The following table shows to some extent the work covered by the inspectors.

Complete inspection of hospitals and schools	81
Partial inspection of hospitals and schools	75
Inspection of teaching methods	172
Conferences with superintendents of nurses	66
Conferences with instructors in groups	10
Conferences with board members	18
Conferences with student nurses	26
Conferences with graduate nurses	3

Renewal of Certificate.

The law requires that the certificate shall be renewed each year before March 1st, and a directory of registered nurses published. The renewal during the biennium has been as follows:

July 1, 1924, to July 1, 1925.....	6,343
July 1, 1925, to July 1, 1926.....	7,010

Examinations.

Five examinations have been held during the period of this biennium. These examinations are given simultaneously in Sacramento, San Francisco and Los Angeles on the third Wednesday of February, June and October.

<i>Examination</i>	<i>Number entered</i>	<i>Passed</i>	<i>Failed</i>
October, 1924.....	358	236	122
February, 1925.....	342	270	72
June, 1925.....	364	296	68
October, 1925.....	354	248	106
February, 1926.....	391	345	46
Totals	1,809	1,395	414

Certification of Applicants to Schools of Nursing.

Applicants for admission to an accredited school of nursing are certificated by the bureau in order to comply with the requirements of the law in regard to education and age. The board requires that applicants shall be at least eighteen years of age and shall have had one year of high school or present a satisfactory educational equivalent. That applicants may not be disqualified at time of examination, certification is done and insures the student of her eligibility on these two points. There were 1768 certificates issued in 1924 and 1910 certificates were issued in 1925.

The Curriculum.

The curriculum has not been changed during this biennium. The minimum length of course of instruction is twenty-eight months. Nurses who cover a course of instruction and practice in an accredited school of nursing of twenty-eight months and who present evidence showing they have received instruction and practical experience as required by the board are eligible for examination.

Advanced Courses.

Students who desire to pursue instruction beyond the basic course may do so within their own schools or in affiliating institutions. Advanced courses are approved by the State Board of Health before such courses may be established. It is considered that these courses must be on a graduate basis, both in content of theory and practice. Students are eligible for examination and certificate as registered nurse following on the completion of the basic course. The diploma of the school may be issued on completion of the advanced courses.

Foundation in Nursing Education.

At the close of the seventy-sixth fiscal year there was in the state treasury to the credit of the Nurses Registration Fund an unexpended balance of approximately \$70,000. The State Board of Control and the State Board of Health conferred with the State Nurses Association as to their wishes in regard to the disposition of this balance. It was unanimously agreed by the board of directors of the Nurses Association that this fund should be used to establish a professorship at the University of California, Berkeley, for graduate study in administration and teaching in the schools of nursing. The legislature of 1925 passed a bill authorizing the State Board of Control and the State Board of Health to transfer the sum of \$70,000 to the regents of the university for this purpose. The establishment of this foundation marks an important step in nursing education in California and makes it possible to give graduate instruction to those who will eventually become administrators of schools of nursing and teachers of student nurses. The schools can only develop through good administration and teaching and heretofore it has not been possible to obtain this special instruction in California or even in the western states.

Reduction of Registration Fee.

The legislature of 1925 reduced the fee for examination and registration from \$15 to \$10. Due to the increased number of registrants it was found that the work could be amply supported by a ten-dollar fee. There is no state appropriation, the work being carried wholly by means of the registration fee.

Allied Work of the Bureau.

Aside from the routing work the bureau has aided in nurses institutes, students vocational conferences special lectures, and attendance at educational meetings. Two institutes were held during the early part of 1926, one in San Francisco, and one in Los Angeles, arranged for superintendents of schools of nursing and instructors. Vocational conferences for student nurses were held in San Francisco, Oakland, and Los Angeles, which were attended by senior students from schools located in these cities. These conferences were concerned with activities of graduate nurses. The education of the student nurse is so closely related to general education that it is necessary to keep abreast of methods of teaching and educational movements and to this end the director and assistant inspectors have attended meetings and conferences on subjects pertaining to general education and health education; they have visited colleges and universities, junior colleges and high schools. An interesting development in the last biennium has been cooperation with the junior colleges of Riverside and Los Angeles for instruction during the preliminary period of the nurses training. It is anticipated that these affiliations will increase.

REPORT OF THE BUREAU OF VITAL STATISTICS.

By L. E. Ross, Director.

The principal feature of the California vital statistics for the biennium ending December 31, 1925, was the reduction in the total number of registered births, marriages and deaths during 1925 as compared with the previous year. This is the first occasion in twenty years that the total registered births failed to show an increase; but previous decreases in deaths occurred in 1909, 1916 and 1919. Previous decreases in marriages took place in 1908, 1915, 1916 and 1918.

The variations in the computed rates shown for the present biennium are greater than might be expected from observation of the number of registered events, as the rates are based upon estimates of the population, which was presumed to increase during the period. It must be kept in mind when considering birth, marriage and death rates, that there is available no actual knowledge of the present numerical strength of the population.

The demand upon the Bureau of Vital Statistics for official copies and searches of the vital statistics records almost doubled during this biennium. More than twenty thousand searches of the records were made for persons requiring information from these files for various legal and social purposes. There are at present almost five million names in the vital statistics index, and additions are being made at the rate of one thousand names per day. Approximately 40 per cent of the official copies issued were paid for by applicants at the rate of fifty cents each, the other 60 per cent being issued free for the official use of municipal, county and state officers, for veterans and for school purposes. Steps should be taken to reimburse the department for the expense of this work in order that the record searching may be self-supporting.

Births.

The birth rate for 1924 was the highest ever recorded in California, 22.2 per 1000 estimated population. During 1925 the rate fell to 21.3. The highest 1925 birth rate for areas registering a sufficient number of events to make a rate significant occurred in the city of Alhambra, 41.2 per 1000 estimated population. The lowest rate was for Trinity County, 3.3. For the previous year the high record was held by Anaheim with a rate of 44.2, with South Pasadena low with a rate of 4.1.

All the rates shown in this report are "crude" rates. That is, they are the number of births taking place in the specified areas per 1000 estimated population. They are not especially indicative of the reproductive activities of the populations involved, for no account is taken of such matters as the migration of mothers to hospitals in towns for confinement, the proportion of married women of child-bearing age in the various localities, or other items that normally produce fluctuations in rates and which are effectively covered up in the crude rate. In the town of South Pasadena we have an excellent example of a low crude birth rate produced by the migration of prospective mothers to hospitals in other cities for confinement. As before stated, births are registered in the areas in which they occur, increasing the rate for those areas and producing a corresponding decrease in the areas from

which the mothers come. In 1921 adjustments for migration were made in the birth rates of the different localities, but since then it has not been possible to do this work.

During the present biennium, in cooperation with the Bureau of Child Hygiene, we have worked out and put into operation a system for checking the obstetrical practice of physicians with a view to increasing the effectiveness of birth registration. The results have thus far been very satisfactory, the work resulting in the registration of many births that would otherwise have been overlooked. We have met with gratifying cooperation from obstetricians and it is felt that material progress has been made in this difficult field.

Deaths.

Aside from the fact that there was a slight decrease in the total number of deaths in the state, there appeared to be no unusual features in the general mortality during this biennium. The death rates for both years were what may be considered normal for California. The heaviest mortality was from disease of the circulatory system as usual, with diseases of the nervous system, cancer and tuberculosis next in order, also as usual. Among the communicable diseases, reductions occurred during 1925 in typhoid fever, measles, scarlet fever, diphtheria, tuberculosis and pneumonia, with increases in malaria, smallpox, whooping cough, influenza, poliomyelitis and venereal diseases.

Life Tables.

In this report we present life tables for both sexes and for males and females separately. These are the first detailed life tables constructed for the male and female population of California and are based upon the population and mortality experience of the state for the years 1923, 1924 and 1925. A prior life table for both sexes was constructed upon the mortality experience of 1920 but being based upon a single year was not as indicative of mortality conditions as the present tables which are based upon three years.

The life table affords practically the only means of accurately measuring the longevity of the people, and changes in the average after life time of persons at various ages may be used as the basis for measuring the effectiveness of public health work. The primary purpose in constructing the present tables has been to establish a foundation for future measurement of public health activities and in order that future life tables may be computed by standard methods identical with the procedure followed in making these tables, a detailed statement of each step in the mathematical work has been prepared and is on file in this bureau. Thus it will be possible to calculate comparable life table functions for future years.

The tables presented in this report show complete expectation of life at birth to be 51.49 years for males and 56.21 years for females. The maximum after life time is indicated as 56.89 years for males at age 2, and 60.80 years for females. The tables were constructed upon the assumption that 105 years is the extreme limit of life and resulted in an indication that at midyear, 1924, there were approximately 390 persons in California aged 100 years or more. No definite information

is at hand on this point, but this figure is believed to be far in excess of the facts. There are probably not more than two or three people in California as old as 100 years. But it has not been possible to entirely eliminate from the life tables the tendency to overstate the age of old people. During 1925 alone there were no less than 49 decedents reported to this bureau as more than 100 years old, four of whom were alleged to be over 120 years of age. Careful investigation of such cases usually reveals an overstatement of age of from five to twenty-five years.

Close analysis of the tables brings out a few slight irregularities in the functions which we hope to eliminate by further research. These could have been smoothed by arbitrary methods but in view of the objects sought in the construction of these tables, it has been deemed better to allow the irregularities to remain for comparison with future tables of similar character.

Infant Mortality.

The object of public health work is to increase the life span of the average person, but the end is defeated at once if children die in infancy. Hence the prevention of infant deaths is of great importance in public health activities. It is not to be expected that the lives of all infants can be saved, however fully public health work may be developed. There is an irreducible minimum of such deaths which probably lies in the vicinity of 44 deaths out of each thousand born alive. That is to say, the present goal of work in this direction may be considered as an infant mortality rate (ratio of deaths under one year of age to living births) of 44. In 1924 our infant mortality rate was 67.1 and for 1925 it was 68.5. The trend of these rates in California has been downward for a number of years, although accurate evaluation of the decrease is impossible for the reason that birth registration has not been entirely satisfactory. Since the number of registered births forms the basis for calculation of infant mortality rates, incomplete registration results in a higher computed infant mortality. It has been impossible to determine the extent to which actual conditions have been concealed on this account.

Stillbirths.

The stillbirth rates (ratio of stillbirths to confinements) were low for both 1924 and 1925, being 28.9 and 24.8 respectively, per thousand confinements. Usually the stillbirth rate is in excess of 30 per thousand confinements.

Maternal Mortality.

The proportion of mothers dying from puerperal causes remained practically stationary during the two years, the rate per thousand confinements being 5.2 and 5.6 for 1924 and 1925 respectively.

Automobile Accidents.

For several years past special tables have been carried with reference to the number of people killed in accidents involving automobiles. For the last two years calculations and estimates have been made in an

effort to determine whether or not traffic fatalities actually have been on the increase as indicated by the mortality returns. The results of these calculations give ample encouragement to those who are engaged in the fight against this form of mortality.

During 1924, motor vehicles in California traveled approximately 10,061,228,250 miles. There were 1364 persons killed in accidents involving automobiles. Hence for each fatality there were 7,376,267 miles of travel. In 1925 the total mileage on the same basis was 11,243,549,490 with 1484 fatalities or 7,576,516 miles per death. Comparison of these figures shows that in 1925 there was an increase of 200,000 miles of travel for each fatality in automobile accidents, from which it is seen that the continuous campaign for safety is yielding results. It is not possible to calculate the irreducible minimum of mortality from automobile accidents but we know there is such a minimum. That is to say, when we distinguish between accident "per se" and the results of carelessness and risk-taking on the part of pedestrians and motorists we can realize that there will always be automobile deaths due to pure accident, in proportion to the mileage and congestion of traffic.

One of the most distressing features of automobile fatalities is the large number of children killed. In 1925 no less than 209 children under 15 years of age were victims of fatal accidents while in 1924 there were 222 such deaths.

TWENTY-SECOND BIENNIAL REPORT

OF THE

Bureau of Labor Statistics

OF THE

State of California

1925-1926

WALTER G. MATHEWSON, Commissioner
State Building, San Francisco

CALIFORNIA STATE PRINTING OFFICE
JOHN E. KING, State Printer
SACRAMENTO, 1926

LETTER OF TRANSMITTAL.

STATE BUREAU OF LABOR STATISTICS,
SAN FRANCISCO, September 15, 1926.

To His Excellency, FRIEND WM. RICHARDSON,
Governor of California.

SIR: In compliance with section 3 of the act to establish and support the Bureau of Labor Statistics, approved March 3, 1883, I have the honor to submit herewith, for transmission to the legislature, the Twenty-second Biennial Report of this Bureau.

Respectfully,

WALTER G. MATHEWSON,
Commissioner of Labor.

ACKNOWLEDGMENT.

I desire to express my thanks to the employers and organized workers of California who have cooperated with me in the performance of my duties. I also desire to express my appreciation of the splendid services rendered by the members of my staff in the performance of their respective tasks.

WALTER G. MATHEWSON,
Commissioner.

EXPENDITURES OF THE BUREAU OF LABOR STATISTICS FOR LAW
ENFORCEMENT COMPARED WITH THE BUREAU'S COLLECTIONS
OF UNPAID WAGES: FISCAL YEARS, 1921 1926.

PART I.
THE ADMINISTRATION AND ENFORCEMENT
OF LABOR LAWS.

INTRODUCTION.

The data presented in this report are for the two fiscal years ended June 30, 1926. The figures for preceding years are shown for comparative purposes; so that the interested reader might get a proper perspective of the work of the Bureau during the latest two years of my incumbency.

This is the third biennial report submitted to the Governor and the legislature since I took the oath of office as Commissioner of Labor. It is most gratifying to me to be able to show in this report achievements heretofore unsurpassed. During the two fiscal years ended June 30, 1926, the Bureau has eclipsed all its previous records of successful labor law enforcement. In fact, the accomplishments of my office have been so extraordinary during the period covered by this report that I can hardly hope to be able to show equal progress in the future.

Labor law enforcement is always contingent upon adequate and enforceable statutes. In this respect I have been especially fortunate in having the whole-hearted cooperation of our legislature and Governor Friend Wm. Richardson during the latest four fiscal years of my incumbency. During this time some of our labor laws have been bolstered up and made more effective. Other acts were added to our labor statutes, which has made it possible to secure greater justice and increased protection to the workers of our state. These laws and amendments to the laws are described in detail in this report and are thus made of record in the history of the Bureau of Labor Statistics.

In addition to the strengthening of the labor laws on our statute books, the increased work of the Labor Bureau is further directly traceable to the enlargement of its facilities for service. During the period covered by this report, I have opened new district complaint offices in the cities of Long Beach, San Bernardino, and Santa Barbara.

These new offices alone collected \$120,738 since their establishment. They also received and investigated 2945 complaints against various violations of labor laws. Because of the large increase in the total volume of work, the opening of these new offices did not bring about a lessening of the burden of complaint work in other district offices. Our records show that the district offices already in existence had increased their work in spite of the large volume of work which had accrued to district offices established in other cities.

In extending the service of the Bureau, I have not confined myself to the establishment of new complaint offices. I have also extended the services of the free employment bureaus by opening a permanent office in San Bernardino and seasonal free employment offices in Hollister, Modesto, Marysville, Chico, and Lodi. These free employment bureaus were established especially with a view to meeting the demands for agricultural labor. It goes without saying that I could not have established all these new offices without the consent of the Governor and the State Board of Control, because additional appropriations were required.

A careful perusal of this report will reveal the fact that during the past two years the Bureau has come nearer fulfilling the purposes for which it exists than during any time since its creation in 1883. I am

referring to the improvement in the quality and character of the statistical work of the Bureau. Our monthly publication of the California Labor Market Bulletin, in cooperation with the Bureau of Labor Statistics of the United States Department of Labor, has put our Bureau in the front ranks of government agencies which are collecting information recommended by President Harding's Unemployment Conference in 1921 and by Secretary Hoover's Committee for the Study of the Business Cycle. The timely labor statistics now published by the Bureau furnishes one of the best known indexes of business conditions. The data now being collected monthly will become even of greater value in the future after considerable statistical experience on fluctuations in employment, volume of pay roll, and average weekly earnings has been accumulated.

The law creating the Bureau of Labor Statistics requires that the Commissioner of Labor collect varied statistical information. Sections 3 and 4 of the act creating the Bureau provide:

Sec. 3. The duties of the commissioner shall be to collect, assort, systematize, and present, in biennial reports to the legislature, statistical details, relating to all departments of labor in the state, such as the hours and wages of labor, cost of living, amount of labor required, estimated number of persons depending on daily labor for their support, the probable chances of all being employed, the operation of labor-saving machinery in its relation to hand labor, etc. Said statistics may be classified as follows:

First—In agriculture.

Second—In mechanical and manufacturing industries.

Third—In mining.

Fourth—In transportation on land and water.

Fifth—In clerical and all other skilled and unskilled labor not above enumerated.

Sixth—The amount of cash capital invested in lands, buildings, machinery, material, and means of production and distribution generally.

Seventh—The number, age, sex, and condition of persons employed; the nature of their employment; the extent to which the apprenticeship system prevails in the various skilled industries; the number of hours of labor per day; the average length of time employed per annum, and the net wages received in each of the industries and employments enumerated.

Eighth—The number and condition of the unemployed, their age, sex, and nationality, together with the cause of their idleness.

Ninth—The sanitary condition of lands, workshops, dwellings, the number and size of rooms occupied by the poor, etc., the cost of rent, fuel, food, clothing, and water in each locality of the state; also the extent to which labor-saving processes are employed to the displacement of hand labor.

Tenth—The number and condition of the Chinese in the state; their social and sanitary habits; number of married and of single; the number employed, and the nature of their employment; the average wages per day at each employment, and the gross amount yearly; the amounts expended by them in rent, food, and clothing, and in what proportion such amounts are expended for foreign and home productions, respectively; to what extent their employment comes in competition with the white industrial classes of the state.

Eleventh—The number, condition and nature of the employment of the inmates of the state prisons, county jails and reformatory institutions, and to what extent their employment comes in competition with the labor of mechanics, artisans and laborers outside of these institutions.

Twelfth—All such other information in relation to labor as the commissioner may deem essential to further the object sought to be obtained by this statute, together with such strictures on the condition of labor and the probable future of the same as he may deem good and salutary to insert in his biennial reports.

Sec. 4. It shall be the duty of all officers of state departments, and the assessors of the various counties of the state, to furnish, upon the written request of the com-

missioner, all the information in their power necessary to assist in carrying out the objects of this act; and all printing required by the bureau in the discharge of its duty shall be performed by the state printing department, and at least three thousand (3000) copies of the printed report shall be furnished the commissioner for free distribution to the public.

At no time during its existence has the Bureau been able to comply in all details with the provisions of the law creating it. A much larger staff of assistants would be needed by the Commissioner than he ever had in order to "collect, assort and systematize" all the information enumerated in the law.

From time to time it becomes necessary for the Bureau to make special investigations of labor conditions to enable it to meet requests for information on important labor subjects. During recent years the Bureau made special inquiries into the following matters:

1. The abuses of spurious trade-schools.
2. The extent of child labor in agricultural pursuits in California.
3. The financial operations of private employment agencies.
4. Prison-made goods in California.
5. Conditions of employment, wages, earnings, and hours of labor in the motion picture industry.
6. The hiring of Alaska cannery hands, and
7. The Mexican labor situation in the Imperial Valley.

The exceptional increase in the total number of complaints handled by the Bureau consumed all of its financial resources; so that sufficient funds were not available for special inquiries into matters of this kind, and these subjects were not thoroughly investigated. However, the information obtained proved of value to the Bureau in its work of administering and enforcing the labor laws of the state. In the immediate future it will be necessary for the Bureau of Labor Statistics to investigate the following subjects:

1. The splitting of fees between employment agencies and superintendents or foremen on construction jobs and in other places of employment.

2. Occupational diseases and working conditions of employees in cement plants.

3. The desirability of extending the eight-hour law for women to apply to manual workers in institutions.

In addition to making investigations of special subjects, as occasion requires, the Bureau of Labor Statistics should also be in a position to undertake, regularly, studies of conditions of employment, wages, earnings, and hours of labor in the various industries of our state. If these objects of the Bureau are to be carried out, it would be highly desirable that the funds appropriated for the statistical, research, investigative and informative activities of the Bureau should be budgeted separately. Heretofore, the appropriations for this service of the Bureau have been budgeted together with the moneys appropriated for law administration and enforcement.

WALTER G. MATHEWSON,
Commissioner of Labor.

SUMMARY OF FACTS.

The following is a brief summary of the work of the Bureau of Labor Statistics relating to the administration and enforcement of labor laws during the two fiscal years covered by this report. Only the major facts presented in this report are included in this summary:

Labor Law Violations.

1. During the two fiscal years covered by this report the Bureau received, and investigated, 47,068 complaints against persons for alleged violations of labor laws. During the preceding biennial period, the number of such complaints was 33,801. This represents an increase of 13,267, or 39.3 per cent over the number of complaints investigated during the preceding biennial fiscal period (Table 2, Chart 4).

2. Out of every hundred complaints investigated by the Bureau, about eighty-eight are complaints against persons failing to pay wages as required by law.

3. The per cent of increase in the total number of wage complaints handled by the Bureau during the two fiscal years ended June 30, 1926, was 40.8; while the per cent of increase in the number of all other complaints handled by the Bureau during these two fiscal years was 28.9 (Table 4).

4. The number of complaints against violations of the private employment agency act was 2008 during the fiscal period covered by this report, an increase of 1.3 per cent over the preceding fiscal period (Table 6, Chart 7).

5. The number of complaints against violations of the eight-hour law for women handled by the Bureau during the latest biennial period was 1343, compared with 1147 during the preceding biennial fiscal period. This represents an increase of 196, or 17.1 per cent over the preceding biennial fiscal period (Table 9, Chart 8).

6. The number of child labor law complaints handled by the Bureau during the two biennial fiscal years covered by this report was 869, which was 538, or 162.5 per cent more than in the two preceding fiscal years (Table 11, Chart 8).

Collection of Unpaid Wages.

1. During the two fiscal years covered by this report, the Bureau collected in unpaid wages the sum of \$1,468,551, compared with \$858,164 collected during the preceding biennial period. This represents an increase of 71.1 per cent (Table 12, Chart 10).

2. For every single dollar in unpaid wages which the Bureau collected in the fiscal year 1921 (the present Commissioner of Labor went into

office in 1922; so that 1921 is the nearest year preceding his incumbency), the Bureau collected:

\$1 03	in the fiscal year 1922
1 60	in the fiscal year 1923
2 28	in the fiscal year 1924
2 70	in the fiscal year 1925
3 93	in the fiscal year 1926

3. The increased collections of unpaid wages are explained by the opening of new district offices and better enforcement of our wage laws.

4. The average annual savings to the workers of the state in legal fees, as a result of the Bureau's collections of unpaid wages has been from \$183,600 to \$244,700.

Criminal Prosecutions.

During the two fiscal years ended June 30, 1926, the Bureau started 1090 criminal prosecutions against violators of the state labor laws. In the preceding biennial period the number of such prosecutions were only 294. The increase in the latter period was therefore 271 per cent (Table 22).

The State Free Employment Bureaus.

During the period covered by this report, the state free employment bureaus filled 341,583 jobs without charge to the applicants for employment. This, it is estimated in this report, represents a saving to the workers of the state, in employment agency fees, of about \$209,000 annually.

CRIMINAL ACTIONS AGAINST VIOLATORS
OF LABOR LAWS PROSECUTED BY THE
BUREAU: 1921-1926.

NEW LABOR LEGISLATION.

The following labor laws were passed by the forty-sixth session of our legislature and were approved by Governor Friend Wm. Richardson. These amendments to our statutes were recommended by the Bureau.

The Semimonthly Pay Day Bill.

Assembly Bill No. 742 (Stats. 1925, Ch. 76), introduced by Messrs. Levy and Hawes, strengthened the semimonthly pay day act by providing for an additional civil penalty of \$10 for each employee who is not paid in accordance with section 2 of the state wage law. This section makes it obligatory upon employers to pay wages to all employees regularly, twice a month, but it exempts persons engaged in domestic service, and in agricultural, horticultural, and viticultural work, who may be paid once in each calendar month if lodged and boarded by their employers. This bill made no radical change in the law itself, but added a civil penalty to the criminal penalty which has been in existence since 1915. The bill was modeled on the New York law which provides for a penalty of \$50 for each failure to pay each employee. The New York law was upheld as constitutional by the United States Supreme Court in an unanimous decision in 1914, in the case of *Erie R. R. Co. vs. Williams*, 233 U. S. 685.

Child Labor in Theatrical Employment.

Senate Bill No. 471 (Stats. 1925, Ch. 141), introduced by Senator Sanborn Young, provides that no children under the age of twelve years can perform in any theatrical concert or vaudeville entertainment except in the public school vacation, when children over the age of eight years may perform, if the written consent of the Labor Commissioner had been obtained. This amendment to section 5 of the Child Labor Law was designed to curb the exploitation of children on the stage.

Strengthening the Child Labor Law.

Senate Bill No. 470 (Stats. 1925, Ch. 123), introduced by Senator Young, was enacted into law to facilitate the enforcement of the child labor laws of our state. This change in the law provides that proof that any defendant was the manager or superintendent of any place of employment in which a minor was found to have been employed in violation of the law, shall be prima facie evidence that the defendant employed "and suffered and permitted" the minor to work. It further provides that the sworn statement of the Commissioner of Labor, or his deputies, as to the age of any child affected by the act shall be prima facie evidence of the age of such child.

The Bureau of Labor Statistics.

Senate Bill No. 485 (Stats. 1925, Ch. 282), introduced by Senator Hurley, raised the Bureau of Labor Statistics on a higher plane as regards salaries. This measure increased the salary of the Labor Commissioner from \$4,000 to \$5,000 per year. It also abolished certain statutory positions and placed all employees and expenditures

of the bureau under the rule of the Civil Service Commission and the Board of Control.

Labor and Material Bond on Public Works.

Assembly Bill No. 895 (Stats. 1925, Ch. 321), introduced by Assemblyman M. J. McDonough, now makes it possible for a laborer or materialman to sue the bonding company immediately upon the default of a contractor or subcontractor doing work upon public improvements. Prior to the enactment of this measure laborers were compelled to wait until the completion of the job and 30 days thereafter in order to sue the bonding company for their wages. Since this law became effective, the bureau has been able to secure rapid adjustments of wage claims from companies who had bonded defaulted contractors.

The Nine-Hour Law for Drug Clerks.

Assembly Bill No. 387 (Stats. 1925, Ch. 394), introduced by Assemblyman Frank Mixer, now provides that: "No person employed by any person, firm or corporation to sell, at retail, drugs and medicines, or to compound physicians' prescriptions, shall perform *any* work in any store, dispensary, pharmacy, laboratory or office for more than an average of nine hours per day or for more than one hundred eight hours in any two consecutive weeks nor more than thirteen days in such two consecutive weeks."

Workers' Tools Protected.

Assembly Bill No. 718 (Stats. 1925, Ch. 311), introduced by Percy G. West. Under this new law, persons dealing in second-hand goods can buy or receive as a pledge any builder's tools only on the condition that the person selling or pledging such tools leave with the dealer a bill of sale for such goods. The dealer must also keep a register of any tools pledged and file copies of all such bills of sale with the chief of police or town marshal.

Other Labor Bills Not Drafted by the Bureau.

The preceding measures were drafted by the Bureau and their passage was urged in the interests of better labor law enforcement as well as in the interests of greater protection to the workers. The following labor bills, not drafted by the Bureau, were also enacted into law.

1. Senate Bill No. 516, (Stats. 1925, Ch. 354), introduced by Senator Hurley, increased the allowance for funeral benefits from \$100 to \$150.

2. Senate Bill No. 519 (Stats. 1925, Ch. 355), also introduced by Senator Hurley, provides that a claim for compensation for the injury or death of an employee, or an award or judgment entered thereon shall have preference over all other debts of the employer or his estate or of the insurance company.

3. Assembly Bill No. 155 (Stats. 1925, Ch. 383), introduced by Assemblyman Herbert McDowell, strengthens the provisions of section 46½ of the Workmen's Compensation Act relating to unsafe places of employment and unsafe equipment, by making it a misdemeanor

offense to fail to comply with the regulations of the Industrial Accident Commission.

4. Assembly Bill No. 205 (Stats. 1925, Ch. 300), introduced by Assemblyman Ray Williamson, makes it a misdemeanor offense for an employer who is subject to the provisions of the Workmen's Compensation Act to fail to take out compensation insurance covering his workers.

5. Assembly Bill No. 65 (Stats. 1925, Ch. 296), introduced by Assemblyman Frank L. Ecksward of San Mateo, amends section 7 of the act accepting the benefits of the vocational rehabilitation act of congress by appropriating the sum of \$35,000 for each fiscal year to be used by the State Board of Education in rehabilitating workmen who are injured in industrial accidents.

RECOMMENDATIONS.

The following recommendations relating to needed changes in our labor laws are offered with the hope that they will receive favorable consideration at the hands of the legislature. Our experience with the administration and enforcement of the labor laws of the State of California prompt the recommendations herewith submitted. The enactment of these amendments will undoubtedly prove of value in the enforcement of our labor statutes.

The Eight-Hour Law for Women.

1. The eight-hour law for female employees (Stats. 1919, Ch. 248) should be so amended as to make it obligatory upon employers to keep adequate records of the number of hours worked by female employees. In this law it should be made mandatory upon employers to produce these records to agents, deputies, or representatives of the Bureau of Labor Statistics, upon demand. Failure to keep or to produce such records should be made a misdemeanor, punishable for each offense.

The passage of this amendment to the law will remedy the present difficulties often experienced by deputies of the Bureau when they are endeavoring to ascertain the number of hours worked in certain establishments where overtime is reported to have been worked in violation of the law.

2. The eight-hour law should also be amended so as to extend its benefits to women engaged in manual work in state, county, city, and private institutions.

3. This law should be further amended to make its provisions relative to home work more enforceable.

4. Still another amendment to the eight-hour law for women is needed which would extend its benefits to such clerical and similar occupations as are not now covered by the act.

Hours of Labor in Underground Workings.

The eight-hour law for men in underground workings and in smelters (Stats. 1913, Ch. 186) ought to be amended to include men working in cement plants. The work in these plants is especially hard and hazardous to the health, life, and limb of the workers.

The Private Employment Agency Act.

1. The employment agency act (Stats. 1912, Ch. 302) should be amended in these particulars:

(a) Section 4 should be changed to prohibit explicitly the operation of an employment agency in connection with pool rooms or soft drink parlors. These establishments too often favor applicants for employment who spend the most money playing pool or buying soft drinks.

(b) It should be expressly provided in the law that all employment agents, or their assignees, licensed by the Labor Commissioner, must make reports to the Commissioner on any and all court actions brought against persons to whom jobs were furnished for the collection of fees; such reports to be made at the time such actions are filed.

(c) The act should also be amended so as to provide not only for the revocation of licenses by the Commissioner, but also for the sus-

pension of same for a period to be determined by the Commissioner of Labor.

(d) Section 7 of this act should be changed in order to provide for a better classification of cities. The license fees should be based upon the United States census of population rather than upon the classification of cities provided in the present law.

(e) It should be made a misdemeanor for an employment agent to accept more than one deposit for the same position to which one or more applicants are sent to be interviewed.

The Trade School Act.

This act should be amended to prevent the misrepresentation of employment conditions to prospective students enrolling in trade school courses.

Advertising During Strikes Act.

This act (Stats. 1913, p. 678) should be amended to include the word *circulated* after the word *published* in section 1. It should also be amended to provide that all advertisements for help during strikes should include the name of the person, firm or corporation placing the advertisement and the appearance of this name in connection with the advertisement should be considered as prima facie evidence as to the person, or persons, responsible for the advertisement.

The Misrepresentation of Conditions of Employment Act.

This act (Stats. 1923, p. 514) should be amended in two particulars. The penalty should be reduced from \$2,000 or 1 year imprisonment to \$500 or 6 months imprisonment. This change in the law would make it possible to try such cases in the police and municipal courts, whereas at the present time these cases must be tried in superior courts, which, owing to the congestion in the courts' calendars, often causes delay.

This law should be further amended to provide a civil penalty to cover the cost of transportation and expenses incurred by the plaintiff to whom conditions of employment had been misrepresented.

The Semimonthly Pay Day Law.

Proper legislation should be enacted to extend the benefits of the semimonthly pay day law to employees of the state, counties, or cities. There are many good reasons why employees of the state, counties, or cities should receive their salaries semimonthly. The wages and salaries of many of such employees do not exceed those paid in private employments, where wages must be paid twice during each calendar month.

Obtaining Labor Under False Pretenses.

Section 532 of the Penal Code which prohibits the obtaining of labor under false pretenses needs further clarification and the penalty sections should be made more explicit. At the present time an employer may hire workers when still owing wages to workers whom he had discharged or who had quit. The failure to pay workers hired under such circumstances should be made prima facie evidence of obtaining labor under false pretenses.

Farm Laborer's Lien.

There exists urgent need for the extension of our lien laws to include additional subjects. Our present mechanics' lien laws are practically of no value to farm labor. Article XX of our Constitution reads as follows:

Article XX. section 15.—Mechanic's lien. Mechanics, materialmen, artisans, and laborers of every class, shall have a lien upon the property upon which they have bestowed labor or furnished material for the value of such labor done and material furnished: and the legislature shall provide, by law, for the speedy and efficient enforcement of such liens.

It will be noticed that the article just quoted reads that the legislature *shall provide*, by law, liens for *every class* of labor. In spite of this, we have heretofore failed to protect farm labor, which is perhaps the largest class of labor in California.

Loggers' Lien.

In addition to giving farm labor a lien on crops, the loggers' lien law should be clarified so as to make its enforcement more feasible.

The Small Claims Court.

The question has arisen as to whether or not the Municipal Court Act, adopted at the last session of the legislature had the effect of abolishing the small claims court in the cities adopting the municipal court system. So far the cities of Los Angeles and Long Beach have adopted the municipal court system by vote of the people. Small claims courts have ceased to exist in these two cities as a result of an opinion of the county counsel of Los Angeles County to the effect that the Municipal Court Act makes no provision for the small claims court. The Attorney General has recently ruled in an opinion rendered to the Commissioner of Labor that the small claims court has not been abolished in these two cities and the matter is now pending before the State Supreme Court on an application for a writ of mandamus to compel the municipal court judges to take small claims court cases for \$50 or less, free of charge. Unless this writ is granted, the legislature should enact the proper legislation to reestablish the small claims courts in these two cities and to provide for the continuation of these courts in any other cities that may adopt the municipal court system. This is exceedingly important as hundreds of workers are dependent upon this court for the adjustment of wage disputes which the Bureau of Labor Statistics is unable to adjust without exceeding its authority.

The Bond Law.

The act requiring employers to pay the cost of bonds and photographs required of applicants for employment (Stats. 1917, p. 151) should be amended to make its intent clearer. The Bureau has often encountered difficulties in the interpretation of this act in cases of criminal prosecutions for its violation.

Amendments to the Code of Civil Procedure.

1. Section 690 of the Code of Civil Procedure to be amended so as to give wage claimants the privilege of levying execution on one-half of the wages due a judgment debtor.

2. Section 689 of the Code of Civil Procedure to be amended so as to provide for a trial within 10 days as to the ownership of property whenever a third party claim is filed under an attachment.

Seasonal Free Employment Bureaus.

The seasonal free employment bureaus which the Bureau established in Brawley, Hollister, Chico, Lodi, Marysville, and Modesto have proved of great value to those communities. Provision should be made in the regular biennial appropriations of the Bureau for the maintenance of these offices during the summer months of each year when the demand for farm and other labor is greatest.

COMPLAINTS AGAINST LABOR LAW VIOLATIONS.

All labor laws, the enforcement of which are not specifically vested in other officers, boards, or commissions, must be enforced by the Commissioner of the Bureau of Labor Statistics. The act "to provide for enforcement of labor laws of the State of California by the commissioner of the bureau of labor statistics" (approved May 24, 1915, Stats. 1915, p. 814, Ch. 484), reads as follows:

The commissioner of the bureau of labor statistics shall have authority and power to enforce any and all labor laws of the State of California, the enforcement of which is not specifically vested in any other officer, board or commission, and the deputies and agents of the said labor commissioner shall have the power and authority of sheriffs and other peace officers to make arrests, and to serve any process or notice throughout the state in the enforcement of such labor laws, pursuant to the instructions of said commissioner.

The following labor laws, as will be seen in subsequent sections of this report, require most frequently the exercise of the Bureau's power of enforcement.

1. The laws relating to payment of wages.
 - (a) The payment of wages law.
 - (b) The semimonthly pay day law.
 - (c) The pay check law.
2. The law relating to the regulation of private employment agencies.
3. The eight-hour law for women.
4. The child labor law.
5. The law relating to sanitation and ventilation of workshops and in factories.
6. The eight-hour law on public works and underground work.

In addition to the laws just enumerated, many other miscellaneous labor laws often require the exercise of the Bureau's enforcement power.

That the total number of complaints against alleged violations of the labor laws received at the several district offices of the Bureau has been increasing each year since 1920 will be seen from Table 1 and Chart 3.

An examination of Table 1 shows that from 9198 complaints received in the fiscal year 1920, the number of complaints has grown to 28,157 in 1926. With the exception of the four fiscal years 1917 to 1920, there has been a gradual, though not steady, increase in the number of complaints handled by the agents and deputies of the Bureau.

It will be observed (Table 1) that in the fiscal year 1925 there was an increase of 1890, or 11.1 per cent, over the number of complaints received in the fiscal year 1924; while during the fiscal year 1926, the total number of complaints was by 9246 or 48.9 per cent greater than in 1925.

1926.....	28,157	9,246	48.9	568

The next table (Table 2) shows the total number of complaints investigated by the Bureau since 1913, by biennial fiscal periods. This table shows that during the latest biennial period of 1925-1926, the total number of complaints received and investigated was 47,068 as compared with 33,801 complaints received during the preceding biennial period of 1923-1924. This represents an increase of 13,267 complaints, or 39.3 per cent, over the preceding biennial fiscal period.

The increase in the volume of complaints received at the several district offices of the Bureau during the two fiscal years of 1925-1926 is shown graphically in Chart 4, which follows Table 2.

TABLE 2—Total Number of Complaints Against Alleged Violations of Labor Laws Filed With, and Investigated by the Bureau 1913-1926, by Biennial Periods.

Both fiscal years	Total number of Complaints	Increase or decrease (—) over preceding biennial periods	
		Number	Per cent
1913-1914.....	14,578

1925-1926.....	47,068	13,267	39.3

Distribution of Complaints.

In the preceding tables were shown the total number of complaints received against alleged violations of all labor laws. Table 3 and Chart 5, following, show the numerical and percentage distribution of the various complaints investigated by the several district offices of the Bureau.

An examination of Table 3 shows that 88.2 per cent of all complaints were against persons for violation of the nonpayment of wage laws. In the preceding biennial period the corresponding percentage was

CHART 5.

87.2. The next largest number of complaints, 4.3 per cent, was against private employment agencies. Complaints relating to the eight-hour law for women, the child labor law, the laws pertaining to sanitation and ventilation, and the eight-hour law on public works and underground works, were in order named, the more numerous during the two fiscal years covered by this report.

*Less than one-tenth of one per cent.

The number and proportion which the wage complaints and all other complaints were of the total complaints received by the several district offices of the Bureau from 1913 to 1926 are shown in Table 4 and Chart 6. It will be noticed that during the latest two fiscal years, as well as in most of the years since 1913, the wage complaints constituted over four-fifths of the total complaints filed at the Bureau.

In the fiscal year 1926, it will be observed, wage complaints were 88.9 per cent of the total complaints, whereas, in the preceding fiscal year, wage complaints constituted 87.1 per cent of the total complaints. The larger proportion of wage complaints in the fiscal year 1925-1926 is explained in a measure by the opening of new district offices in Long Beach, Santa Barbara, and San Bernardino.

Further examination of Table 4 shows that during the latest biennial period wage complaints increased by 12,021, or 40.8 per cent, while all other complaints increased 1,246 or 28.9 per cent.

COMPLAINTS AGAINST PRIVATE EMPLOYMENT AGENCIES.

The subject of fees charged by private employment agencies as well as matters pertaining to the regulation of these agencies by the Bureau are described in a subsequent section of this report. In Tables 5 and 6, and in Chart 7, following, are shown in detail the number of complaints against private employment agencies which the several district offices of the Bureau investigated and adjusted each fiscal year from 1913 to 1926, inclusive.

The complaints referred to in these tables include all complaints involving alleged violations of the private employment agency act, such as operating without licenses, refusal to make refunds as required by law, failure properly to describe the jobs to which applicants are sent, and operating employment agencies under our trade school act.

It will be seen by examining Tables 5 and 6 that the number of complaints in 1925 slightly exceeded those in 1924; while the number of complaints involving the private employment agency act in 1926 exceeded the number in 1925 by 70, or 7.2 per cent.

A perusal of the tables and chart relating to complaints against employment agencies shows that there is no regularity in the number of complaints handled each year. This is explained by the fact that the enforcement of labor laws, like the enforcement of most laws, is often accomplished by "drives" and "campaigns." Thus, during the fiscal year 1926, the Bureau made a special attempt, or "drive" to apprehend violators of the trade school act under which trade schools promising employment to enrolling students are considered employment agencies and must secure employment agency licenses from the Labor Commissioner.

Misrepresentations of Working Conditions by Employment Agencies and Revocation of Licenses.

Flagrant violations of the provisions of the private employment agency act result in revocation of licenses of the offending employment agents. Licenses, however, are not revoked before the employment agent against whom the complaint is filed is given due notice of the complaint filed against him and is given ample opportunity to defend himself at a hearing before the Labor Commissioner, or his deputies. In many cases, after such hearings, the employment agent is ordered to pay all the damages that accrued to the applicants for employment who filed the charges and he is allowed to hold his license subject to his strict compliance with the employment agency act. The following case is cited as an example of the kinds of complaints which come before the Bureau for adjudication. It is the case of *A. P. Lopez vs. Ricardo Rodriguez*, Los Angeles Complaint No. 52,225. This complaint was filed in our Los Angeles district office on October 30, 1925, and is described in the following record taken from our files in Los Angeles:

The defendant, R. Rodriguez, operates an employment agency at 426 N. Main St., Los Angeles. On September 28, 1925, A. P. Lopez, R. Moreno and three other Mexican laborers were sent by the agency to work at the Natural Soda Products Company near Keeler, California, a distance of about 275 miles from Los Angeles. Lopez and Moreno appeared at our bureau on October 30th and complained that conditions at the plant were misrepresented to them by the employment agency.

The hearing upon the complaint was set for November 4, 1925. The defendant appeared personally and was represented by the firm of Fredericks & Hanna, Senator Charles Lyon and A. W. Marshall. The State Commission of Immigration and Housing, which also took an interest in this case, was represented by Mrs. Adele S. Calhoun. The office of the Mexican Consul was also represented. Several employment agencies who became interested or involved in the proceedings were represented by Mr. Raymond Shively, manager of the California Employment Board. Mr. Philip Playter represented Hummel Brothers, and Henry Watson represented the International Labor Agency. At the hearing were present about thirty Mexican laborers who claimed to have had similar experiences as the complainants in this case. Several officials from the Keeler plant and the district attorney of Inyo County were also present at the hearings.

The Natural Soda Products Company maintains a plant near Keeler, Inyo County, California, where soda is extracted from the bottom of a dried up lake, is carried away from the lake in small cars, and after certain preparations is shipped to various points throughout the country. The surface of the lake is covered with a

salty crust, which is removed, leaving a substance of soda. In digging and loading this substance men are required to stand in water four to eight inches deep, which seeps in as the substance is being removed. Upon arriving at Keeler the company furnishes the men with rubber boots, and each man has the choice of selecting a pair best fitted to his needs.

For several years last past it was the custom of the company to secure help to do this work from Los Angeles employment agencies. Within the last two years they entrusted the hiring of the men to one Wallace M. Thompson. Mr. Thompson is in the business of transporting men from Los Angeles to various parts of the state for compensation, maintaining an office with Hummel Brothers employment agency in the city of Los Angeles. He received \$13 per man for transporting them from Los Angeles to Keeler, and paid out money for the passengers to supply them with meals, lodging and blankets in the event they had no money to pay for same. Under arrangements with defendant Rodriguez he paid the fee of \$1 or more for each man, to Rodriguez, at the time of hiring, as the laborers were unable to do so. Upon landing his passengers at Keeler, Thompson would secure an adjustment of his account from the company for all moneys he had advanced. The company deducted the amount thus paid to Thompson out of the first wages due the employees, and if the employees did not earn enough money to defray these expenses the company would stand half the loss and charge the other half to Thompson. Under this arrangement, and within the last four months, Thompson transported from Los Angeles to Keeler about 125 men. There were employed at the plant, from time to time, 100 to 275 men.

Lopez and his associates testified that at the time they were engaged for this work they were told by Rodriguez in the Mexican language that the place was a soda water factory and that they could drink all the soda water they wanted to; that they would receive 30 cents per hour for the work, and that the work would be nine hours per day, and if they chose to work longer they could work as much as twelve hours a day. The five men left in Thompson's car and arrived at Keeler within the next twenty-four hours, having spent the night at Cowan's Station en route.

On arrival at Keeler they were first met by a number of other Mexicans who told them they would be compelled to work twelve hours a day. They were then received by Labor Foreman Roberts, who informed them that there were no nine-hour jobs open, and that the only jobs on which they could work would be a twelve-hour job in the lagoon loading soda into carts. The laborers were assigned to their quarters provided for them, in bunks around the plant. The beds consisted of iron cots with mattresses thereon, and the mattresses were never changed but were used until useless. The men would sleep on these cots, and after leaving, other men would take their places and sleep on the same cots without any changes being provided, and it is admitted that there was a possibility of contracting contagious diseases. No sheets whatever were provided, the covering being the blankets which the men brought with them or which they secured from Mr. Thompson.

The five men went to work at the place assigned to them, and after working seven hours returned to the plant, and being dissatisfied with the work, decided to quit and started to walk back to Los Angeles, without asking for their pay and without giving any notice to anyone. They walked a distance of from 16 to 18 miles, when they went to sleep under some bridge which offered them shelter for the night. The following day, and before they were ready to leave this place, they were overtaken by Gen. Supt. Miller, who was in charge of the company's plant, and who was also a deputy sheriff of Inyo County, and were informed they were under arrest for beating their board bill. They were taken back to the plant at Keeler and placed in restraint in one of the rooms, while Supt. and Deputy Sheriff Miller endeavored to get in touch by telephone with the office of District Attorney Jesse Hussian of Inyo County, and with the sheriff of Inyo County. Miller stated that he was unable to reach the sheriff or the district attorney, both being absent from their offices on official business. The men were therefore kept in confinement in the plant until the following day, being required to spend the night in a room in which the company kept automobile parts. The company provided them with empty gunny sacks on which they were obliged to sleep. On the following day they were taken to Independence, where a complaint was lodged against them by Miller, charging each of them with beating their board bill in the amount of 70 cents, covering two meals. (Sec. 537 of the Penal Code, providing for defrauding inns, lodging houses, boarding houses, etc.)

The district attorney of Inyo County having recommended the issuance of the warrant, prosecuted the case. Judge King, before whom the case was tried, called in, at the suggestion of the district attorney, the presiding judge of the superior court of Inyo County to assist the trial judge in determining the case. The men were told that they could have counsel if they had money to pay for his services. They did not have any money and so stated to the court. It appears that on recommendation of the district attorney the company wired to Rodriguez to appear as a witness against the men, and Rodriguez did appear and testified against them. Four of the men were found guilty and sentenced to 25 days in jail or to pay a fine of \$25. Not having the money to pay the fine, four were put in jail and served their respective sentences. One man, J. Valdez, who was brought back with the other four to the plant at Keeler, paid his board when told that he would be put in jail unless he paid the board bill and transportation, and having enough money to pay the same, was released by Miller and not taken to Independence and prosecuted. After the four convicted men had served their sentences they proceeded on foot to Los Angeles. Lopez and Moreno walked together, and not having enough money to pay for their meals, Lopez sold his shirt and safety razor, these being all of his possessions convertible into money, for \$2.50, which enabled them to keep alive until their arrival in Los Angeles. The other two men arrived at Los Angeles on their return trip on November 7, 1925, at 10 a.m. Moreno appeared in a weakened condition at the time he reported to this office, and complained of a fever. Lopez and Moreno were sent to this office by Murphy & Cohn, attorneys, who interested themselves in the cause after hearing their statements, without expecting to be compensated for their services.

Under the law of this state, an employment agency must furnish to every applicant for employment information as to the character of the work and the conditions relating thereto. A receipt with this information must be given to the applicant and becomes his property. A general statement that the working conditions are good is not sufficient. An employer has the right to maintain or operate his working plant at a place most suitable to his business. It may be in a desert, on the sea, or underground. It may be dangerous or subject to great hardships or restrictions. If, on being properly advised as to the nature thereof, the applicant chooses to go there and work, he has no cause to complain relative thereto. If, however, the existing conditions are misrepresented, concealed or incorrectly disclosed, the applicant has the right to decline to accept the position and refuse to work. In such case the agency may be required to reimburse the applicant for any damages he may have sustained by reason of being sent to the place. In some cases the license may be revoked, and prosecution may follow.

As stated, this company employed a large number of men at its plant in the desert near Keeler. The work was of general character and required no skill. The salty air and dust in the hot season would sometimes produce or cause a skin infection. One witness who had returned from the plant just before the hearing exhibited the effect of such disease, and appeared a fit subject for immediate hospital treatment. The men were obliged to stand four to eight inches in salty water, and in old or sometimes defective rubber boots, for twelve hours daily. These facts made it difficult for the company to retain its help and in a great measure accounts for the large turnover of its laborers.

It was admitted at the hearings that the company had a contract with Mr. Thompson under which they were to advance money for the transportation and expenses, and in some cases the employment fees. Thompson would hand in his bills for the money thus laid out and would receive his check on arriving with the load at Keeler. By virtue of the same agreement the company furnished free lodging to the men at its plant, but it charged \$1 per day for board. The expenses thus advanced and money due for board were to be deducted from the first pay. If the men quit or were discharged before they earned enough money to reimburse the company, Thompson would stand one-half of the loss and the company the other half. The men sent out were chiefly poor Mexicans without money, who were unable to pay for anything until they earned the money.

It is further admitted that on several occasions the men on arriving there refused to work or to continue working, before they had enough money to pay their bills, and that on several occasions some of them attempted to leave at night without giving any notice to anyone. On several of these occasions they were arrested for "beating their board bill" and being unable to pay the fine, they were imprisoned and served their sentences. In each of these cases the agents of the company signed the complaints with the approval of the district attorney of Inyo County, who personally prosecuted the cases.

Mr. Thompson testified that he informed Rodriguez of these prosecutions and of the fact that the men had to stand in water in doing the work. The defendant testified on his own behalf and claimed that he never had been in Keeler and had no knowledge of the conditions except as told by Thompson. He went to Independence to testify against Lopez and his companions because Thompson wired him that the district attorney requested his presence in court.

The men claimed that their receipts were taken away from them on arriving at Keeler, by Thompson's chauffeur. They had signed also a memo which was typewritten in the Spanish language.

During the hearings which lasted three days, the deputies who heard this case were mindful of the fact that neither the company nor the trial court which convicted the men, were on trial or subject to our investigation. This contention we found to be correct, and while the evidence assumed wide proportions we have limited the scope of the investigation of the charges against the employment agency. The propriety or regularity of the proceedings of any judicial tribunal and its decisions were not questioned at these hearings. The approval of the proceedings by the district attorney of Inyo County justified their filing of the complaint, and if he found that a law had been violated in his county it was his duty to prosecute the persons charged with the offense. If the trial judge found the evidence before him sufficient to warrant conviction, the correctness of his decision can be questioned only by appeal from his decision.

Judges may differ as to the sufficiency of evidence in a given case, as well as to the interpretation or construction of the law applicable to that case. It is, however, *now* a matter of record that in Inyo County men who failed to pay their board bills under circumstances, as related herein, have been prosecuted and put in jail on the complaint of the representatives of the company.

This fact is mentioned in connection with this record because it disclosed an unusual condition of affairs to exist at this company's plant. Men were sent there penniless and upon the distinct understanding that the meals which the company agreed to furnish will not have to be paid until they have earned enough money to pay for same. Yet without paying the men the wages they had earned, complaints were sworn out for their arrest, and they were convicted for failing to pay for their meals. The right of any of the men to quit at any time can not be questioned. Finding themselves without funds, and in the desert, they were thrust into jail for failing to do a thing which the company made impossible for them to do by not giving them the wages they had earned up to the time of quitting. The only other alternative required them to return to work. These conditions were nothing short of involuntary servitude and peonage.

The wisdom of our legislature in enacting the law which required an employment agency to specify the working conditions of a place to which men are sent, is clearly discernible. It was the duty of the defendant to ascertain these conditions and acquaint all applicants therewith. If they still desired to go to Keeler it was then their privilege to do so. The mere statement to the men would not be a full compliance with the law. Such information must be in writing and in the contract of employment. The receipt should have contained the additional information that the men would have to work not less than twelve hours daily; that they would have to use rubber boots to stand in water while working, and that if they did not pay their board bill in the event they quit before *pay day* they would be put in jail.

The misrepresentation as to the hours which the men had to work and the failure to specify the other conditions, justified the men either to quit or to refuse to accept the employment, and subjected the defendant to serious consequences.

The transportation from Keeler to Los Angeles is \$6. The men were subjected to privations and hardships by reason of the acts or omissions of acts by the defendant. The four men, Lopez, Esenbar, J. Rodriguez, and Moreno, who served their respective sentences shall be reimbursed by the defendant to the extent of loss of their earnings during the twenty-five days they spent in jail, and for the transportation and expenses of their return trip to Los Angeles, as follows:

Transportation from Keeler to Los Angeles at rate of \$6 each-----	\$24 00
Three days' time lost in jail awaiting trial, 9 hours at 30 cents per hour	32 40
Time lost in serving sentences, 25 days in jail-----	234 00
Time lost returning from Keeler to Los Angeles after serving jail sentences, 2 days at \$2.30 per day-----	18 40
Seven hours' work at plant at 30 cents per hour per man-----	8 40
Total-----	\$317 20

Valdez shall be reimbursed for the time he lost, and for the money he was obliged to pay out to keep out of jail, and expenses of his return trip, as shown in the following statement:

Money paid to Supt. Miller to avoid prosecution-----	\$16 50
Time lost due to arrest, 3 days at \$2.70 per day-----	8 10
Transportation from Keeler to Los Angeles-----	6 00
Seven hours' work at plant at 30 cents per hour-----	2 10
Total-----	\$32 70

The representatives of the company who attended the hearing stated that they were at all times desirous and anxious to remedy any existing evil which this or any other investigation may disclose, and that they are ready to cooperate with this department to that effect. This office is not unmindful of the fact that the enterprise conducted by the company adds to the industry of this state and should be encouraged. It will not be difficult for the company to rearrange their system so as to comply with our modern labor conditions, and when that is done they will have our best wishes for their success.

In the meantime we can not permit men to be sent to their plant by employment agencies, without their being told what they have to meet.

We take into consideration the good reputation of the defendant, which he has heretofore enjoyed in this community since 1919 when he established his present business, and find that if he will make a bona fide effort to reimburse these men, so far as they can be reimbursed, for the losses they have sustained, as indicated, and if he will henceforth comply with all requirements of the law, the ends of justice will be met—OTHERWISE HIS LICENSE IS TO BE REVOKED.

All employment agencies shall be notified that until further notice no men must be sent to the plant of the company unless the prevailing conditions in the plant, as described herein, are clearly and fully stated in writing in every contract of employment, and that a failure to comply with this requirement will subject them to a revocation of license.

While in the case just cited the employment agent was allowed to retain his license, after paying all damages he was ordered to pay to the Mexican laborers, in other cases, where the evidence is sufficient to justify it, the licenses are revoked. Between August, 1924, to September, 1925, the licenses of the following agencies were revoked:

1. The American Sunset Employment Agency, 768 Howard street, San Francisco.
2. A. B. C. Employment Agency, 623½ Pacific street, San Francisco.
3. Nora A. Judge Agency, 564 Market street, San Francisco.
4. The Motion Picture Players' Agency, 1614 Calhoun avenue, Los Angeles.
5. The Rapid Placement Bureau Agency, 201 Copp Building, Los Angeles.
6. The Tiffany Casting Service Agency, 303 Guaranty Building, Los Angeles.
7. The Acme Employment Agency, 801 Broadway, Fresno.
8. The American Sunset Employment Agency, 929 Second street, Sacramento.
9. The Cosmopolitan Employment Agency, 918 Second street, Sacramento.
10. The International Employment Agency, 215A L street, Sacramento.
11. The Pioneer Employment Agency, 202 K street, Sacramento.
12. The Independent Employment Agency, 1118 Second street, Sacramento.

13. The Independent Employment Agency, 19 W. Main street, Stockton.

Space will not permit to show in detail the reasons for the revocation of these licenses. Suffice it to say that all of these agencies had flagrantly violated one or more of the provisions of the employment agency act. Thus, for instance, the license of the A. B. C. Employment Agency was revoked for the following reasons:

First—The proprietor of the agency attempted to assign his agency to another person for \$500 without the Commissioner's consent.

Second—He changed the location of the agency without permission, contrary to section 6 of the private employment agency act.

Third—He accepted 42 registration fees from applicants, totaling \$188.50, in direct violation of section 12 of the act.

Fourth—He failed to give all applicants receipts for their fees, in violation of section 11 of the act.

COMPLAINTS AGAINST EIGHT-HOUR LAW VIOLATIONS.

During the biennial period of 1925-1926, the agents and deputies of the Bureau investigated 1,343 complaints against persons for alleged violations of eight-hour law for women workers. In the preceding biennial period, the number of complaints was 1,147, an increase, during 1925-1926 of 196 cases, or 17.1 per cent.

The number and percentage increases in these complaints from the fiscal year 1913 to 1926 are shown in Tables 7, 8, and 9, and in Chart 8.

The places of employment in which this law was alleged to have been most frequently violated are, in order named, as follows:

1. Restaurants.
2. Hotels, apartments, and boarding houses.
3. Laundries.
4. Retail stores.
5. Hospitals and sanitariums.
6. Candy and confectionary shops.
7. Manufacturing establishments (factories and shops).

TABLE 7—Total Number of Complaints Against Violations of the Eight-Hour Law for Women Filed With and Investigated by the Bureau During the Fiscal Years 1923, 1924, 1925 and 1926, by Industries.

COMPLAINTS AGAINST VIOLATIONS OF THE CHILD LABOR LAW.

It will be seen from Tables 10 and 11, and Chart 9, that in the biennial period covered by this report there has been a substantial increase in the number of complaints against violators of the child labor law. This is due primarily to the sustained efforts made during the last two years to stamp out the employment of children in the Imperial Valley, where children were found working in the fields during school hours. Owing to the arrests and convictions of many violators of the child labor law in the Imperial Valley, child labor in Imperial County has been practically stamped out. In its enforcement of the child labor law in the Imperial Valley, the Bureau had the whole-hearted and effective cooperation of the Superintendent of Schools of Imperial County.

The total number of child labor law complaints handled by the several district offices of the Bureau in 1925 and 1926 was 869, which was 538, or 162.5 per cent more than in the two fiscal years 1923 and 1924.

DIGEST OF THE CALIFORNIA CHILD LABOR LAWS.

The following is an annotated summary of the California child labor laws, including the compulsory education act and the part-time education law. The wording employed in this summary is not that used in the texts of the respective laws. Thus, for instance, section 1 of the child labor law does not read, "No minor under the age of 16 years shall be permitted to work." Instead, this section of the law enumerates certain occupations which do not specifically include agricultural occupations.

Section 1. No minor under the age of 16 years shall be permitted to work. (Sec. 1. Child Labor Law.)

Exceptions to section 1.

(A) As prescribed in the Educational Rights of Children Act, providing for permits to work to minors under 16 years of age and exempting them from *full-time* school attendance but not from *part-time* school attendance. (Sec. 1 (5) Ed. Rights of Children.)

PERMITS (1), (2) AND (3) ARE ISSUED BY THE SUPERINTENDENTS OF SCHOOLS OR BY PERSONS AUTHORIZED BY THEM IN WRITING. PRINCIPALS OF SCHOOLS OR CUSTODIANS OF SCHOOL RECORDS ISSUE PERMIT (4).*

(1) *Minors over 15 but under 16 years of age.*

- (a) Must have completed equivalent of seventh grade.
- (b) Must have promise of definite employment.
- (c) Must be physically fit to undertake work contemplated. (Sec. 3a (2) Ed. Rights of Children.)

(2) *Minors over 14 but under 16 years of age.*

- (a) Must hold diploma of graduation from eighth grade.
- (b) Must have promise of definite employment.
- (c) Must be physically fit to undertake the work contemplated.
- (d) Must be in extreme financial need. (Sec. 3a (2) Ed. Rights of Children.)

PERMITS (3) AND (4) DO NOT EXEMPT FROM FULL-TIME SCHOOL ATTENDANCE AND ARE ISSUED BY SAME AUTHORITIES.

(3) *Minors over 14 but under 16 years of age. To work out-of-school hours only.*

- (a) Must have promise of definite employment.
- (b) Must be physically fit to undertake the work contemplated. (See Sec. 3a, Third, Ed. Rights of Children.)

(4) *Minors over 12 but under 16 years of age. To work Saturdays and during the regular or a specified occasional public school vacation.* (See Sec. 3b, First, Ed. Rights of Children.)

PERMIT (5), WHICH IS THE THEATRICAL PERMIT, IS ISSUED ONLY BY THE LABOR COMMISSIONER, OR HIS AUTHORIZED DEPUTIES.

(5) *Any minor under 18 years of age.† To work as actor, actress, or to take part in any drama, play, performance, or entertainment.*

- (a) Must show satisfactory school attendance and scholarship.
- (b) Must file certificate of age.
- (c) Must satisfy the Labor Commissioner that the environment under which the work is to be performed on the stage is not detrimental to the minor's health or moral well-being. (Sec. 5 of Child Labor Law.)

Minors under 16 years may not work without proper permit.

Permits.

15 to 16 years. Age and schooling permit. Part-time school attendance required.

14 to 16 years. Graduate permit. Part-time school attendance required.

14 to 16 years. Age and schooling. Full-time school attendance required.

12 to 16 years. Age and schooling. Full-time school attendance required.

Theatrical permit. Full-time or part-time school attendance required.

* In addition to these permits, authorized school authorities may assign any minor over the age of 14 to a vocational course in a place of employment, such employment to be in lieu of the regular school course.

† Section 5 of the child labor law was amended in 1925 so as to prohibit the employment of children under 12 years of age in theatrical pursuits except during periods of public school vacations, when children 8 years of age or over may perform with the written consent of the Labor Commissioner.

Boys under 10
years and girls
under 18 years.
Prohibited
occupations.

6. *No boy under 10 years of age, nor girl under 18 years of age, shall be employed, permitted or suffered to work at any time in or in connection with the street occupation of peddling, bootblacking, the sale or distribution of newspapers, magazines, periodicals or circulars nor in any other occupation pursued in any street or public place; provided, however, that nothing in this section shall be construed to apply to cities whose population is less than twenty-three thousand according to the last federal census. (See Sec. 3½ of the Child Labor Law.)*

NOTE.—Under date of June 23, 1923, Attorney General U. S. Webb ruled that theaters and root beer stands are "public places" within the meaning of the law.

(7) *Minors of any age may be employed in agricultural, horticultural, or viticultural or domestic labor, when school is not in session, or outside of school hours, not more than eight hours in any one day or 48 hours in any one week. (Sec. 5 of Child Labor Law.)*

SEC. 2. NO MINOR UNDER THE AGE OF 18 YEARS SHALL BE EMPLOYED MORE THAN EIGHT HOURS IN ONE DAY, 48 HOURS IN ONE WEEK, OR BEFORE FIVE O'CLOCK A.M. OR AFTER TEN O'CLOCK P.M. (Sec. 2, Child Labor Law.)

Exceptions to Section 2.

(A) As prescribed in the Child Labor Law:

May work
after 10 p.m.

(1) *Minors between 15 and 18 years of age may secure permit from Labor Commissioner or his authorized deputies, to work on the stage after 10 o'clock p.m., if the performance began prior to that time. (Sec. 5 of Child Labor Law.)*

May work more
than 48 hours in
one week or 8
hours in one day.

(2) *Minors 16 years of age and over may be employed in agricultural, horticultural, or viticultural, or domestic labor for more than eight hours in one day or more than 48 hours in one week. (Sec. 5 of Child Labor Law.)*

(3) *No boy under 18 years of age shall be employed as messenger, as provided in section 3 below, before 6 o'clock in the morning or after the hour of 9 o'clock in the evening. (Sec. 3 of Child Labor Law.)*

16 to 18 years.
School enrollment
certificate and
permit to work.

NOTE.—Except in agricultural and homemaking occupations, the part-time educational law, under which the school enrollment certificate and permit to work are issued to minors between 16 and 18 years of age, furnishes no exception to section 2, since the four hours per week of part-time education must be included in the eight hours per day or forty-eight hours per week of work. (Sec. 7, Part-Time Education.)

Girl under 18,
boy under 16 years,
prohibited
employments.

SEC. 3. NO GIRL UNDER THE AGE OF 18 YEARS, NO BOY UNDER THE AGE OF 16 YEARS SHALL BE EMPLOYED AS MESSENGER FOR ANY TELEGRAPH, TELEPHONE, OR MESSENGER COMPANY, IN TOWNS OF MORE THAN 15,000 INHABITANTS NOR SHALL ANY BOY UNDER THE AGE OF 18 YEARS BE PERMITTED TO ENGAGE IN SUCH WORK BEFORE THE HOURS OF SIX IN THE MORNING OR AFTER THE HOUR OF NINE O'CLOCK IN THE EVENING. (Sec. 3, Child Labor Law.)

SEC. 3½. SAME AS EXCEPTION (6) UNDER SECTION 1 ABOVE. (Sec. 3½, Child Labor Law.)

SEC. 4. NO MINOR UNDER THE AGE OF 16 YEARS SHALL BE EMPLOYED IN DANGEROUS OCCUPATIONS SUCH AS: (Sec. 4, Child Labor Law.)

Minors under 16
years, prohibited
employments.

(1) Adjusting any belt to any machinery, or sewing or lacing machine belts in any workshop or factory, or oiling, wiping or cleaning machinery, or assisting therein, or operating or assisting in operating any of the following machines:

- (a) Circular or band saw; (b) wood shapers; (c) wood jointers; (d) planers; (e) sandpaper or wood-polishing machinery; (f) wood turning or boring machinery; (g) picker machines or machines used in picking wool, cotton, hair or any other material; (h) carding machines; (i) paper-lace machines; (j) leather burnishing machines;

(k) printing presses of all kinds; (l) boring or drill presses; (m) stamping machines used in sheet-metal and tinware or in paper and leather manufacturing, or in washer and nut factories; (n) metal or paper-cutting machines; (o) corner-staying machines in paper box factories; (p) corrugating rolls, such as are used in corrugated paper, roofing or washboard factories; (q) steam boilers; (r) dough brakes or cracker machinery of any description; (s) wire or iron straightening or drawing machinery; (t) rolling mill machinery; (u) power punches and shears; (v) washing, grinding or mixing machinery; (w) calendar rolls in paper and rubber manufacturing; (x) laundering machinery; or in proximity to any hazardous or unguarded belts, machinery or gearing; or

Minors under 16 years.

- (2) upon any railroad, whether steam or hydraulic; or
- (3) upon any vessel or boat engaged in navigation or commerce within the jurisdiction of this state; or
- (4) in, about, or in connection with any processes in which dangerous or poisonous acids are used; or
- (5) in the manufacture or packing of paints, colors, white or red lead; or
- (6) in soldering; or
- (7) in occupations causing dust in injurious quantities; or
- (8) in the manufacture or use of dangerous or poisonous dyes; or
- (9) in the manufacture or preparation of compositions with dangerous or poisonous gases; or
- (10) in the manufacture or use of compositions of lye in which the quantity thereof is injurious to health; or
- (11) on scaffolding; or
- (12) in heavy work in the building trades; or
- (13) in any tunnel or excavation; or
- (14) in, about or in connection with any mine, coal breaker, coke oven, or quarry; or
- (15) in assorting, manufacturing or packing tobacco; or
- (16) in operating any automobile, motor car or truck; or
- (17) in a bowling alley; or
- (18) in a pool or billiard room; or
- (19) in any other occupation dangerous to the life or limb, or injurious to the health or morals of such child; provided, however, that the provisions of this section shall not apply to the courses of training in vocational or manual training schools or in state institutions.

NOTE.—The Bureau of Labor Statistics may from time to time, after a hearing duly had, decide whether or not any particular occupation is dangerous to children under the age of 16 years.

Labor Commissioner to decide on dangerous employments.

SEC. 5. SAME AS EXCEPTIONS (1), (2), UNDER SECTION 2, AND (5) AND (7) UNDER SECTION 1 ABOVE. (Sec. 5, Child Labor Law.)

SEC. 6. EMPLOYER MUST KEEP SEPARATE REGISTER OF ALL MINORS EMPLOYED DIRECTLY OR INDIRECTLY. (Sec. 6, Child Labor Law.)

Employer must keep register of minors.

Within five days after the minor's employment terminates, the employer must notify the county supervisor of attendance of the termination of such employment. Minors under sixteen years of age must resume regular school attendance, after being out of employment for ten consecutive days.

Notification of termination of employment.

Permits to work are subject to cancellation by the Commissioner of the Bureau of Labor Statistics or by authority issuing the same whenever such Commissioner or such issuing authority determines that the conditions for the legal issuance of such certificate or permit no longer exist or have never existed.

Minors must resume regular school attendance after ten days of unemployment.

SEC. 7. PROVIDES PENALTY FOR VIOLATIONS OF THIS ACT OR FOR FAILURE TO COMPLY WITH PROVISIONS OF THIS ACT. (Sec. 7, Child Labor Law.)

Issuing authorities and Labor Commissioner may revoke permits to work.

Labor Commis-
sioner to enforce
child labor law.

SEC. 8. IT IS THE DUTY OF THE COMMISSIONER OF
LABOR TO ENFORCE THIS LAW. (Sec. 8, Child Labor Law.)

SEC. 9. INCONSISTENT ACTS AND PARTS OF ACTS ARE
HEREBY REPEALED. (Sec. 9, Child Labor Law.)

SEC. 10. RELATES TO CONSTITUTIONALITY OF THE
ACT. (Sec. 10, Child Labor Law.)

THE SHODDY LAW.

Among the miscellaneous laws under the bureau's enforcement is the act providing for the labeling or stamping of upholstered furniture, cushions, or other stuffed articles of hotel, boarding or lodging house, domestic or office use; so that the label or stamp "shall show the character of the materials with which such articles are so partly made or stuffed." In order to make the provisions of this law more effective, the Labor Commissioner appointed Mr. Roy W. Vance, of the Better Business Bureau of Los Angeles, as special agent of the Bureau of Labor Statistics. He was appointed on April 16, 1926, and was charged solely with the responsibility of enforcing this act. Since his appointment the following has been accomplished:

1. A preliminary survey was made of thirty-six factories, both large and small. All of these places visited were advised as to the sanitary conditions that had to be maintained in such factories and were warned regarding the proper labeling of second hand materials and shoddy.

2. Overstuffed furniture on sale in retail establishments were opened and examined in 27 stores, and about fifteen suites of three pieces each were found to contain second-hand materials. In each instance the retailers were advised as to the law and were ordered to attach proper labels to the articles offered for sale.

3. The proprietor of the "California High Grade Upholstering Co.," having failed to heed two previous warnings regarding the proper labeling of his furniture containing second-hand hair as filling, was arrested and tried before Judge Pope of the Los Angeles municipal court. He was sentenced to pay a fine of \$100 and, in addition, was given a suspended sentence of thirty days. Another criminal prosecution was started for the same offense against the proprietor of the "Reliable Upholstering Co." He was meted out the same punishment by Judge Richardson.

Rules for the Size of Label and Type Used Thereon.

On June 15, 1926, the bureau approved the following rules and interpretations with respect to the descriptive labeling of all upholstered furniture. These rules were adopted by the Retail Furniture Dealers Association of Southern California, the Furniture Manufacturers Association of Southern California and the Better Business Bureau of Los Angeles, with the consent of the bureau:

All articles of upholstered furniture shall have a label securely attached to such article.

On furniture having removable cushions the label shall be sewed to the outside cover under the removable cushion.

On furniture not having removable cushions the label shall be attached to the back of such article.

The label shall not be less than 4" x 6" in size, and shall have plainly and indelibly stamped or printed thereon, a statement in the English language, setting forth whether the wood used in the frame construction is hard or soft, the kind or kinds of joints used in said frame; the number and size of springs used in the base, **back** and removable cushion portions of such article, and the kind or kinds of materials used in the stuffing, and the grades and percentages of each material used, and whether the materials are in whole or in part new, old, second-hand, or shoddy, and the name and address of the manufacturer or vendor, or both; *provided*, that articles of furniture made in whole or in part of second-hand or cast-off clothing,

rag, second-hand, or cast-off material of any character whatever, or with shoddy, shall have a label showing the correct character of materials with which said cushion portions are stuffed, said label to be attached to such article in a *conspicuous place*.

The size type used for printing or stamping that portion of the label setting forth the kind of wood used in frame, the joints, the number of springs, and the materials used in filling and the grades and percentages of same, shall not be smaller than 12 point, *except*, that *old, second-hand, cast-off, or shoddy materials* must have their true character designated in type not smaller than *twenty-four point*.

Interpretations of Rules.

1. Each separate article of furniture shall be correctly labeled.
2. The label for each article is to be prepared at time of manufacture, and is to be available for examination by the inspector at all times.
3. Following is a list of woods that shall be designated as "Hardwood." All others shall be termed "Softwood."

DOMESTIC WOODS.

Alder	Eucalyptus
Ash	Gum
Basswood	Hickory
Beech	Laurel
Birch	Maple
Butternut	Myrtle
Cedar, Red (Juniper)	Oak
Cherry	Poplar
Chestnut	Sycamore
Cottonwood	Walnut
Elm	

IMPORTED WOODS.

Cedar (Spanish only)	Primavera
Jenizero	Rosewood
Juana Costa	Teak
Mahogany	

PHILIPPINE WOODS.

Almon	Guijo
Apitong	Lumbayao
Lauan, Red	Tanguile
Lauan, White	

Should other than the above designated hardwoods be used, a sample of such wood shall be furnished the Bureau for official classifications.

4. The word "Frame" shall include the base, front and back uprights, back member and arms. Softwood upholstering strips and shapings may be used upon frames designated as hardwood.

5. *Joints* shall be designated as glued and doweled, mortised, dovetailed, or nailed, etc. Top rail members may be screwed, and arm rails may be mortised and tenented in furniture labeled as glued and doweled.

6. *Stuffing* materials are to be designated by terms of common usage in the upholstery trade.

7. When more than one material is used for stuffing, the approximate percentages of each must be shown on label.

An upholsterer's tolerance of not more than ten per cent shall be allowed in figuring such percentages, *provided*, that should this tolerance be found to persist, the inspector shall notify the manufacturer in writing, and said manufacturer must then take immediate steps to rectify the condition.

8. Whenever the word "Hair" is used it shall mean all animal hair. If fibre or other mixture is used in hair, the kind and amount of such mixture shall be stated. The *grade of hair* must be stated in compliance with the following classifications:

No. 1 Hair shall be all new long drawings and shall contain no hog hair.

No. 2 Hair shall be the same as No. 1 Hair, except that it may contain not to exceed 20 per cent new hog hair.

No. 3 Hair shall be the same as No. 1 Hair, except that it may contain not to exceed 50 per cent new hog hair.

No. 4 Hair shall consist of all new hair of a lower grade than No. 3 Hair, but must be all animal hair.

9. Whenever the word "Felt" as applied to cotton is used in the said statement concerning materials, it shall be indicated in said statement whether said felt is "felted linters" or "felted cotton." If more than one material is used that fact shall be stated in said statement, i. e., "felted linters 50 per cent," "felted staple cotton 50 per cent."

10. Whenever any material is used which has more than one grade or kind, the accurate grade or kind shall be stated.

11. A subcaption on said label may be used at the option of the manufacturer upon which he may state any other specific feature of manufacture used in construction of such article of furniture.

12. Where furniture is catalogued, tagged, labeled, advertised, invoiced or sold by manufacturer, manufacturer's representative, jobbers, or wholesalers, it shall be in accordance with these rules and interpretations.

13. All furniture manufacturers and furniture dealers of the country, and doing business in the State of California, are invited to subscribe to the foregoing rules and interpretations.

14. False or misleading statements upon any label or tag on any article of merchandise are violations of the advertising laws of the State of California and are punishable by fine or imprisonment or both.

SAMPLE STANDARD UNIFORM LABEL.

Approved by Bureau of Labor Statistics and adopted by Furniture Manufacturers Association of Los Angeles, California.

FIRM'S NAME AND ADDRESS.

This article is labeled in compliance with act 4560 California State Laws, and with rules adopted by the Better Business Bureau of Los Angeles, California, and endorsed by the Bureau of Labor Statistics, State of California, June 12, 1926.

THE EIGHT-HOUR LAW ON PUBLIC WORKS.

Another of the miscellaneous labor laws enforced by the Bureau of Labor Statistics is section 653c of the Penal Code which limits the daily hours of employees on public works. Investigations made by the deputies of the Bureau disclosed that several large companies which were doing public improvement work under contract with cities, had allowed their laborers to work in excess of eight hours per day, seemingly in violation of the provisions of section 653 of the Penal Code.

Accordingly, as provided by law, the Bureau requested the city authorities, for which the improvement work was being done, to withhold from the payments which were then becoming due to the offending companies the sum of ten dollars for each man day during which overtime was worked in violation of the law, subject to final determination whether the overtime was worked as result of existing extraordinary emergencies, in which cases overtime was permitted by law.

The city authorities involved readily assented to this request of the Bureau and withheld the money from payments as they became due to the companies which were being investigated by the Bureau. But owing to the manner in which the books of these companies were kept, it was impossible to ascertain definitely whether the overtime worked was necessitated by conditions of extraordinary emergencies. The Bureau then ordered the companies to keep their books in a form calculated to show when, where and why overtime is worked. This was done in order that the Bureau might be in a position to tell whether an extraordinary emergency existed at the time the companies' employees worked in excess of eight hours per day. The company agreed to abide by the Bureau's request, and these cases were finally settled by the elimination of overtime on the public works done by these concerns except in cases of extraordinary emergencies. These investigations will have a lasting favorable effect upon the future observance of the eight-hour law on public works.

COLLECTION OF UNPAID WAGES.

Eighty-eight out of every hundred complaints received at the several district offices of the Bureau relate to nonpayment of wages. Of the 47,068 various complaints handled by the Bureau, 41,507, or 87.2 per cent, were complaints against employers who failed to pay wages when same became due under the laws of our state. Our laws pertaining to payment of wages provide for the payment of wages in cash or in negotiable paper, payable upon demand, without discount, at some bank or established place of business. They further provide that when an employee is discharged, "the wages or compensation for labor or service earned and unpaid at the time of such discharge shall become due and payable immediately." The wages of an employee, having no written contract, who quits or resigns his employment are "due and payable not later than seventy-two hours thereafter, unless such employee shall have given seventy-two hours previous notice of his intention to quit, in which latter case such employee shall be entitled to his wages or compensation at the time of quitting."

Section 7 of our wage collection law (Stats. 1919, Ch. 228) provides that:

The Commissioner and his representatives duly authorized by him in writing shall have the power and authority, when in his judgment he deems it necessary, to take assignments of wage claims and prosecute actions for the collection of wages and other demands of persons who are financially unable to employ counsel in cases in which, in the judgment of the Commissioner, the claims for wages are valid and enforceable in the courts; to issue subpoenas, to compel the attendance of witnesses or parties and the production of books, papers or records, and to administer oaths and to examine witnesses under oath, and to take the verification or proof or instruments of writing, and to take depositions and affidavits for the purpose of carrying out the provisions of this act and all other acts now or hereafter placed in the Bureau for enforcement.

Briefly stated, claims for wages are handled by the Bureau as follows: Every wage claimant is interviewed by an agent or deputy of the Bureau and the facts pertaining to the wages claimed are entered on uniform blanks used in all of the district offices of the Bureau. The employer is then notified that a claim for unpaid wages has been lodged against him with the Labor Commissioner, and he is asked to explain his reasons for failing to pay the claimed wages. In most cases the employers are cited to appear at a hearing before the Commissioner or his deputies at a specified time, when the wage claimant is also cited to appear. This procedure enables the Commissioner or his deputies to secure all of the facts involved in wage disputes. At this hearing an attempt is made to settle the differences between the employer and employee and to accomplish the payment of wages whenever the wages appear to be legally due to the complainant. If no settlement can be arrived at, and the employer refuses to pay the amount of wages that has been determined upon as due the claimant, a citation is issued directing the employer to appear at the office of the district attorney, to show cause why a warrant should not be issued for his arrest. The matter in dispute is then again threshed out before a representative of the district attorney's office in the presence of the employer, the employee and a Bureau's agent or deputy. If the employer still refuses to pay the amount of wages determined upon as coming to the complainant, a criminal war-

1924-1925
and
1925-1926

\$1,468,551.00

rant is issued for his arrest. Every effort is made to avoid court proceedings, but when no other alternative is available, criminal or civil action is started against the defaulting employer. As will be seen subsequently in this report, the Bureau has started numerous civil actions for the recovery of unpaid wages in addition to the many criminal prosecutions instituted for the same purpose.

The collection of unpaid wages consumes most of the time of the members of the Bureau's staff, and the Bureau's accomplishments are greatest in this connection. During the twelve years from 1915 to 1926, inclusive, the several branches of the Bureau of Labor Statistics collected three and one-half millions dollars (\$3,748,923.72) in unpaid wages, without any charges to the workers of our state. The growth of the Bureau's business of collecting unpaid wages is shown in tables 12 and 13, and in charts 10 and 11.

In the two fiscal years ended June 30, 1926, 41,507 wage complaints were received by the various district offices of the Bureau (Table 12), compared with 29,486 such complaints received during the preceding two fiscal years. This represents an increase of 12,021 wage complaints, or 40.8 per cent, in the number of similar complaints handled during the fiscal biennial period covered by this report. The increase in the amount of unpaid wages collected was even greater than the increase in the number of wage complaints received. Thus, the Bureau collected the sum of \$1,468,550.64 in the latest two fiscal years as compared with \$858,163.85, an increase of \$610,386.79, or 71.1 per cent.

The wage collections of the Bureau by biennial periods is shown in Table 12 and in Chart 10.

TABLE 12—Number, Per Cent, and Amount of Wage Claims Collected by the Bureau During the Ten Fiscal Years, 1915-1926, by Biennial Periods.

Biennial periods	Number of wage claims			Amount of wages collected		
	Filed with the bureau	Collected through the bureau	Per cent collected of total filed	Total	Increase or decrease (—) over preceding biennial period	
					Amount	Per cent
1915-1916.....	19,487	10,921	56.0	\$332,936 42		
1917-1918.....	16,832	8,668	51.5	271,502 89	—\$61,433 53	—18.5
1919-1920.....	15,107	10,718	70.9	409,355 33	137,852 44	50.8
1921-1922.....	22,718	10,538	46.4	450,164 31	40,808 98	10.0
1923-1924.....	29,486	15,247	51.7	858,163 85	407,999 54	90.6
1925-1926.....	41,507	23,342	56.2	1,468,550 64	610,386 79	71.1

The annual number of wage complaints filed with the Bureau and the amount of wages collected each fiscal year since 1915, is shown in Table 13 and in Chart 11.

It will be seen that in 1925, 57.3 per cent and in 1926, 55.5 per cent of the wage complaints were collected. It is impossible to collect all of the wage complaints presented to the Bureau. Many wage complaints are filed after the employer has become insolvent, making it very difficult and sometimes quite impossible to collect unpaid wages. Then, too, a certain proportion of the wage claims filed with the Bureau prove, upon investigation, to have no merit; so that these wage claims are dismissed and are not collected.

Sizes of Wage Complaints.

In the next two tables are presented data showing the sizes of the wage complaints handled by the Bureau. It will be noted (Table 14) that the largest percentage of complaints are those which fall in the \$5 to \$25 group and that the next largest group is the one between \$25 to \$45. Of the 28,811 wage claims tabulated according to the amounts involved, 39.2 per cent were under twenty-five dollars, and 57.7 per cent were under forty-five dollars. It is interesting to note that the proportions of wage claims falling within the several amounts involved shown in tables 14 and 15 are very nearly the same in all offices of the Bureau for which information is shown. The same percentages distribution as regards the amounts involved in the wage complaints filed with the Bureau of Labor Statistics are shown in our preceding report, for the fiscal years 1923 and 1924.

The data presented in Table 14 are shown graphically in Chart 12. The modal average wage claim, that is, the wage claim which occurs most frequently is for an amount between \$5 and \$25.

TABLE 14—Number and Percentage Distribution of 28,811 Wage Complaints Filed With the San Francisco, Los Angeles, Fresno, Oakland, and San Diego District Offices of the Bureau During the Calendar Years 1924 and 1925, According to the Amounts Involved in the Complaints.

Occupations of Wage Complainants.

The next table (Table 16) shows the occupational distribution of the wage complainants. The largest number of wage complainants, it will be observed, are workers engaged in manufacturing and mechanical industries, while the next largest number of complainants are persons employed in agriculture, and in domestic and personal service. Of the total number of 17,873 wage complainants in manufacturing industries and building trades, the largest proportion, 33.1 per cent, were laborers, and 16.3 per cent were carpenters. The next highest proportion of wage complainants in this group of industries were painters. These data seem to indicate that laborers and building trades workers suffer considerably from the failure of employers and contractors to pay wages.

Further examination of Table 16 shows that 4,043 farm hands and 587 fruit pickers filed wage complaints. This fact lends support to our legislative recommendation made in our last biennial report, and in this report, to the effect that farm laborers should be given liens on crops upon which they had worked.

TABLE 16—Number and Percentage Distribution of 41,507 Wage Claims Filed by Male and Female Workers during the Biennial Period Ending June 30, 1926, by Industries and Principal Occupations.

Industries and principal occupations	Both sexes

Savings to the Workers of the State.

It was shown in Table 12 of this report that the Bureau of Labor Statistics collected during the two fiscal years ended June 30, 1926, the sum of \$1,468,550.64 in unpaid wages. This money was collected without any cost to the workers who filed the complaints. It may be assumed that most of the wage complainants who availed themselves of the Bureau's services would have undertaken legal actions to collect the wages due them. In some cases, undoubtedly, the attorneys' fees for the collection of wages would be as low as ten per cent, but in most cases the fees would probably run from one-fourth to one-third of the amounts collected, while in some cases the fees charged by attorneys would be even higher. On the whole, it might be estimated that the wage collecting activities of the Bureau result in savings to the workers of the state from one-fourth to one-third of the total amount of unpaid wages annually collected by the Bureau. In other words, the Bureau of Labor Statistics saved to the wage complainants during the fiscal year 1925 and 1926 from \$367,137 to \$489,517, or from \$183,600 to \$244,700 annually.

Civil Actions in Wage Complaints.

Our laws pertaining to the collection of unpaid wages provide that the Labor Commissioner may prosecute actions for the collection of unpaid wage claims on behalf of persons financially unable to employ counsel. In many cases the Bureau has found it necessary to institute civil suits to recover wages from defaulting employers. At the present time the Bureau has on its staff two attorneys whose duties consist almost entirely in prosecuting civil actions under the wage laws of our state. The following tabulation (Table 17) shows in detail the number, kind, and present status, of civil suits started and completed by the Bureau's attorneys from September 15, 1924, to July 1, 1926. None of the civil suits listed in Table 17 were reported in our preceding biennial reports. In addition to these civil suits, many others were filed by the deputies of the Bureau in justices' courts.

TABLE 17—Civil Actions Brought to Court on Behalf of Wage Claimants from September 1, 1924, to July 1, 1925.

No.	Names of defendants	Date	Nature of action	Court	City	Number of claimants	Amount involved	Amount collected	Status as of July 1, 1925
1	Walter A. Grinton.	9/15/24	Wages.	Superior	San Francisco	68	\$8,409 98	\$4,205 00	Compromised.
2	S. F. Transfer Co.	10/29/24	Wages.	Justice's	San Francisco	7	240 00	240 00	Finished.
3	Anderson Valley Lbr. Co.	10/30/24	Wages.	Bankruptcy	Ukiah	1	96 35	96 35	Finished.
4	B. P. Morgan, d.b.a. Soft Water Laundry	11/3/24	Wages.	Justice's	Pittsburg	5	299 90	55 00	Judgment for balance outstanding.
5	R. T. Stone and Wm. Jay Conroy, d.b.a. Alta Lumber Co.	12/23/24	Wages	Superior	San Francisco	11	565 43		Judgment outstanding.
6	Rome C. Jacks	12/24/24	Wages and penalty	Superior	Salinas	6	580 67	533 00	Finished.
7	M. T. Michaels and Wm. M. Niblett, d.b.a. Whitehall Lbr. Co.	1/9/25	Wages and to foreclose loggers' liens.	Superior	San Francisco	12	786 60		Defendant disappeared; no assets.
8	Annette I. Slesson, d.b.a. Cazadero Redwood Lumber Co.	1/9/25	Wages.	Bankruptcy	San Francisco	51	4,140 29	2,208 97	Finished.
9	Katherine Hobbs	2/16/25	To foreclose mechanics' liens.	Superior	San Francisco	10	215 85	150 00	Finished. Balance waived by failure of claimants to appear at trial.
10	Mrs. Freda Salmonson	6/8/25	Wages and penalty	Justice's	Santa Cruz	1	82 50	82 50	Finished.
11	Barbette Hammell	10/2/25	Wages	Superior	San Francisco	9	922 63	801 00	Property held for balance of judgment.
12	J. C. Krause	11/16/25	Wages and penalty	Superior	San Francisco	7	445 60		Pending.
13	Homer E. Robinson and Cecil L. Davis, d.b.a. Redwood Lbr. Co.	10/14/25	To foreclose loggers' liens.	Superior	Redwood City	18	3,189 21	2,783 49	Finished.
14	Princeton Gold Mines Co.	1/8/26	Wages and penalty	Superior	San Francisco	10	1,845 00	1,845 00	Finished.
15	California Investment and Novelty Co. and Redwood Lbr. Co.	2/18/26	To foreclose mechanics' liens.	Superior	Redwood City	23	3,377 29	3,128 15	Finished.

17	Earl Paulsen, et al.	6/28/26	Mechanics' lien	Superior	Stockton	4	287 75		Pending.
18	Geo. H. Oswald	12/22/24	Wages.	Superior	Los Angeles	86	7,166 25		Judgment in Supreme Court. Appealed to Supreme Court.
19	J. D. Crawford, Thos. H. Fowler, John Lazarus	7/3/25	Wages.	Superior	Los Angeles	7	841 30		Pending settlement. Garnish pending.
20	Harold G. Moody	7/3/25	Wages.	Superior	Los Angeles	3	440 00	15 00	Pending settlement; attachment on real estate.
21	Jas. G. Allen, Vanderbilt News Inc.	7/3/25	Wages.	Superior	Los Angeles	1	432 00		Settled out of court.
22	Frank Hudson	7/31/25	Wages.	Justice's	Los Angeles	3	234 00		Defendant not located.
23	Miles P. Gregory	7/30/25	Wages.	Superior	Los Angeles	2	995 00	32 00	Attachment; pending.

Civil Suit to Collect Penalty.

The first suit of its kind was brought by the Bureau against the Cowell Portland Cement Company in the superior court at San Francisco in April, 1926. The action was brought under the 1925 amendment to the semimonthly pay day law, which provides that employers who do not pay their workers within the time prescribed, forfeit to the people of the state, to be credited to the general fund in the State Treasurer's office, the sum of \$10 for each failure to pay each worker. The suit was brought for the recovery of \$4,380.

The constitutionality of the law was attacked by the Cowell Portland Cement Company upon a demurrer to the Bureau's complaint. Arguments on the demurrer were heard on August 16, 1926, before Judge A. B. McKenzie of the superior court at Martinez, and the constitutionality of the law was sustained. The court ruled that the 1925 amendment adding civil penalties of \$10 for each employee who was not paid semimonthly substantially followed the New York law, which was declared constitutional by the United States Supreme Court in an unanimous decision in 1914 in the case of *Erie Railroad Company vs. Williams*, 233 U. S. 685.

DECISION HOLDING SECTION 6 OF THE STATE WAGE LAW CONSTITUTIONAL.

The Oswald Case.

On February 1, 1926, the Bureau of Labor Statistics won a very important court action in the state appellate court for the Second Appellate District. This action grew out as the result of the arrest of George H. Oswald by our Los Angeles office for his refusal to pay wages totaling in the neighborhood of \$16,000 to a group of 86 theatrical workers. Oswald was fined \$500 by the court with the alternative of 180 days in jail. After losing an appeal to the superior court before Judge Hahn of Los Angeles, he filed a writ of *habeas corpus* with the appellate court. The writ was denied.

Since the question involved in this case was the constitutionality of section 6 of our wage law, the decision in this matter in favor of the constitutionality of the sections is considered very important.

In the case *In re Crane*, 26 Cal. App. 22, decided in 1914, the appellate court declared unconstitutional the 1911 wage law, because it provided for imprisonment by *mesne* process for debt, regardless of the ability of the employer to pay the wages and regardless of whether or not fraud appeared in the transaction. In 1915, the legislature passed a new wage law which added the element of fraud and ability to pay, and these elements were stressed still further when in 1919 the legislature repealed the acts of 1911 and 1915, and in an entirely new wage law, clarified the matter by making the penal section read as follows:

Sec. 6. Any person, firm, association, or corporation, or agent, manager, superintendent, or officer thereof, who having the ability to pay, shall wilfully refuse to pay the wages due and payable when demanded, as herein provided, or falsely deny the amount of validity thereof, or that the same is due, with intent to secure for himself, his employer or other person, any discount upon such indebtedness, or with intent to annoy, harass, or oppress, or hinder, or delay, or defraud, the person to whom such indebtedness is due, shall, in addition to any other penalty imposed upon him by this act, be guilty of a misdemeanor.

The decision in the Oswald case will supersede the Crane case, and will prove of benefit not only to California but also to other states. This decision is reproduced in full below:

In the Matter of the Application of GEORGE H. OSWALD for a Writ of
Habeas Corpus.

(1) CONSTITUTIONAL LAW—IMPRISONMENT FOR DEBT—SECTION 15, ARTICLE I, CONSTITUTION—CRIMINAL LAW.—Section 15 of article I of the constitution does not in terms apply to criminal actions, but only provides against imprisonment for debt in civil actions.

(2) ID.—IMPRISONMENT—POWER OF LEGISLATURE.—The constitutional guaranties against imprisonment for debt have no application whatever to imprisonment for crime, and legislative bodies are free to provide for punishment by imprisonment of offenders who commit acts denominated by such legislative bodies as offenses against the public, provided that other constitutional limitations are not violated.

(3) ID.—PAYMENT OF WAGES—CONSTRUCTION OF SECTION 6 OF THE ACT OF 1919 (STATS. 1919, p. 294).—Section 6 of the act of 1919 (Stats. 1919, p. 294), which provides that it shall be a misdemeanor for any person, after having become indebted to a laborer for wages, and having the ability to pay, to refuse to pay the wages due when demanded, or falsely deny the amount or validity thereof, or that same is due, with the intent to secure for himself a discount upon such indebtedness, or with

intent to annoy, harass, oppress, or hinder, or delay, or defraud, the person to whom such indebtedness is due, and providing a penalty for such violation, is constitutional.

Application for writ of *habeas corpus* prayed to be directed to the chief of police of the city of Los Angeles to secure the release of petitioner from custody on a charge of violating an act to regulate the payment of wages (Stats. 1919, p. 294). Writ denied.

For Petitioner—George L. Greer.

For Respondent—J. M. Friedlander, City Prosecutor of the City of Los Angeles.

The petitioner is in custody pursuant to a judgment of conviction of a misdemeanor in that, after having become indebted to a laborer for wages amounting to \$300, then due and payable, the petitioner, although having the ability to pay, did wilfully and unlawfully refuse, neglect and omit to pay the same, and did then and there wilfully and unlawfully and falsely deny the amount and validity of said indebtedness, with the intent to secure a discount for himself, and with the intent to annoy, harass, oppress, hinder, delay and defraud his employee of said sum and indebtedness.

The offense charged was an act in violation of the provisions of section 6 of an act to regulate the payment of wages, etc., approved May 6, 1919 (Stats. 1919, p. 294; Deering's General Laws, 1923 ed., act 4743).

The sole point relied upon by petitioner is stated in his contention that the statute is unconstitutional, in that it provides for imprisonment for debt, contrary to the provisions of article I, section 15 of the constitution of California, which reads as follows: "No person shall be imprisoned for debt in any civil action, on mesne or final process, unless in cases of fraud, nor in civil actions for torts, except in cases of wilful injury to person or property; and no person shall be imprisoned for a militia fine in time of peace."

Prior to said act of 1919 the legislature had adopted "an act providing for the time of payment of wages," which purported to make it a misdemeanor for an employer to violate the provisions of section 1 of the act, which section provided that the earned and unpaid wages of an employee when discharged should become due and payable immediately, and also provided that when an employee, not having a contract for a definite period, quit or resigned his employment, his wages earned and unpaid should become due and payable five days thereafter. (Stats. 1911, pp. 1268 and 1269.) In the case of *In re Crane*, 26 Cal. App. 22, it was held that the act was unconstitutional, in that it in effect permitted imprisonment on mesne process for debt. The court declared that under the constitutional provision, which we have quoted, imprisonment for debt is prohibited in this state except in cases "where it is made to appear that the indebtedness was fraudulently contracted, or that there has been an attempted fraudulent disposition of the property of the debtor with the intent to delay or defeat the payment of the debt."

The statute of 1919 apparently is the result of a legislative effort to substitute for the act of 1911 a law which would not result in imprisonment for mere nonpayment of debt, but would only impose that penalty where the employer or his agent, having the ability to pay, wilfully refuses payment with a certain wrongful intent described as follows: "With intent to secure for himself, his employer or other person, any discount upon such indebtedness or with intent to annoy, harass, or oppress, or hinder, or delay, or defraud the person to whom such indebtedness is due * * *."

(1) In the first place, it should be noticed that section 15 of article I of the constitution, above quoted, does not in terms apply to criminal actions, but only provides against imprisonment for debt in civil actions. The decision in the case of *In re Crane*, *supra*, is based upon the assumption that the act there under review was an attempt to accomplish the prohibited purpose under the guise of punishment as for misdemeanor, but that in reality it was a method of enforcing, by imprisonment, the payment of debts. Without entering into a discussion of that decision it will suffice to compare it with the case *In re Nowak*, 184 Cal. 701. That case related to an ordinance of the city of Los Angeles, for the violation of which the petitioner was charged with the crime of misdemeanor. For the commission of this offense the petitioner was imprisoned. The court said: "This imprisonment does not violate his constitutional right not to be arrested for debt. Imprisonment for debt, as such imprisonment is defined in our constitutional guaranties, is necessarily imprisonment in a civil action for debt. As such imprisonment existed in the English common law, it was a provisional remedy, strictly analogous to the present-day remedy of attachment of goods. It is against such attachments that the constitutional guaranties against imprisonment for debt are directed. They have no application whatever to imprisonment for crime, and legislative bodies are free to provide for punishment

by imprisonment of offenders who commit acts denominated by the said legislative bodies as offenses against the public, provided, of course, that other constitutional limitations are not violated." (2) Conceding that the foregoing statement by the Supreme Court was *obiter dictum* (as petitioner herein contends that it was), yet we believe that it is a correct statement of the law. We further concede that at a date later than that of the Nowak decision the provisions of article I, section 15, of the constitution were again applied by a District Court of Appeal in like manner as was done in the Crane case, and that in the later case the Supreme Court denied a petition for rehearing. (*People vs. Holder*, 53 Cal. App. 45.)

(3) Are any other constitutional limitations violated by the provisions of the statute under which the petitioner has been convicted? So far as we know there is no direct decision upon the validity of this statute. There is a decision from which, by reasoning from analogy, an inference may be drawn. We refer to *In re Ballestra*, 173 Cal. 657. Petitioner there was in custody upon a charge of having violated the provisions of a statute which prohibited employers from issuing to their employees certain kinds of evidence of indebtedness in lieu of money. Sustaining the validity of the statute the court said that the right to make contracts, like other personal and property rights, is subject to reasonable regulation designed and calculated to promote the general convenience, prosperity and welfare. "Laws having a reasonable tendency to accomplish these results, and not imposing unreasonable burdens upon individuals, are valid. The provisions of the statute in question do not transgress this rule. As applied to ordinary transactions between employers and employees, of the kind embraced within its terms, the statute is, in our opinion, valid and constitutional."

In addition to what was said in the Ballestra case it will be appropriate to observe that the people of California have directly recognized that the relations between employer and employee are a proper subject for legislative regulation. Section 17½ of article XX of the state constitution (section adopted November 3, 1914) reads in part as follows: "The legislature may, by appropriate legislation, provide for the establishment of a minimum wage for women and minors and may provide for the comfort, health, safety and general welfare of any and all employees." It is reasonable to presume in support of the legislative enactment now questioned in this case, that some employers in this state in times past have wilfully refused to pay the wages due and payable to their employees, although they were able to pay, and have so refused with intent to secure some discount upon the indebtedness, or with intent to annoy, harass, oppress, hinder, delay, or defraud the employees to whom such indebtedness was due. As the Supreme Court said in the Ballestra case, referring to the subject matter of the statute there under review, "the purpose of the statute evidently is to prevent the evils which the legislature believed had arisen from such practices." So here, considering the condition which presumably the legislature had found to exist, and considering the terms of the statute which it enacted, we can not say that imprisonment for the misdemeanor described in this statute is imprisonment merely for failure to pay a debt. It is imprisonment for the wilful failure to pay the debt under circumstances which show an intent to oppress or otherwise defraud the employee. We are persuaded that the public has an interest in the prevention of wrongs of this character, just as much as it is interested in the prevention of some other of those wrongs against property or wrongs against persons which are commonly regarded as being properly within the scope of operation of criminal law.

The petitioner is remanded to custody.

CONREY, P. J.

We concur:
HOUSER, J.
YORK, J.

A new writ was asked of the Supreme Court by Oswald, based on same brief and same facts. After considering the appellate court's decision the Supreme Court approved the decision of the lower court and denied the writ. (March 11, 1926, 71 Cal. Dec. No. 3751—Minutes.)

Hunt vs. Clark.

Another important decision, bearing upon section 1 of our wage law (Stats. 1915, p. 1215), was rendered by the Third Appellate District

court on March 29, 1924, in the case of *Hunt vs. Clark*, 43 Cal. App. Dec. 766. This decision is too long to be included in full in this report but the summary of it is reproduced below:

Civil No. 2687. Third Appellate District, March 29, 1924.

JOE HUNT, *Plaintiff and Respondent*, vs. G. M. CLARK, M. DAVIDSON and R. M. PATTERSON and G. M. CLARK, M. DAVIDSON and R. M. PATTERSON, copartners, doing business under the name and style of Stockton Glass Company, and STOCKTON GLASS COMPANY, *Defendants and Appellants*.

(1) ACTION FOR WAGES—ABILITY OF EMPLOYER TO PAY—PLEADING.—In an action to recover wages, the allegation of the complaint that "defendants and each of them are and at all times herein mentioned have been able to pay the said balances due for wages, but have wilfully failed and refused to pay said balances due for wages or any of said balances or any part thereof and still fail and refuse," etc., does not involve a legal conclusion but is a statement of an ultimate fact, and while the fact thereby sought to be stated might have been more directly set forth, yet in the absence of a demurrer pointing out and objecting to the averment on the ground that it was not sufficiently direct, it stands as a sufficiently clear allegation that the defendants, upon the expiration of the period limited in the contract for the payment of such wages, were in the possession of money necessary to satisfy the claims of the plaintiff and his assignors for wages for services rendered during said period.

(2) ID.—CONTRACTS—AMBIGUITIES—CONSTRUCTION—PRIMARY FUNCTION OF TRIAL COURT—APPEAL.—Where a written contract or instrument is phrased in ambiguous or indefinite language, and by reason thereof parol testimony must be received to explain the language so as to get at the real intention of the parties as to the purpose, scope and effect of such contract or instrument, it is primarily the duty of the trial court to construe said instrument, or interpret the words thereof, by the light of the proof received. But the appellate court is not always bound by the construction placed upon an ambiguously phrased writing, even if the trial court has received parol testimony for the purpose of removing the ambiguities therefrom, or explaining the meaning of the words in the writing apparently unintelligible as so used, and the reviewing court might, in a given case, be justified in deciding, as a matter of law, that the parol testimony failed to explain the ambiguities or the words of dubious meaning as used in the instrument, and itself give the document a construction at variance with that given by the trial court.

(3) ID.—CONSTRUCTION OF CONTRACT—FINDINGS.—In such action, the record justifies the appellate court in concluding that the view or theory of the trial court in its findings with respect to the agreement for the payment of the wages involved in said action was not only that said agreement was invalid or void by virtue of the terms of the statute of 1911 (Stats. 1911, p. 259), as amended in 1915 (Stats. 1915, p. 1215), but that, even if it were to be conceded that said agreement did not come within the inhibitions of said statute, the defendants had, nevertheless, by the very terms of subdivision 3 of said agreement, unqualifiedly bound or obligated themselves to pay in money the employees for the four weeks' period covered by said contract, if, at the end of said period, they had the money with which so to pay said employees.

(4) ID.—EMPLOYER AND EMPLOYEE—PAYMENT OF WAGES—NEGOTIABLE OR ORDER ACT (STATS. 1911, p. 259, AMDT. STATS. 1915, p. 1215).—In such action the provision in said agreement for the compensation of employees for their labor in the form of glass was contrary to the plain mandates of section 1 of the Statutes of 1911 (Stats. 1911, p. 259), as amended in 1915 (Stats. 1915, p. 1215).

(5) ID.—AGREEMENT AS TO ASSIGNMENT OF LEASE OF PLANT—CONSTRUCTION—EVIDENCE.—In such action the plaintiff was not precluded from recovery by an agreement entered into between his assignors, as employees, and their employers—a copartnership which purported to provide a plan whereby the plant of the copartnership was to be operated by the employees and a third party whenever the lease of said plant was assigned to said employees and said third party, where it did not appear that said lease was ever assigned by the copartnership to the said employees and said third party, and where it did appear that for the period for which wages are claimed said copartnership had the control and management of the plant and operated the same.

(6) ID.—ASSIGNMENTS OF CLAIMS—EVIDENCE—FINDINGS.—In such action the finding that the claims therein sued for were assigned by the employees to the plaintiff was supported by the evidence.

Appeal by defendants from judgments of the Superior Court of San Joaquin County, George F. Buck, Judge, in actions to recover wages. Affirmed.

The Lohman Case.

Theo. Lohman was arrested refusing to pay wages to a group of workers who filed wage claims with the San Diego district office of our Bureau. He applied for a writ of *habeas corpus* on the ground that the criminal provisions of sections 2 and 4 of our wage law (the semi-monthly pay day sections), were unconstitutional. The writ was denied in Dec. No. 2164, 49 Cal. App., March 25, 1926.

WAGES OF ALASKA CANNERY HANDS.

The Bureau has been continuing its supervision over the paying off of Alaska salmon boat crews. During the two years of 1924 and 1925 the Bureau supervised the paying off of such pay rolls in excess of \$352,000. This work was begun by the Bureau in 1913, in accordance with the provisions of an act passed by the legislature of that year. This act which was recommended by the Bureau with a view to safeguarding the earnings of this class of workers, reads, in part as follows:

Sec. 2. Upon application of either the employer or the employee, the wages earned in seasonal labor, shall be paid in the presence of the Commissioner of the Bureau of Labor Statistics or an examiner appointed by him.

Sec. 3. The Commissioner shall hear and decide all disputes arising from wages earned in seasonal labor and he shall allow or reject any deductions made from such wages; provided, however, that he shall reject all deductions made for gambling debts incurred by the employee during such employment and for liquor sold to the employee during such employment.

The following tabulation shows the wages which were paid for the season's work in 1925:

<i>Kind of work</i>	<i>Wages for the season</i>
General work	\$170 00
Butchers	210 00
Piling cans	200 00
Washing lye	195 00
Washing fish	190 00
Elevators	190 00
Catching cans	195 00
Retorts	195 00
Pue fish	190 00

Cooks	450 00
Waiters	190 00

Filipinos and Mexicans are recruited for this work by private employment agents whose services are engaged by S. Young and Mayer Co., owners of a "gents" furnishing store in San Francisco. The reason why this company recruits the Alaska cannery hands is explained below. This fact is mentioned here because the Alaska cannery hands are paid off at the offices of Young and Mayer where a deputy of the San Francisco office of the Bureau is sent to adjust disputes which arise in connection with the paying off of the men.

Tables 18, 19 and 20 show the earnings of the Alaska cannery hands. In examining these tables it should be remembered that prior to the time the Bureau began supervising the paying of Alaska cannery hands, these workers would spend most of their earnings for drink and gambling, either en route to and from Alaska, or in Alaska; so that upon their return to San Francisco they would have little money left and would often become public charges.

The average earnings per man in 1924, as shown in Table 18, varied from \$178.83 to \$204.76, the average for all men being \$188.94 for the season. The average earnings per man in 1925 was \$187.82, a difference of only \$1.12. The deductions shown in these tables are explained in tables 21 and 22.

It will be seen from Table 20 that the average amount which was due each man upon arrival in San Francisco in 1924 was \$124.48, while in 1925, the average was \$131.50, an increase of \$7.02 or 5.6 per cent.

1925.....	9	825	108,485 15	131 50

In tables 21 and 21A are shown the items for which deductions are made from the season's wages of the Alaska cannery hands. It will be seen that in 1924, 50.8 per cent of the total deductions were for mer-

chandise in San Francisco stores, while in 1925, 48.6 per cent was for merchandise in San Francisco. These deductions are made by S. Young and Mayer Co., the "Alaska outfitters," who recruit the cannery hands for the Alaska salmon packers.

TABLE 21—Amount and Percentage Distribution of Deductions Made from Earnings of 1045 Alaska Cannery Hands in 1924.

Items	Deductions

Every year, upon the return of the cannery hands from Alaska, many complaints are filed in our San Francisco office alleging exploitation, bad treatment aboard ship, and in Alaska. In August, 1925, a group of cannery hands filed such complaints of abuses by S. Young and Mayer who were alleged to have coerced the complainants to buy clothing at exorbitant prices. It was also alleged that this firm was operating an employment agency without a license. To ascertain the facts in this case, a hearing was held in our San Francisco office on May 29, 1925, at which time the following information concerning the operations of this labor recruiting store came to light:

1. That Young and Mayer Co., which is a corporation organized under the laws of the State of California, recruits approximately 1700 workers every year for work in the Alaska canneries. This company, of which E. P. Mayer appears to be the most active member, has a contract with Quong Ham Wah and Company, owned by Mr. Lem Sen. This contract provides that the S. Young Tailoring Co. must furnish to the Alaska Packers Association a certain number of people for each and every ship that sails for Alaska. The contract stipulates the wages that are to be paid to the various kinds of workers hired, such as foreman, cooks, butchers, can pilers, etc.; it further stipulates that the men hired should be either Filipinos or Mexicans and of no other race or nationality. The contract makes the S. Young Tailoring Co. liable for damages to the amount of \$200 per day for each and every day the sailing of the vessels is delayed because of lack of the necessary quota of men provided for in the contract; moreover, it makes the company liable to the extent of \$250 for each and every man that may be short of the number agreed upon. In spite of these provisions of the contract there is nothing in the contract to show that any consideration is received by the S. Young Tailoring Co. for the execution of the said contract.

2. The Alaska Packers Association have an agreement with Quong Ham Wah Co. for the canning of a certain number of boxes of salmon during the salmon season for which the Alaska Packers Association pays the Quong Ham Wah Co. a stipulated sum of money per box of salmon.

3. Len Sen of the Quong Ham Wah Co. hires the Chinese laborers, but he subcontracts to S. Young Tailoring Co. the hiring of the Mexican and Filipino workers.

4. Apparently, the sole consideration that passes between Quong Ham Wah Co. and the S. Young Tailoring Co. for the latter's obligation to furnish the workers is the volume of business which the S. Young Tailoring Co. is enabled to do by way of furnishing various clothing and supplies to the men shipped to Alaska.

5. It was stated by E. P. Mayer at the hearing that the volume of business which accrues to him as a result of his hiring of the workers runs up as high as \$75,000 per year.

6. The S. Young Tailoring Co. sells to the Alaska Packers Association workers diverse articles.

7. The Alaska Packers Association pays to the S. Young Tailoring Co. \$3 for every mattress furnished to the men shipped to Alaska, but for the other articles furnished to the men, the men themselves pay out of their wages.

While there is no evidence that the S. Young Tailoring Co. is charging the Alaska cannery hands excessive prices, some of the prices appear to one somewhat unnecessarily high; thus, for instance, the shaving mugs are sold for 50 cents apiece, trunks at \$10 apiece and handkerchiefs two for a quarter.

S. Young Tailoring Co. has paid the following amounts to several employment agents for the hiring of Mexicans for sending to Alaska in 1925.

International Labor Agency-----	\$583 00
Plaza Employment Agency-----	874 50
R. Rodriguez -----	1,166 00
Independent and Standard-----	762 45
M. Lopez -----	159 27
	<hr/>
	\$3,545 22

The S. Young Tailoring Co. is reimbursed by the Quong Ham Wah Co. for all expenditures incurred in the hiring of men including the fees paid to the agencies. Mexicans and Filipinos hired to go to Alaska are obliged to sign the following agreement, which they are unable to read:

-----, 192--

I hereby agree to work for any cannery to be designated by the YOUNG & MAYER COMPANY, agents for the contractors of salmon canning companies owning salmon canneries in Alaska, for the season of 192--. The place where I am to work to be fixed by the said YOUNG & MAYER COMPANY; the amount of wages to be one hundred and seventy dollars (\$170); board and lodging from San Francisco to Alaska and while in Alaska and return, free and no charge to me. The hours for which I am to be employed to be fixed by the said contractors or their foremen respectively. Medical assistance to be given free for all injuries or sickness caused while performing the duties and in the course of my employment.

In consideration of the foregoing the said YOUNG & MEYER COMPANY are advancing to me my transportation fare from Los Angeles to San Francisco, California, together with all other expenses incurred by them in employing me; and I hereby agree that the transportation fare and such other expense may be deducted from my wages and I order that they may have the amount charged to me and paid to them. Wages above mentioned are payable only at the office of S. YOUNG TAILORING CO., Inc.

The above is hereby accepted. -----

Dated-----

The legislature should afford greater protection to the men who are hired annually to be sent to Alaska. These men are induced to sign contracts which they do not understand and which bind them to hard labor and unfair working conditions for a period of six months. They are always preyed upon by labor contractors and merchants who exploit the ignorance of these workers for their own selfish uses.

CRIMINAL PROSECUTIONS.

The number of criminal prosecutions started by the Bureau in the two fiscal years covered by this report was 1,090 compared with 294 in the preceding two fiscal years (Table 22). This represents an increase of 796 prosecutions or 271 per cent in the latest biennial period covered by this report. In other words, for every criminal prosecution which the Bureau started in the preceding biennial period, it started 37 prosecutions during the latest biennial fiscal period. Not only was the number of prosecutions greater but the percentage of convictions was also increased from 36.1 in the preceding biennial period to 48.4 in the biennial period covered by this report.

The disposition of the criminal actions started by the Bureau is shown in Table 23. The laws which were violated most frequently are also shown in this table. In both fiscal years 1924-25 and 1925-26, the number of arrests were highest for violations of the following acts:

First—The wage laws.

Second—The child labor law.

Third—The eight hour law for female employees, and

Fourth—The private employment agency act.

TABLE 22—Number of Criminal Prosecutions Brought and Convictions Secured by the Bureau, 1911-1912 to 1925-1926.

PROSECUTIONS UNDER THE PRIVATE EMPLOYMENT AGENCY AND TRADE SCHOOL ACTS.

In our twenty-first biennial report we described several types of motion picture make-up schools, which, by false advertising in the help wanted columns of the newspapers, had defrauded many job seekers. Our prosecution of these so-called trade schools in 1923 did not terminate our difficulties with them. During the fiscal years 1924 and 1925 and 1926, our Los Angeles district office was again receiving complaints against the proprietors of these schools. The complainants against these schools averred that they had been promised work after the completion of "a course of lectures in the art of make-up and acting before the camera," for which "course" they paid \$25. The following statement of a complainant filed in our Los Angeles office is typical of many other similar statements:

"I saw an ad in the *Daily News* about the 5th or 6th of March, 1925, which read: 'Would like 25 or 30 people to qualify for the screen service, and apply at the down town office at 643 So. Olive street.' I think the ad read for "men" only.

"I went to their office and talked to Mr. S—. He said to me before I even sat down: 'Well, you are just the type we need.' I asked him the details of the proposition and he told me that he could not promise me work, or any thing like that, but would introduce me to directors at the studios for the purpose of getting work. He said that they would train us in the art of make-up and acting before a camera for the sum of \$25. He said that they were in touch with the studios, but that he could not personally promise me work, but would introduce me to the casting directors.

"I signed the contract and paid \$10 down. He (Mr. S—) called my attention to the clause in the contract 'I have not been promised work,' or to that effect, and he said that that was just to clear himself with the Labor Commission."

"Q. Did you believe from what he told you that he would furnish you work?"

"A. Absolutely, or I would not have made any attempt to put in any money to get a job.

"Mr. S— said some of the former students were making as high as \$125 per week, and some were getting \$50, depending on their ability. He had pictures on his desk that he showed us and said they were pictures of former students who were now getting a good salary, and had gone through his school.

"Mr. S— sent me to M. F. for my make-up, for which I paid about \$3.60. I attended six classes. Mr. L. V. directed the classes. The course consisted of 12 lessons, 3 lessons a week."

"Q. How much did they attempt to teach in the class?"

"A. They told us how to put on the make-up and after we put it on they would put us through some scenes, but they did not give us any real dope.

"Mr. S— said that a director came over from the studios but I found out later that the man who came was a former student at the school. Mr. S— said that casting directors would come to the school and pick out the people that he thought he could use. Mr. L. V. said

'We take the students to the studios and let them work in pictures,' but he never set any date and did not take us to the studios.

"I got discouraged as I had not gotten anywhere, so I quit."

The proprietor of the school complained of in this statement, Robert Berton Wilcox, was ordered many times by our Los Angeles deputies to discontinue operating his Hollywood Screen Players' Studio at 643 Olive street, Los Angeles, in violation of the law, but on all occasions he defied our Bureau and continued to carry on his nefarious business of cheating applicants for work. After a substantial number of complaints had accumulated in our Los Angeles office against this and similar trade-schools, we secured warrants, on May 11, 1926, for the arrest of Robert Berton Wilcox, Harry Keaton, proprietor of the Independent Studio at 1201 Sun Building and 1761 Glendale boulevard.

Both Wilcox and Keaton were convicted by Judge James Pope of the Los Angeles municipal court for operating employment agencies without a license. Wilcox was convicted on May 28, 1926, and was fined \$250, the maximum fine penalty provided in our trade-school act. Keaton was convicted on June 3, 1926; he was sentenced to sixty days imprisonment and \$250 fine. Keaton was not only charged with making false promises of employment and running an employment agency without a license, but was also charged with annoying women who went to his studio looking for work in the movies. The case against another defendant was dismissed because the court held that he was not running an employment agency but was acting as publicity agent for certain individuals who wanted to become known in motion picture studios.

Another prosecution undertaken by our Los Angeles district office for violation of the employment agency act and the trade school act resulted in the conviction of A. R. J., head of the U. B. College. He was found guilty by Judge Pope on June 3, 1926, on the charge of operating an employment agency without a license from the Labor Commissioner and was fined \$250. The fine was suspended on condition that he would pay all fees collected in violation of the law.

THE STATE FREE EMPLOYMENT BUREAUS.

Number of Jobs Filled.

In part III of this report are presented detailed statistics of the operation of the state free employment offices. The following is a summary of the work of these bureaus during the two fiscal years 1924-25 and 1925-26.

The number of jobs filled by the state free employment offices each fiscal year from 1923 to 1926 is shown in Chart 13, while the number of jobs furnished during the two latest biennial periods is shown graphically in Chart 14.

Table 24 shows the number of jobs filled by each of the free offices established by the Bureau, as well as percentages of the total jobs furnished by each of the offices.

TABLE 24—Number and Per Cent of Jobs Filled by Each of the Several Free Employment Bureaus During the Fiscal Years of 1924-1925 and 1925-1926.

Offices	Number of jobs filled, fiscal year		Both fiscal years, 1925 and 1926	Per cent of total
	1925	1926		
Totals.....	151,542	190,041	341,583	100 0

San Francisco.....	32,939	37,739	70,678	20 7
San Jose.....	9,950	12,417	22,367	6 6
Stockton.....	5,213	7,717	12,930	3 8
Hollister ¹		512	512	0 1
San Bernardino ²		350	350	0 1

¹ This office was opened on June 17, 1926.

² This office was opened on March 1, 1926.

The Hollister office was opened in June, 1926, and the San Bernardino office was opened in March, 1926. Excluding these two offices, the following tabulation shows the ranks of the several permanent free employment offices according to the percentages of jobs they filled during both of the fiscal years covered by this report.

Rank of offices	Percentages of total jobs filled in 1925 and 1926
1. Los Angeles	36.2
2. San Francisco	20.7
3. Oakland	15.7
4. San Diego	7.2
5. San Jose	6.6
6. Fresno	5.5
7. Sacramento	4.1
8. Stockton	3.8

In Tables 26 to 33 are presented data showing the monthly placements by the several free employment offices of the Bureau during the calendar years 1921 to 1925, inclusive. Table 34 shows the monthly placements by the San Diego office since its establishment in December, 1923.

An analysis of Table 26, and the subsequent tables relating to the placements of our employment bureaus shows considerable variations in the total number of placements each year since 1921. It must be remembered in studying these figures that an employment office does not create jobs for the unemployed and that the number of jobs furnished each year must vary with the existing industrial conditions. Thus, it will be seen (Table 26) that in 1922 and 1923 the total number

of jobs furnished was greatest. In 1925, the number of jobs was greater than in 1924, and that the average annual placements for the five years was 182,680 for all offices included in this table.

Chart 15 shows the average monthly placements for the five-year period and for the year 1925. It will be seen that the highest average monthly placements were made in September; the next highest in October; and the next highest in May and August.

TABLE 26—Total Number of Jobs Filled by the Fresno, Los Angeles, Oakland, Sacramento, San Francisco, San Jose and Stockton State Free Employment Bureaus from 1921 to 1925, by Years and by Months.

*The San Diego Bureau was opened in December, 1923.

Labor Requested and Labor Supplied.

During the fiscal year ended June 30, 1925, the eight full-time free employment offices received calls for 169,616 workers; in the following fiscal year, 210,449 workers were wanted by employers. In 1925, these bureaus placed 151,542 persons, and in 1926, they placed

190,041 persons. In the first year of the biennial fiscal period, the Bureau supplied 89.3 per cent of the total number of persons wanted by employers; in the second year of the biennial period, the Bureau supplied 90.3 per cent of the total number of persons wanted by employers. In this respect the free employment offices did better than during the last biennial period when the number of persons supplied was between 84 and 88 per cent of the number wanted by employers.

Cost per Job.

The cost to the state of filling the 341,583 jobs during the biennial period 1924-25 and 1925-26 was \$157,596.11, or 46 cents per job. The following tabulation shows the cost per job to the state during the last three biennial fiscal periods:

<i>Biennial fiscal period</i>	<i>Cost per job</i>
1920-21 and 1921-22 -----	54 cents
1922-23 and 1923-24 -----	36 cents
1924-25 and 1925-26 -----	46 cents

Thus, it will be seen that in the fiscal period covered by this report the cost of filling a job was 10 cents or 27.8 per cent greater than in the preceding biennial fiscal period, but it was 8 cents or 14.8 per cent less than during 1920-21 and 1921-22. In large measure, the higher cost of filling a job during the latest biennial period is due to the initial cost of opening new employment offices in Hollister, San Bernardino, Modesto, Marysville, Chico, and Bakersfield. The cost of opening these offices has already been incurred during the biennial fiscal period covered by this report, but the last five offices mentioned have not begun to function during this period.

Savings to the Workers.

The cost to the state for furnishing each free job has been estimated in the preceding paragraph at 46 cents. The average fee per job charged by general employment agencies, according to the latest data incorporated in this report, is \$2.27. During the biennial period covered by this report, the Bureau furnished free 341,583 jobs. If the workers who received these jobs free would have had to pay for them, the average fee charged by private employment agencies, the cost to them would have been \$775,393.41. But approximately only fifty-four per cent of the jobs furnished by the state free employment offices last eight days or over. We will assume, therefore, in order to make our estimate conservative, that the workers would have had to pay the average fee charged by private employment agencies only for the jobs lasting eight days or over. Fifty-four per cent of 341,583 jobs gives us a total of 184,455 jobs lasting eight days or over. If we multiply this number of jobs by \$2.27, the average fee, we arrive at \$418,713, the amount saved to the workers in two years. One-half of this, \$209,356, is the amount saved annually to the workers during the last two fiscal years, through the operation of the state free employment offices.

PRIVATE EMPLOYMENT AGENCIES.

In a preceding section of this report were presented data relating to the number of complaints received by the Bureau against persons for violating the provisions of the employment agency act. This section of the report is devoted to showing the number and kinds of agencies licensed by the Bureau of Labor Statistics, the fees charged by the agencies, the regulations of the Labor Commissioner pertaining to the private employment agencies, and the opinions of the Attorney General on matters pertaining to the interpretation of the employment agency act.

Number and Kind of Employment Agencies.

Table 35 shows the number of employment agencies licensed by the Bureau each year since 1910. It will be seen that with the exception of the years 1911, 1915, 1916, 1917, and 1919, each year showed an increase over the preceding year. The falling off in the number of employment agencies licensed by the Bureau during the fiscal years 1915, 1916, 1917 is undoubtedly due to the establishment of the free employment offices. In 1925 the number of employment agencies increased by 20, and in 1926, the number increased by 11.

Tables 36 and 37 show the kinds of agencies licensed by the Bureau. It will be observed that the largest number of agencies are "general," that is, agencies which furnished jobs to skilled and unskilled workers in various industries. The "commercial" agencies furnish jobs to men and women in office or professional work. The kinds of jobs furnished by the other agencies can readily be told by the names of these agencies, with the exception of the oriental agencies, which furnish largely, hotel and domestic jobs.

Fees Charged by Private Employment Agencies.

In Table 38 are shown the fees charged by commercial employment agencies. In this table data were tabulated for 44 commercial agencies whose contracts were verified as to the percentages of fees charged. It will be noticed that about half of the agencies charge fees ranging from 25 to 50 per cent of the first month's salaries. These fees are charged for positions lasting ninety days or more. For jobs lasting less than ninety days, commercial employment agencies generally charge ten per cent of the amount earned. Under our private employment agency act the employment agent may charge whatever fee is agreed upon between the agent and the applicant for employment. The law provides, however, that each agency must post a maximum schedule of fees, which the agency may not exceed, without having it first certified by the Labor Commissioner. The average fees charged by commercial and other employment agencies, for which data were tabulated in this report, are shown in Tables 39 to 51, inclusive. In these tables the average fees shown are for both temporary and permanent jobs. It is important to bear this fact in mind when studying the figures presented in Tables 39 to 51.

Rules and Regulations Governing Private Employment Agencies.

By virtue of the authority vested in him by Section 19 of the Act Regulating Private Employment Agencies and for the purpose of facilitating and making certain, uniform and effective the enforcement of the provisions of this act, the Commissioner of Labor promulgated the following rules and regulations to govern all licensed employment agencies of California:

1. All provisions in employment agency contracts and receipts which provide for payment by applicants for employment of any fees for positions which are not on the books of the agency as bona fide orders on the date the applicant is sent out to the position, must be eliminated.

a. Under this ruling a contract can not provide that if a temporary position develops into a permanent one, either immediately or at some future time, the applicant agrees to pay the full permanent fee, after deducting therefrom the amount paid on a temporary basis. In other words, a position is either a temporary or permanent one and can not be both. A permanent position under the law is one lasting beyond ninety days.

b. Under this ruling a contract can not provide that if the applicant secures a position of another nature at a higher rate of pay he must pay an additional fee.

2. All provisions in employment agency contracts and receipts which provide that the applicant waives in advance his right to claim exemption from execution or attachment in case suit is brought to collect the employment agency fee, must be eliminated. If contracts and receipt forms are already printed the elimination may be made by crossing out the offending provisions but when new contracts or receipt forms are printed these provisions must be left out. (General Circular of January 13, 1925.)

3. Every applicant who is sent out for employment from whom a fee is to be received must be immediately given a uniform receipt in the form and containing the particulars required by section 11 of the Employment Agency Act.

4. Where contracts are used in addition to the uniform receipt, they must contain a cross-reference to the uniform receipt to the following effect: "This contract is subject to the terms of a uniform receipt to be issued later, to be numbered -----" and when the uniform receipt is issued, its number must be inserted in the space required.

5. All uniform receipts must be printed and numbered consecutively in printing, in original and in duplicate, the original to be given to the applicant and the duplicate to be kept at the agency.

6. All supplemental receipts for fees paid must be on either a uniform receipt blank containing the information required by Section 11 or on a supplemental receipt blank which refers to the original uniform receipt by number and is itself numbered consecutively in printing, in original and in duplicate, the original being given to the applicant paying the fee and the duplicate kept at the agency.

7. A sample copy of all contract and receipt forms used must be sent in to the San Francisco office of the Bureau for approval, if they have not already been sent in in connection with an application for license for the current year commencing April 1, 1926.

8. Every agency shall keep a registry of employers as provided by section 9 of the act which shall contain the information asked for in the approved form: namely, the order number; date of receipt of order; manner of its transmission; name and address of the person giving the order; name and address of the employer; the address where the applicant is to report for position; the kind of help wanted, the length of employment; rate of wages; hours of labor; whether or not board and lodging are furnished; the cost of transportation and by whom paid or advanced; and a general statement as to sanitary conditions and compliance with labor laws.

Such employers' register may be kept either in book form, card form or loose leaf ledger form.

9. In no case shall a registration fee be charged as this is in violation of section 12 of the act. Any deposit put up at a time when the agency does not have on its books a bona fide position to which the applicant paying the fee may immediately be sent is considered a registration fee within this ruling, which is based on an opinion from the Attorney General of California, dated April 6, 1926. In all cases where a fee is paid it must be applied to a particular position and a uniform receipt covering the position in question must be given the applicant in all cases where a fee is charged.

10. No agency shall be conducted in connection with premises where rooms are used for living purposes or where boarders or lodgers are kept. (General Circular of May 6, 1926.)

Rules and Regulations Governing Theatrical Agencies.

On June 26, 1926, the following regulations were promulgated by the Labor Commissioner to govern contracts between theatrical employment agencies and applicants for employment at these agencies. These regulations were promulgated after a public hearing was held in our Los Angeles office on June 16, 1926:

1. Each contract shall provide that in so far as engagements in the State of California are concerned, a special provision in the

contract, or a special contract, shall be made providing that all engagements to be filled within the State of California shall conform to the requirements of the Employment Agency Act of the State of California.

2. That such contracts shall provide sufficient information and full routing directions to be given to the artists, or performers, before any work is performed by them within the State of California.

3. That where the contract is made out of the State of California, it shall provide the number of bookings and the amounts to be earned within a certain period; and that the booker will be responsible for any lapses to the extent that the artists must be enabled to earn a specified sum within a specified period, and that the routing must end at the place of beginning.

4. Provision shall be made in the contracts for the transportation from and to the place of contract; also, that in case of termination of the contract for cause, suitable provision be made for the expense and transportation of the artist to the place where the contract was made.

5. The contract shall contain a special provision so as to call attention of the artist to the Child Labor Law of the State of California, which provides that a permit must be issued by proper authorities before a minor under eighteen years of age can perform, and that in issuing the permit, the authorities may exercise their own discretion.

6. The provisions in the contract providing for excuse from payment of compensation for service in cases beyond the control of the booking agency shall be eliminated in so far as the performances provided for are within the State of California.

Digest of the Opinions of the Attorney General on the Private Employment Agency Act of California.

The opinions of the Attorney General relating to the Private Employment Agency Act are briefly summarized in the following paragraphs. These opinions were secured by the Bureau to make the administration and enforcement of the law more effective.

1. Surety bonds furnished by employment agents may be cancelled with consent of Labor Commissioner.

Question: May a surety company withdraw from a bond filed by a licensee under the Employment Agency Act?

Opinion: The bond filed under the provisions of this act runs during the term of the license. It is a contract on the part of the surety company to pay damages arising from the misconduct of the licensee, as specified in section 7 of this act. As such contract it may be cancelled upon the consent of all the parties interested therein, so that when your department has accepted a new bond on behalf of the licensee there can be no objection to the cancellation of the old bond and the release of the surety found thereon from liability arising from any acts committed after such release. (Rendered April 20, 1916.)

2. Employment agencies charging fees to employers only do not require license from Labor Commissioner.

Question: If the employer, not the applicant for employment, pays the fee to the employment agency, does that agency require a license from the Labor Commissioner?

Opinion: Reading the act as a whole—it appears to be the clear intent of the legislature to regulate as employment agencies those persons who engage in such business for a fee to be exacted from the applicant. (Rendered August 25, 1917.)

3. One employment agency license may be issued to several persons and to nonresidents of California.

Question: (1) May an employment agency license be issued to a partnership, copartnership or corporation?

(2) May an employment agency license be issued to a nonresident of the state or to a foreign corporation?

Opinion: (1) Where a partnership applies for a license to conduct an employment agency and the statutory requirements are complied with, the Commissioner of Labor is authorized, if he approves of the application and the bond, to issue a license to conduct such agency, and it is my opinion that under such circumstances it is proper that the license be issued, for instance in the name of John Doe and Richard Roe, copartners, doing business under the firm name and style of Doe & Roe. In such event, neither of the partners would be licensed to carry on the business of an employment agency individually, and if either of the partners should desire to engage in the business of procuring employment for persons, not as a partner, but as an individual and independently of the partnership, it would be necessary, of course, that he first obtain an individual license.

(2) In the absence of provision to the contrary, I am of the opinion that a license may legally issue to a foreign corporation if it meets the statutory requirements to the satisfaction of the Commissioner of Labor, for a corporation is expressly declared in section 1 of the act to be a "person" subject to license. In such case it would seem that the license should be issued in the name of the corporation and such license would entitle the designated agent of the corporation in this state to carry on the business of an employment agency on behalf of the corporation. (Rendered February 12, 1918.)

4. Orders on employers for unearned wages or salaries are invalid.

Question: Several employment agencies have the following paragraph included in the agreements which applicants for employment are required to sign upon accepting a position:

"This agreement shall constitute an order on my employers for any commission that may be due said----- and said employer is hereby requested to pay such amount to said----- and charge the same against my salary."

Do agreements including such paragraphs come within the provisions of section 955 of the Civil Code of this state?

Opinion: Such agreements are assignments or orders for wages or salaries prior to the same having been earned and as such it is not valid under that portion of section 955, which reads as follows:

"No assignment of, or order for, wages or salary shall be valid unless at the time of the making thereof, such wages or salary have been earned, except for the necessities of life and then only to the person or persons furnishing such necessities of life directly and then only for the amount needed to furnish such necessities." (Rendered June 10, 1922.)

5. Employment agencies may charge fees for positions actually sold to applicants.

Question: May the Labor Commissioner disapprove contracts between employment agents and applicants for employment which contain the following provisions?

First: That if a temporary position develops into a permanent position, either immediately or at some future time, the applicant agrees to pay the full permanent fee, after deducting therefrom the amount paid on a temporary basis.

Second: That if the applicant secures a position of another nature at higher salary he must pay additional fee. For instance, a man who is both a bookkeeper and a clerk is placed in a position as a clerk. Thirty days later the bookkeeper for the firm quits and the applicant who was placed as a clerk is given his position as bookkeeper at a higher rate of pay.

Third: That the applicant waives exemption from execution or attachment in case suit is brought to collect the employment agency fee.

Opinion: First, under sections 11, 12, and 19 of the Employment Agency Act it is not within the power of employment agencies to enter into the character of contract which would obligate the applicant to pay a fee for a full time position when he was first sold a temporary position.

Second: The act certainly does not contemplate that forever after a position is secured for the applicant by employment agency, this agency may follow and enjoy increased income received by the applicant by reason of his intelligent attention to his duties.

Third: The Supreme Court of this state in the case of *Industrial Loan and Investment Co. vs. Superior Court of California*, reported in 189 Cal. 546, declares such an agreement on the part of applicant to waive in advance his rights to exemption from attachment or execution would be a void contract. (Rendered December 20, 1924.)

6. Nurses' Registries who are members of the California State Nurses' Association do not come within the purview of the Employment Agency Act.

Question: Are the official nurses' registries of the California State Nurses' Association employment agencies within the meaning of section 1 of the Employment Agency Act?

Opinion: My understanding is that the nurses' registries to which you refer are conducted by the different branches of the California State Nurses' Association, a corporation organized for the benefit of professional nurses and not for financial profit. These organizations are very much the same character as would be similar organizations of physicians, and attorneys, and are also comparable to labor union organizations. So long as they limit their activities to their own membership and do not hold themselves out publicly as employment agencies it would appear that they do not come within the scope of the Employment Agency Act of this State. (Rendered February 20, 1926.)

REPORT ON THE MEXICAN LABOR SITUATION IN THE IMPERIAL VALLEY.

SAN FRANCISCO, APRIL 2, 1926.

HON. WALTER G. MATHEWSON, Commissioner,
Bureau of Labor Statistics,
State Building, Civic Center, San Francisco, California.

SIR: In compliance with your verbal instructions, I visited the Imperial Valley between March 3d and 12th for the purpose of ascertaining, as accurately as possible, the following facts:

First—Whether there has been a shortage of labor in the planting and harvesting of crops of the valley during the last season.

Second—Whether a shortage of labor is anticipated by the growers during the harvesting of the crops in 1926.

Third—Whether the plan of registering Mexican workers by the Associated Labor Bureau is likely to relieve the labor situation in the Imperial County, and

Fourth—Whether the plan of registering the Mexicans residing in the Imperial Valley is in any sense a violation of the labor laws of our state.

The Meaning of "Shortage of Labor."

Since the pivotal point of my investigation was the question of the demand and supply of labor in the Imperial County, it is desirable, in the interest of clear thinking, to define the term "shortage of labor." From the practical as well as the theoretical points of view a shortage of labor means one thing to the individual farmer or grower, and another thing to the community as a whole. When trading is brisk and prices are good, the individual grower is eager and anxious to harvest his entire crop at a time when prices are highest. If, because of his inability to secure sufficient help, the grower can not harvest his entire crop at the most propitious and profitable time, he feels that he is suffering a financial loss which he considers equivalent to the total value of his crop at the prevailing good prices. Estimates of losses because of labor shortage are too often arrived at by the simple expedient of multiplying the entire crop by the best quoted prices. Such estimates are wrong because they are based upon the fallacious assumption that the same prices would obtain even if the entire crop had been thrown upon the market. The loss which some individual may suffer as a result of his own inability to harvest his crop does not indicate a loss to the community as a whole. The market demand for the commodity might be fully satisfied without the crop of one or several growers, and the total money return for a partial crop might be greater than would be the total money return for the whole crop had it been completely harvested and marketed.

"Shortage of Labor" in Thinning Lettuce in 1925.

Many growers in the Imperial Valley told me that during the months of September, October, November and December they experienced a

shortage of labor in the thinning of lettuce and the picking of cotton. Among those who reported a shortage of labor in the thinning of lettuce were the following:

	<i>Number Short</i>
1. Gardener and Cuff-----	16 men thinning lettuce.
(Cultivate 250 acres of lettuce; 80 acres of alfalfa.)	
2. Earl Fruit Company-----	30 men thinning lettuce.
(Cultivate 300 acres lettuce; 400 acres cantaloupes.)	
3. Jack Bros. and McBurney Co.-----	"Short on all crops."
(Cultivate 660 acres lettuce; 745 acres cantaloupes.)	
Number not stated.	
4. Sears Bros. and Company-----	50 men thinning lettuce.
(Cultivate 100 acres lettuce; 220 acres cantaloupes.)	
5. S. A. Gerrad Co.-----	"Short last November."
(Cultivate 1995 acres lettuce and cantaloupes.)	
6. Will S. Fawsette-----	"Short during rush season."
(Cultivate 400 acres lettuce; 700 acres cantaloupes.)	
7. Howard P. Fetes-----	"Short September and October, 1925."
(140 acres of lettuce and cantaloupes.)	

Among the growers who reported that there was no shortage of labor are the following:

1. Robert E. Leahy Co. Inc.
(Cultivate 500 acres of lettuce; 150 acres of cantaloupes.)
2. Peppers Fruit Co.
(Cultivate 227 acres of lettuce; 904 acres cantaloupes.)
3. Ben Askerman & Co.
(Cultivate 120 acres of lettuce; 170 acres grapes; 320 acres cantaloupes.)
4. Miller and Cummings.
(Cultivate 800 acres of lettuce; 1600 acres of cantaloupes.)
5. Cochrane and Hunter Co.
(Cultivate 160 acres of lettuce; 80 acres of cantaloupes.)
6. Youmen & Co.
(Cultivate 220 acres of lettuce and 350 acres of cantaloupes.)

Although many growers and other persons I interviewed told me that the Imperial Valley had experienced a shortage of labor in the thinning of lettuce, there are no indications at the present time that the lettuce crop has suffered as a result of the supposed shortage. In 1925 the lettuce growers shipped 9,851 carloads of lettuce, compared with 9840 carloads shipped in 1924. The shipments in 1926 will most probably exceed the shipments of 1925. From the information I have been able to gather, I would say that the smaller growers had suffered most by a lack of plentiful supply of Mexican labor during the months of September, October, November, and December, 1925. The larger lettuce growers were more willing and ready to pay better wages and were thus able to get all the workers they wanted. The prevailing rates of wages for Mexican labor in the Imperial Valley is \$3 per day. During the months of the supposed shortage wages rose in rare cases to as high as \$4 or \$4.50 per day, which the growers considered outrageous and unreasonable prices for labor. Where the thinning of lettuce was done on contract, some growers had to pay as high as \$9 per acre as compared with \$6 when labor was plentiful. Although

the lettuce growers did not have the usual plentiful supply of labor during the fall and winter months of 1925, the work of thinning lettuce was nevertheless finished at the cost of a higher price for labor.

Shortage of Labor in the Picking of Cotton.

In the harvesting of cotton, there has been a genuine shortage of labor in the Imperial Valley. After the harvesting of the cantaloupes and melons, in the middle of July, the Mexican workers leave the valley for Kern, Kings, Fresno, San Joaquin and other counties to harvest apricots, prunes, grapes, peaches, cotton, and other crops. There is practically no work in the Imperial Valley between the middle of July and about the middle of September when the planting of lettuce begins. The migratory Mexican families return to the Imperial Valley for the planting and thinning of lettuce and the picking of cotton in the fall of the year. Of course, many of the migratory families who find their way in the interior of our state never return to the Imperial Valley. Better wages, better living conditions, and better working conditions are the inducements for many Mexican families to remain either in our cities or in the rural districts of the inland counties of our state. It appears that during last fall a perceptibly smaller number of Mexicans returned to the Imperial Valley. Practically everybody I interviewed explained this supposed permanent exodus of the Mexicans from the valley by the fact that the U. S. immigration authorities were especially active in Imperial County during the year of 1925 in the apprehension of Mexicans who entered this country illegally. I was told repeatedly that the raids which the U. S. Immigration Patrol Service made on cotton and lettuce ranches scared the Mexicans permanently away from the Imperial Valley. These raids were in the opinions of many persons responsible for the shortage of labor in the cotton fields of the valley.

Whatever the effects of law enforcement activities of the U. S. Immigration Patrol Service, the reasons for labor shortage in the cotton fields of the Imperial Valley are more fundamental than the raids on Mexicans. The reason for the inability of the cotton growers of the Imperial County to secure sufficient workers to harvest their cotton crop is that they could not afford to offer the same wages and working conditions as the cotton growers of the San Joaquin Valley.

The growing of cotton in the Imperial Valley, if present conditions maintain, will probably be discontinued entirely. In 1924-25, the cotton acreage in the Imperial Valley was 64,000; in 1925-26 it declined to 46,800, a drop of 17,200 acres, or 26.9 per cent. During the same period the acreage in the San Joaquin Valley increased from 37,000 to 98,000, which is an increase of 61,200 acres or 164.9 per cent.

This decline in acreage in the Imperial Valley and the increase in acreage of cotton in the San Joaquin Valley is explained by the greater productivity of cotton in the latter valley. The average yield per acre of cotton in the San Joaquin Valley is more than twice as great than in the Imperial Valley. Thus, the average number of pounds of cotton per acre for the years 1923, 1924, 1925, secured by growers in the San Joaquin Valley was 458 compared with 221 pounds per acre in Imperial County. These figures, prepared by the California Development Association, show the superiority of cotton production in the

San Joaquin Valley; they point to the probable further decline in the cotton production in Imperial Valley.

The California Development Association estimates that the cost of production per pound for the yield in the San Joaquin Valley is 13 cents. Since the yield in the Imperial Valley is less than half that of the San Joaquin Valley, the cost of production per pound of cotton in the Imperial Valley is undoubtedly very much greater than in San Joaquin Valley.

Owing to the differences in the productivity of the soil in the two valleys, the growers of the Imperial Valley could not pay as good wages as the growers in the San Joaquin Valley, and the Mexican cotton pickers chose to remain in San Joaquin Valley where the quality of cotton was better and the earnings correspondingly higher. Under the circumstances it will become increasingly more difficult for the cotton growers of the Imperial Valley to secure workers to harvest their cotton crop.

Housing Conditions.

Not only were the wages offered to the Mexican cotton pickers better in the inland counties, but the housing which they could secure in counties outside of the Imperial Valley was also much better. The growers of the Imperial Valley have heretofore made no efforts to protect the health and decency of their Mexican workers. They have made no provision for the housing of Mexican families. Instead they have encouraged them to put up squatty and filthy shacks on their ranches. In many instances the Mexicans pitch insanitary tents alongside the main water ditches of the valley.

Health and decency under such living conditions are inconceivable. Many Mexican families who could find relief in the inland counties from the dirt, flies, vermin and filthy water on the ranches of the growers of the Imperial Valley remain in those counties which afford them better living conditions in addition to better wages.

That conditions of housing in the Imperial Valley were bad at the time of my visit is further corroborated by the fact that soon after my visit the Immigration and Housing Commission started a number of criminal prosecutions in Imperial County against violators of the State Housing Act.

The growers of the Imperial County have begun to realize that better housing conditions will have to be furnished to the Mexican workers to insure a better and steadier supply of men to harvest their crops. The Associated Chambers of Commerce of the Imperial County have appointed a committee to study and devise plans for better housing. The committee is now at work; it needs greater impetus and inertia.

The Associated Labor Bureau.

In order to insure a plentiful supply of Mexican workers the growers in the Imperial Valley organized the Associated Labor Bureau. The plan and purpose of the Associated Labor Bureau is stated in the following two circulars:

ASSOCIATED LABOR BUREAU OF IMPERIAL VALLEY.*To the Employers of Mexican Labor in Imperial Valley:*

You have been greatly damaged by the shortage of Mexican labor at different times. You, along with the rest of us, have sometimes blamed the immigration officers for their methods of enforcing the law. The Associated Labor Bureau, composed of most of the large employers of this class of labor, offers you a way out. The law provides that all aliens in this country who have not made legal entry are subject to deportation. This law must be enforced. A large percentage (nobody knows just how large) of the Mexicans in the Imperial Valley have not complied with the formal requirements and continued efforts at enforcement on the present basis mean uncertain and disturbed labor conditions, with greater shortages than in the past; greater turnover; higher wages, poorer work and, all told, a large increase in the expense for labor.

Here is the way out. The Immigration Service suggests that the employers of labor help to enforce the law and it will, in turn, cooperate with the employers to make this enforcement cause as little trouble as possible. If the enclosed understanding is signed by the employers of laborers, it will greatly assist in the enforcement of law and decrease the disturbance of laborers.

The plan is to register all Mexicans who can read Spanish or English, to arrange for them to get satisfactory evidence of their Mexican birth and to allow them to accumulate funds on the installment plan to pay the consular fee and head tax. Note that the laborer—not the employer—is to pay this. The employer is, however, to urge his men to make the payments. When the total of \$18 has been collected the alien will be taken to Calexico and will apply for legal entry. He will then secure a certificate which will entitle him to stay here without being disturbed by the Immigration Service.

Tell your Mexican employees in a friendly fashion that this movement is being made to protect them from annoyance and trouble and to make it possible for them to keep on working in California and in the United States. The original registration should be made at Calexico chamber of commerce office, 133 Paulin street; Brawley, at 149 Sixth street, or El Centro, 139 North Fifth street, as soon as possible. The installment payments may be made at any time after the registration and may be made at any bank in Imperial Valley. The Mexican who does not have a pass book paid up to date will be subject to deportation. If your laborers are not carrying pass books showing payments up to date, you should at once see that they register and that they make their payments every week.

We enclose the understanding with the immigration officials as drafted by I. F. Wixon, Chief Supervisor of the Immigration Service, for your signature. Kindly sign this and return to us at your very earliest convenience. We also enclose an English translation of the circular which we are trying to put in the hands of every Mexican laborer in the valley.

If we, the citizens of Imperial Valley, will perform our part of the understanding in good faith, we are assured of the same good faith and friendly cooperation from the officials of the Immigration Service.

Working together now we can do more at once in this fashion to stabilize and improve the labor situation than has ever before been possible. If we do not do it our labor supply will be greatly diminished and disaster will stare us in the face. Employers who do not enter into this understanding with the United States must necessarily take their own chances of continued periodic raids on their labor force in the present fashion.

Do not delay returning the enclosed understanding and do everything you can to help yourself, the valley, and the Immigration Service, to effectively work out this phase of the labor problem.

The above understanding applies only to Mexicans in the United States.

ASSOCIATED LABOR BUREAU,
By C. B. MOORE, Manager.

(Letterhead of the Associated Labor Bureau of Imperial Valley.)

To Mexican Laborers:

United States immigration officers have found it necessary to pick up and return to Mexico many Mexicans employed on ranches in the Imperial Valley because they have not been admitted to the United States.

The United States immigration laws require that all persons who are not citizens of this country, coming here to remain or take up employment, must obtain an immigration visa from an American Consul and be admitted at regular ports of entry by United States immigration officers. **YOUR EMPLOYERS WANT TO ASSIST YOU TO COMPLY WITH THE LAW, SO THAT YOU CAN REMAIN HERE AND WORK**, and have arranged a plan which will make it easy for you to comply with the law and enable you to continue in your employment.

This is the plan: All who have not met the requirements will register at Brawley, at 149 Sixth street; El Centro, at 139 North Fifth street, or Calexico, at chamber of commerce, as soon as possible, with the secretary of the Associated Labor Bureau. When you appear at one of the above places to register, you must:

1. Arrange to secure papers showing the place where you were born.
2. Demonstrate that you are able to read in some language.
3. Present six small photographs of yourself.
4. Pay an initial installment to apply on the consular fee and head tax at the nearest bank.

You will then be given a pass book with which you can go to ANY bank and make additional weekly payments.

The cost of the immigration visa is \$10, and the head tax fee is \$8 for all aliens over 16 years of age. Children under 16 years of age are not required to pay a head tax, but must obtain an immigration visa.

When you have deposited \$18 for yourself, and a similar amount for each member of your family over 16 years of age, if you have a family in the United States, you will go to the American Consul and obtain an immigration visa and then apply at the United States Immigration Office for admission. The secretary of the Associated Labor Bureau will assist you in every way that he can to arrange for your lawful admission. When you have been admitted, you will be given a paper showing that you have a right to be in the United States, after which you can go back and forth between Mexico and the United States without any trouble.

The deposit of funds can be made at ANY bank in ANY town in the Imperial Valley, and if you go from one town to the other you will not lose any money, and can make the next payment in the nearest bank. Remember that your money is absolutely safe and that there is no danger of your losing it, because, if, for any reason you can not be admitted to the United States, it will be refunded to you.

Ask your boss when and where to register. If you do not understand the plan fully, the secretary of the Associated Labor Bureau will be glad to give you all the information that you want. You should hurry and take advantage of this opportunity, for unless you have been lawfully admitted to the United States to work you are subject to deportation and may be returned to Mexico at any time.

ASSOCIATED LABOR BUREAU.

The three registration offices of the Associated Labor Bureau were in operation only about three weeks at the time I visited the Imperial Valley (March 3d-12th). By that time about 300 Mexicans had already registered under the plan outlined in the preceding circulars.* By that time also there had already come to my attention signs of irregularities in the administration of the plan of registration. I am inclined to believe that sufficient care was not taken to make certain not to collect any money from those Mexicans who were not subject to deportation. For instance, eighteen dollars each were collected from Sr. Jose O. Reys, Sr. Francisco Reyes and Sra. Francisca Saprín in spite of the fact that these three persons had resided in the United States since 1907 and were not subject to deportation. When the cases of these three persons came to the attention of Sr. Carlos V. Ariza, Consul of Mexico at Calexico, he interceded on their behalf and succeeded in having the money refunded to them by Mr. C. B. Moore,

* On July 30, 1926, as many as 6500 Mexicans were registered by the Associated Labor Bureau. (From letter to Stanley M. Gue, Deputy Labor Commissioner, under date of July 30, 1926, signed by C. B. Moore, Manager of the Associated Labor Bureau.)

manager of the Associated Labor Bureau. Since these irregularities took place, I received a letter from Sr. Ariza in which he called my attention to apparent other irregularities in the administration of the plan of registration. This letter follows:

(COPY.)

Calexico, California,
March 22, 1926.
No. 311.
File: 7/6.
Sub: Immigration.

Dr. Louis Block,

928 Sun Finance Building, Los Angeles, California.

Dear Mr. Block: Referring to our conversation and your kind visit of recent date at this consulate, I am sending you herewith copy of letter which I sent Mr. C. B. Moore, of the Associated Labor Bureau; mentioned letter is self-explanatory and I hope that it will enable you to take some steps to make a further investigation of the procedure of the above mentioned bureau in regard to the Mexican laborer immigrants in whom you take so kind and great interest.

I expect to have a meeting with Mr. Robbins of the Immigration Department and Mr. Moore of the Associated Labor Bureau next Tuesday morning, and from that meeting I will be in a position to know if it is advisable to take steps to entirely bar the registration of my people. In case I consider it more convenient to stop mentioned procedures, I will immediately communicate with you and hope that your kind cooperation will help this consulate in behalf of the thousands of poor laborers in whom we take such human interest.

Believe me, dear Mr. Block,

Very sincerely yours,

(Signed) CARLOS V. ARIZA,
Consul of Mexico.

(COPY.)

Calexico, California.
March 20, 1926.
No. 310.
File: 7/6.
Sub: Immigration.

Mr. C. B. Moore,

Associated Labor Bureau,

Chamber of Commerce, Calexico, California.

Dear Mr. Moore: In regard to the work being carried out by the Associated Labor Bureau in respect to Mexican labor immigrants throughout Imperial Valley, I beg to call your attention to the fact that according to information received at this consulate, and which I have investigated, and which appears to be true, there are numbers of Mexicans who are being obliged to make deposits for immigration visa, head tax and other expenses which in my opinion in many cases are unnecessary.

I may state that on the 12th inst. Mr. Gue, of the Bureau of Labor of California, and I made some personal investigations at your Brawley office as to the way in which the deposits were being conducted, and to my surprise found that in most cases the Mexican laborers and their families had been taken to Brawley by their employers and compelled to make deposits at said office, or either get books to make deposits at different banks. It also appears that deposits and registration of these people is made without previously getting any data as to their legal admittance or right to be in this country. I inquired from your employee at Brawley if he did not find out beforehand whether all those people were really obliged to pay or make deposits for immigration. I also asked him for records of such data, but he was unable to furnish me such information, advising me that the only thing that concerned him was taking their names, giving them their books, taking their deposits or letting them make same, regardless of whether they had paid their immigration fees and regardless of the time that they had resided in the United States, whereas in many cases this period is far beyond five years, which I understand gives them the right to continue to live in the United States without being liable to deportation.

I may also state that I can cite some cases in which the Mexicans have not willingly made any such deposits, and other cases in which, not having funds to make same, these are paid by their employers, the amounts to be discounted from their wages. This procedure, it is my understanding, is prohibited by the labor laws. I will mention the name of one Ponciano Barrera, whose registration book is No. 94, and his wife, Victoria de Barrera, whose registration book is No. 95, from which books it appears that a sum of \$18 was paid, but as a matter of fact, according to our information, these amounts were to be deducted from their wages. This in itself would perhaps be sufficient ground to have the Bureau of Labor take steps to bar such procedures.

A number of Mexicans also complain that police officers of Brawley, sheriffs, their employers, and other people have threatened them with jail terms, discharge from work and deportation if they do not comply with taking out their immigration papers. These claims, I will say, are brought before my office in great numbers and almost every day. Many of these complaints are against Sr. Genaro Gonsales, who, the Mexicans claim, does not thoroughly investigate as to the number of years they have resided here, or whether they have already paid their head tax, but only makes them leave their deposits or take the same to banks, and also advises them not to come to this consulate for information as to the advisability of making deposits for immigration.

The following names are of people who have made deposits and who were not in need of so doing:

Nicholas Meza, Book No. 609—Brawley, California. Registered June, 1916.

Paulino Carpio, Book No. 614—Brawley, California. Has resided in the United States for seventeen years.

Doroteo Ramirez, Book No. 611—Brawley, California. Registered September, 1916.

Antonio Delgado, Book No. 616—Brawley, California. Registered in 1907. Paid \$18.

Librado Corral, Book No. 810—Brawley, California. Registered 1911. Paid \$18.

After these people presented their claims at my office, I instructed the vice consul to take steps to see that the plaintiffs were reimbursed of the mentioned amounts, some of these appearing to be full payments of \$18, wherein it strikes me that if already deposited, they should have obtained their corresponding visas and head tax documents, and it should not be necessary to have same taken care of at a later date.

In view of the facts herein, and desiring to see that my people, who are not legally here or who have resided in the United States less than five years, pay their head tax, I will state that my cooperation with you will be unlimited, but I will also state that as I show you from the facts herein that many cases are not being accorded the treatment that they should receive, it is my duty to request you to consider new plans for having these people make their immigration deposits. For example (and this I am strongly in favor of), that every party appearing before you should first establish their legal admittance and right to be in this country at the immigration office before being required to make deposits of any kind. This, in my opinion, is the only possible solution of the embarrassing situation in which I find myself through the practices carried out up to this date with my people.

I am taking steps before the Mexican embassy at Washington requesting instructions as to the advisability of letting the Associated Labor Bureau continue their present procedure, or on the other hand take steps through the newspapers and other sources to bar this work, so an early interview with you on these matters undoubtedly will be of great help to your office as well as mine.

I have taken this up verbally with Mr. Harmuth and have explained a number of things to him which I would be glad to take up with you in order to avoid possible misunderstanding and to reach a convenient agreement beneficial to my people as well as the institution you represent. I will take this up with Mr. Robbins of the Immigration Department and hope that my suggestion in regard to having the Mexican immigrants first go to his office and then to you will be accepted by him as I sincerely think this is the only way to find a satisfactory solution of the existing situation.

Respectfully,

(Signed) CARLOS V. ARIZA,

Consul de Mexico.

At the time of my visit to the Imperial Valley there was no evidence of deductions from wages such as is cited in Sr. Ariza's letter. Had

I found such evidence, I would have taken immediate steps to prevent its reoccurrence, since such deductions would be in violation of the wage laws of our state.

On the whole, I am of the opinion that the plan of the U. S. Immigration Service and the Associated Labor Bureau of registering the Mexicans who have entered the country illegally was ill conceived and should not have been undertaken. My reasons are these:

First—The plan does not offer an assurance that in the future the illegal entry of Mexicans will not continue at the same rate as heretofore.

It has been estimated that approximately 75 per cent of the Mexicans now in California have entered in the United States illegally, that is without paying the visa fees and head taxes, and, which is more important, without having passed the physical (health) examinations and the literacy test. No one knows exactly what proportion of the Mexicans now in California entered this country illegally. But if the 75 per cent estimate is correct, it is also true that not all of those who have entered illegally are subject to deportation, for the reason, as will be seen in the next section of this report, that a large number of our Mexicans have lived in this country long enough to make them legal residents. Whatever the situation regarding the deportable Mexicans, I have not been able to discover any evidence of stricter enforcement of the immigration laws on the Mexicali border, and the consensus of the opinions of those I interviewed was to the effect that Mexicans are now entering the U. S. at Mexicali, illegally, at the same rate as they had prior to the inauguration of the present plan of registration.

The plan of registration does not provide for the exclusion of those who are now entering illegally. In fact, it seems to give official sanction to the continuous uninterrupted illegal entry of Mexicans.

No one in the valley seems to know definitely how long this plan of registration will be in effect and how long the faithful officers of the U. S. Immigration Patrol Service will be held in the leash.

Second—The present plan of registering the Mexicans who have entered illegally does not seem to have the official sanction of the United States Department of Labor.

While it is understood, as shown in the circular to the employers of Mexican labor quoted above, that Mr. I. F. Nixon, Chief Supervisor of the Immigration Service, has agreed to the plan of enabling the Mexicans to pay out their visa fees and head taxes in installments, the Mexican laborer who pays the first installments of one or more dollars is not guaranteed legal immunity from deportation. The tacit understanding between the employers of the Imperial Valley and the U. S. Immigration Service, I take it, might be abrogated at any time. By registering with the Associated Labor Bureau, the Mexican laborer, in effect, gives self-incriminating evidence, sufficient to justify the U. S. immigration authorities to deport him.

The Mexican laborer is told upon registering that he must pay the entire eighteen dollars as soon as possible, but that as long as he has the registration pass book he will not be molested. If he is a family man, he might have to pay much more than eighteen dollars, as he might have to pay for himself and his wife and for some of his children.

How long it might take many of the impoverished Mexicans of the Imperial Valley to save up enough money to legalize their entrance in the United States no one can tell with any degree of precision. Many of them, I feel sure, will probably never save up that much money. Again, it does not seem fair, in view of the fact that the registration plan does not have the formal official sanction of the U. S. Department of Labor, to assure the registrants that their pass books showing that they have made partial payments on account will protect them against deportation.

It is perfectly safe to state that by far the preponderant majority of the illegal entrants would be able to escape the vigilance of the U. S. Immigration Patrol Service and would not have been deported anyway. The remedy against the violation of the U. S. Immigration Laws lies in vigilance at the ports of entry rather than in deportations. That this is so will be more readily conceded when it is remembered that the only punishment for illegal entry is deportation and that therefore many take the chance of smuggling themselves into our state.

Third—No provision has been made for the disposition of the money which will accrue as a result of partial and incompletd payments on account.

Under the plan of the Associated Labor Bureau, the money which the Mexicans pay on account is credited to that bureau, not to the illegal entrants. While the registrant may make deposits in any of the banks of Imperial County, he can not withdraw any of his money thus deposited.

In the cases cited in a foregoing paragraph, where money was collected from Mexicans who had been in the U. S. since 1907, the \$54 was refunded to them through Mr. Moore, secretary of the Associated Labor Bureau. It could not be withdrawn by the Mexicans themselves, even though they had their pass books showing that they had themselves deposited their money in the bank.

It is an acknowledged fact that the Mexican laborers entering California thru the Imperial Valley or otherwise, migrate at certain months of the year to the inland counties of our state and that many of them remain there. The Mexicans are essentially *migratory laborers*, probably the largest number of them without homes and families. Unquestionably, a considerable number of those who will make only partial payments on account of the required eighteen dollars will be lost sight of. Their money will probably remain in the hands of the Associated Labor Bureau or will remain in the banks as unclaimed accounts.

Fourth—The plan of registering the Mexicans does not seem to be well administered.

I recognize the fact that the registration offices of the Associated Labor Bureau were only in operation about three weeks when I visited the Imperial Valley and that mistakes are likely to be made in the best of offices. It generally takes some time before new machinery can be made to work smoothly. Therefore, the instances of abuses cited in Sr. Ariza's letter might not occur in the future and only those who are subject to deportation will be registered by the Associated Labor Bureau. But since the future of these registration offices is uncertain and the possible duration of their activities unknown, one seems to be

justified in entertaining apprehensions regarding the desirability of the plan from the standpoint of proper administration.

Most of the Mexicans in the Imperial Valley are poor and illiterate. It will be difficult to avoid misunderstandings when working with them, even though the men in charge of the registration offices are able to speak Spanish. I am inclined to believe that the mistakes committed by these offices in registering Mexicans not subject to deportation are due to the inability of the Mexicans to understand the plan of the Associated Labor Bureau rather than to the novelty of the plan itself.

Fifth—The plan of registering the illegal entrants is a makeshift which is likely to result in a temporary blind to enable other Mexicans to enter illegally.

The growers of the Imperial Valley sponsored the plan of permitting the Mexicans to pay out their \$18 on the installment plan in order to stay the raids by the U. S. Immigration Patrol Service and in order to insure a permanent and plentiful supply of Mexican labor in the planting and harvesting of their crops. One wonders what assurance the growers have that the Mexican who has paid his visa fee and head tax will remain a permanent resident of Imperial County. There is no Chinese wall around the Imperial Valley and work and wages can be obtained by moving inland. Why will the Mexican laborer forego the opportunity of earning wages in the other counties of our state after he has secured his passport and become a legal resident of the United States? The answer seems to be that the growers of the Imperial Valley do not expect all of the Mexicans who come in through the Imperial Valley to remain there. They probably hope to get plenty of them in, so that enough will remain in the Imperial Valley to insure them a plentiful supply of labor at "reasonable wages." If the registration plan can be made to last long enough, and if in the meantime the U. S. Immigration Patrol Service will suspend its raids, the plan of the Associated Labor Bureau will serve as a blind to enable the unhampered influx of Mexican workers in the State of California.

If all the Mexican workers who enter through the Imperial Valley would remain there, the problem would be how to get rid of them rather than how to retain them. The social problems of dependency, disease and crime, already an important factor in Imperial County, would be so augmented as to cause serious concern to the thinking and responsible citizens of the community.

In my humble opinion it would have been far better for the growers of the Imperial Valley to establish decent housing and to pay fair wages to insure a permanent and contented supply of Mexican workers, than to embark upon the doubtful scheme of legalizing the illegal entry of more Mexican laborers.

The Number of Mexicans Now in Imperial County.

Accurate statistics showing the number of Mexicans now in Imperial County are not available. The United States census of 1920 enumerated 6414 Mexicans in Imperial County. This number constituted about 14 per cent of the total population of that county. But since that time the population of Imperial County has increased considerably,

and the El Centro Chamber of Commerce estimates the present total population of the county at 65,000.

In order to secure a basis upon which to estimate the present Mexican population of the Imperial Valley, I arranged for the taking of a census of the elementary and secondary population of the county. This census was taken with the cooperation of Mr. H. C. Coe, Superintendent of Schools of Imperial County, and was quite complete. The result of this census is shown in the two following tables:

TABLE 52—Total Number and Per Cent of Children Enrolled in March, 1926, in all the Elementary Schools of Imperial County, by Nationalities of Children and by their Countries of Birth.

(From Census taken by H. C. Coe, Superintendent of Schools of Imperial County in cooperation with the Bureau of Labor Statistics of the State of California.)

Number of Children Enrolled in the Elementary Schools as of March, 1926.

Nationalities	Total		Born in United States		Foreign-born	
	Total	Percentage distribution	Number	Per cent of total	Number	Per cent of total
Total.....	9,210	100.0	7,634	82.9	1,576	17.1
Whites*.....	5,253	57.0	5,194	98.9	59	1.1
Mexicans.....	3,059	33.2	1,575	51.5	1,484	48.5
Negroes.....	451	5.0	451	100.0		
Orientals.....	363	3.9	342	94.2	21	5.8
Others.....	84	.9	72	85.7	12	14.3

*In the Imperial Valley, Americans and foreign-born whites are referred to as "whites" in contradistinction to Mexicans, or Orientals, or Negroes.

TABLE 53—Total Number and Per Cent of Pupils Enrolled in March, 1926, in all the High Schools of Imperial County, by Nationalities and Countries of Birth of the Pupils.

(Census taken by the Superintendent of Schools of Imperial County in cooperation with the Bureau of Labor Statistics of the State of California.)

Number of High School Pupils Enrolled in March, 1926, in Imperial County.*

Nationalities	Total		Born in United States		Foreign-born	
	Total	Percentage distribution	Number	Per cent of total	Number	Per cent of total
Totals.....	1,336	100.0	1,257	94.1	79	5.9
Whites.....	1,163	87.1	1,158	99.6	5	.4
Mexicans.....	101	7.6	35	34.7	66	65.3
Negroes.....	34	2.5	34	100.0		
Orientals.....	28	2.1	22	78.6	6	21.4
Others.....	10	.7	8	80.0	2	20.0

*The following high schools of Imperial County are included: McCabe Union, Central Union, Brawley Union, Holtville Union, Calexico High School, East Side Branch, C. U. H. S.

Note—The percentages based upon numbers less than 100 are not significant and should not be quoted separately from the numbers.

It will be seen from Table 52 that 33.2 per cent of all of the children in the elementary schools are Mexican children, and that the total number of elementary school children is 9,210. According to the U. S. Census of 1920, the ratio of school children between the ages of 5 to 15 years to the total population of the State of California was 17 per cent, and in 1910, the ratio was 16.2 per cent. If we assume that the same ratio obtains at the present time in Imperial County, and taking the elementary school population to be between the ages

of 5 to 15 years, we have a basis of obtaining a rough stimate of the present population of the Imperial Valley. If 9,210 elementary school children are 17 per cent of the total population of the Imperial Valley, then the total population of the Imperial Valley is in round figures 54,200. This figure is 10,800 below the estimate made by the El Centro Chamber of Commerce.

Since 33.2 per cent of all the school children are Mexican children, we might assume that 17,994 or that 33.2 per cent of the total estimated population of 54,200 are Mexicans. This estimate is based upon the two assumptions that (1) the Mexican children attend school in the same proportion as the children of the "white"* population and that (2) the sizes of the families of the "whites" and Mexicans are the same. Both of these assumptions are probably erroneous, and for this reason the errors involved in the estimated are compensative rather than cumulative and the estimate is most likely fairly accurate. It is more likely that the estimate of 17,994 Mexicans residing in the Imperial Valley is rather conservative, for the reason that the greater majority of the Mexicans in the county are single. This is true of all immigrant groups and is unquestionably also true of the Mexicans in California. In this connection, I should point out that according to the information I gathered, one American cotton growing company imported during the years 1922 and 1923 from 10,000 to 12,000 Mexicans. These were imported from interior states of Mexico to work on the company's land in Mexicali, but thousands of these single laborers found their way in Imperial County and in other parts of California.

The month of March, when the school census was taken, is not a time when there is much work in Imperial County, and for this reason it may be assumed that about 18,000 Mexicans reside permanently in the valley. Of this number probably half are workers upon whom the farmers and growers can depend to do their work at all times of the year. A much larger number of Mexican workers come to the Imperial Valley in the months of May, June, July, to harvest the cantaloupes and melons.

The growers in the Imperial Valley did not have any shortage of labor in the harvesting of cantaloupes last year; neither do they expect a shortage of labor this year. Practically all the growers I interviewed told me that the Mexicans are glad to harvest the cantaloupes because they can make pretty good wages at it, about \$5 or \$6 per day. At the height of the harvesting season in the Imperial Valley, probably not more than 15,000 Mexicans are employed. And during slacker months of the year, it is estimated that not more than about 5000 Mexicans are needed in the valley to do its agricultural work. At the present time there is unquestionably a surplus of labor in Imperial County.

Social Conditions.

Few employers of labor in Imperial County who are sponsoring the present plan of registering the Mexicans, and who are interested in unrestricted immigration, are seriously considering the social conse-

* In the Imperial Valley, Americans and foreign-born whites are referred to as "whites" in contradistinction to Mexicans, or Orientals, or negroes.

quences of a large influx of Mexicans in the valley. The following social facts relating to conditions in Imperial County are significant:

1. About one-third of the population of the county are Mexicans.
2. The Mexicans do not become Americanized and do not become naturalized.
3. The Mexicans live in separate quarters (the east sides of most towns of the valley are known as the Mexican quarters) and form little Mexicos throughout Imperial County.
4. The Mexicans in the Imperial Valley are already a burden upon the charities of the community, and the jails in most of the towns in the county are peopled largely with Mexican laborers.
5. The native children of the Mexican workers do not attend school as regularly as other children; few of their children reach the secondary schools of the county. (Tables 52 and 53 of this report show that while 33.2 per cent of all the elementary school children are Mexican, only 7.6 per cent of all the high school children are Mexican children.)

The Mexicans bring with them infantile mortality, housing and health problems, which threaten to become an increasing drain upon the charitable resources of the community.

I noticed, in the course of my survey, that while larger growers of cotton, lettuce, and cantaloupes are inclined to favor unrestricted immigration, the farmers of Imperial County who are permanent residents of the valley are much less inclined to favor such unrestricted immigration.

Summary.

1. The lettuce growers of the Imperial Valley experienced what they considered a labor shortage during the lettuce thinning season of 1925.

2. The "shortage" reflected itself mainly in higher wages which many growers were compelled to pay for the thinning of their lettuce. In many instances the thinning of lettuce was delayed, but the total crop of lettuce in 1926 will probably exceed the 1925 crop. There are no indications of financial losses as a result of the shortage of labor.

3. The cotton growers of the Imperial Valley have actually had serious difficulties in securing an adequate supply of labor for the harvesting of their crops. The reason for this lies in the lower wages and poorer working conditions which they offered in competition with the much more productive cotton acreage in San Joaquin Valley. It is not likely that the cotton growers will in the future be able to compete effectively with the cotton growers of the San Joaquin Valley.

4. The growers of Imperial County had no shortage of labor in the harvesting of their lettuce and cantaloupe crops (the major crops of the valley) in 1925. Neither do they anticipate a labor shortage in 1926.

5. About 35 per cent of the total population of the valley is Mexican. There are probably more than 18,000 Mexicans permanently residing in Imperial County. Of this number, about 9000 are always available to do the agricultural work of the community. During the peak agricultural season there are needed in the valley about 15,000 Mexican workers to harvest the crops. These workers were available in the past and will be available in the future, for the principal reason that

wages are better during the peak of the agricultural activities in the valley.

6. The plan of legalizing the illegal entry of Mexicans by registering them and enabling them to save up \$18 is a makeshift which is likely to cause more harm than good.

Respectfully submitted.

(Signed) LOUIS BLOCH.
Statistician and Chief Examiner.

PART II.

FLUCTUATIONS IN EMPLOYMENT AND WAGE
RATES IN MOTION PICTURE INDUSTRY.

THE MOTION PICTURE INDUSTRY.

The enabling act of the Bureau of Labor Statistics requires, as was pointed out in the introduction to this report, that it gather statistics of employment and wages in the various industries of the State of California. In compliance with the requirements of this act, the Bureau undertook a study of employment conditions in the motion picture industry in California.¹ Although the Bureau secured complete pay roll and employment data for about ninety per cent of the establishments in the industry, all of these data could not be incorporated in this report. However, in the following pages are presented adequate data on fluctuations of employment in the industry and on full-time weekly earnings of manual workers and office employees. The earnings of artists and actors were not tabulated in this report.

United States Census Data.

The growth and importance of the motion picture industry as judged by the value of its products alone is shown in Table 1, computed from U. S. census data:

TABLE 1—Summary Statistics for the Motion Picture Industry* in the United States. United States Census Data for 1919, 1921 and 1923.

Census year	Number of establishments	Average number wage earners	Wages	Cost of materials	Value of products	Value added by manufacture
1919.....	50	3,643	\$6,709,000	\$19,579,000	\$36,705,000	\$17,126,000
1921.....	127	6,259	14,740,000	31,190,000	77,397,000	46,207,000
1923.....	97	6,408	16,691,000	30,657,000	86,418,000	55,761,000

Census years	Per cent of increase or (—) decrease over preceding period.			
1919-1921.....	119.7	59.3	110.9	169.8
1921-1923.....	12.6	—1.7	11.7	20.7

* Not including projections in theatres.

The data in the preceding table relates to the industry throughout the United States and shows a remarkable gain between 1919 and 1923 in the value of the product of this industry. In 1923, the United States Census reported the "value of products" manufactured by 36 motion picture studios in Los Angeles to be \$34,611,414, which is 40 per cent of the total value of the product reported for the country as a whole. It would appear from these figures that the production of the motion picture studios in Los Angeles represents only 40 per cent of the total production of the United States.²

The number of firms included in the Bureau's study of employment and wages was also 36. The number of employees included in the pay rolls of these studios undoubtedly represents about 90 per cent

¹ A study of the lumber industry was also begun in 1924, but this study could not be continued during the biennial fiscal period covered by this report.

² This is an understatement of fact. The relative production in Los Angeles is undoubtedly much greater than 40 per cent; it is more nearly 90 per cent of the total United States production.

of the total number engaged in the industry. The following is a list of firms from whom the Bureau secured pay roll and employment statistics:

1. Metro-Goldwyn-Mayer Corporation.
2. Joseph M. Schenck Productions, Inc.
3. Cecil B. DeMille Pictures Corp.
4. Universal Pictures Corporation.
5. Famous Players-Lasky Corporation.
6. Samuel Goldwyn, Inc., of California.
7. Joe Rock Productions.
8. Douglas Fairbanks Pictures Corp.
9. Principal Pictures Corp.
10. Sierra Pictures, Inc.
11. Renand Hoffman Productions, Inc.
12. Jackie Coogan Productions, Inc.
13. Gerson Pictures Corp.
14. Great Western Productions.
15. Mack Sennett, Inc.
16. Corrine Griffith Productions, Inc.
17. Columbus Pictures Corp.
18. Warner Bros. Pictures, Inc.
19. Baird Beck Pictures Corp.
20. Bud Barsky Productions.
21. Kinemart, Inc.
22. Goodwill Comedies, Inc.
23. United Studios, Inc.
24. Sam E. Roth & Marion Fairfax Productions.
25. Hal E. Roach Studios.
26. Lloyd Hamilton Corp.
27. Lupino Lane Comedies.
28. Ragstrom Corporation.
29. Jack White Comedy Corp.
30. Metropolitan Pictures Corp. of California.
31. F. B. O. Studios.
32. Mary Pickford Company.
33. Harold Lloyd Corp.
34. Christie Film Co.
35. Wm. Fox Vaudeville Co.
36. First National Productions.

In addition to the data secured from these studios, the Bureau also secured pay roll statistics for the following laboratory firms:

- Rothacker-Aller Laboratories, Inc.
- Consolidated Film Industries, Inc.
- Technicolor Motion Picture Corp.
- Studio Film Laboratories.
- Cinemagraph Film Laboratories.
- Frank D. Williams Laboratories.
- Chester Bennett Film Laboratories.
- Wm. Horsley Film Laboratories, Inc.
- Ries Bros.
- Roy Davidge Film Laboratories.
- Westwood Productions and Laboratories.

The total number of employees included on the pay rolls of the 36 motion picture studios in Los Angeles was 8265. Of this number, 7225 or 87.4 per cent were males, and 1,040 or 12.6 per cent were females. In the 11 laboratories for which pay roll and employment statistics were secured, the number of employees, as of May, 1926, was 319, of which 248 or 77.7 per cent were males and 71 or 22.3 per cent were females. In both the motion picture studios and laboratories the number of employees on the pay rolls as of May 15, 1926, was 8584. Of this number 7473 were males and 1111 or 12.9 per cent were females. The number of firms which returned information on fluctuation in employment was, as will be seen in the subsequent tables, somewhat in excess of the number which reported only pay roll data.

The pay roll statistics included information for all persons employed on May 15, 1926. Some of the companies did not make returns for the executives; while others did report the salaries of the executives. All firms reported the earnings of the actors, but not the "extras," who are the casual workers of the industry.

In the data on full-time weekly earnings presented in subsequent tables, not all of the occupations reported on the pay rolls were included. The principal reason for this was that in this study the Bureau was primarily interested in the earnings of those who performed manual labor in the motion picture studios. The earnings of actors and actresses are not included in this report, as these data were not tabulated.

Fluctuations in Employment.

The most interesting and important fact revealed by the Bureau's study of employment conditions in the motion picture industry is the irregularity of employment in the industry. It is obvious that the captains of the motion picture industry have not as yet given sufficient thought to this problem. If the increased cost of production caused by irregularity of employment could be expressed in terms of dollars and cents, the sum would undoubtedly be so staggering as to enlist the interest of every motion picture producer. Such fluctuation in employment as is shown in the data presented in Tables 1 to 9 and in Charts I-III suggest costly labor turnover, irregular production and broken earnings by the workers engaged in the industry.

Miss Mary Van Kleeck, Director of the Department of Industrial Studies of the Russell Sage Foundation, who made a brief survey of conditions of employment in the motion picture industry, had the following to say concerning the irregularities of employment which she observed:

The significance of these fluctuations can be understood only by visualizing what they mean in the plant, and in the homes of the workers. To the worker it means loss of earnings which has the effect of reducing the cash value of his wage rate. To the plant, it means interruption in production and in efficiency. It increases both the costs of production and the occasions of friction in human relations. Like a headache in a human being, fluctuation in the weekly pay roll is a "presenting" symptom, which reveals something wrong somewhere.*

In Tables 2 and 2a are presented data for 16 identical motion picture establishments, all of which had operated during the years 1923, 1924,

* From "Outstanding Problems in Human Relations and Employment Conditions in the Motion Picture Industry in Hollywood," a preliminary memorandum submitted to Will H. Hays, president, Motion Picture Producers and Distributors of America, Inc., by Miss Mary Van Kleeck, September 25, 1924.

CHART I.

MONTHLY FLUCTUATIONS IN THE NUMBER OF EMPLOYEES IN 16 IDENTICAL MOTION PICTURE PRODUCING ESTABLISHMENTS, IN LOS ANGELES, DURING THE YEARS 1923, 1924, AND 1925.

(Note: "Extras" are not included)

and 1925. The figures shown in these tables have been graphically presented in Charts I to III, inclusive. A study of these figures shows that in the year 1923 these 16 firms employed the largest number of workers in June and the least number in December. In December the number of workers employed in these studios was 3511 compared with 5669 in June. In other words, the number of men employed in December was only 61.9 per cent of the number employed in June. The monthly average number of employees on the pay rolls of these 16 studios in 1923 was 4530. In June, 1923, the number employed was 25.1 per cent above this average; while in December, 1923, the number employed was 22.5 less than the average during the year. In 1924, the average monthly number of employees on the pay rolls of the same 16 studios was 4676. In this year the highest number of employees on the payrolls of these companies was in December, in which month the number of workers employed was 5681, or 21.5 per cent above the monthly average for the whole year. The number employed in February, 1924, was only 63.4 per cent of the number employed in December of that year.

Again in 1925, July and August were the peak months of employment, while January and March were the two lowest months of employment.

The curves shown on Charts I to III depict surprising irregularities in employment in the motion picture industry—irregularities, which by intelligent attention to the problem, could undoubtedly be greatly reduced. The problem of labor turnover has apparently not as yet been attacked by those who are steering the course of this important industry and who are responsible for the welfare of the workers engaged therein.

TABLE 2—Fluctuations in Employment in 16 Identical Motion Picture Studios during the Years 1923, 1924 and 1925.

Months	Total number of employees each month								
	1923			1924			1925		
	Male	Female	Total	Male	Female	Total	Male	Female	Total

(Bureau of Labor Statistics-State of California)

TABLE 2a—Fluctuations in Employment in 16 Identical Motion Picture Studios during the years 1923, 1924 and 1925.

Months	Percentages of total employees					
	1923		1924		1925	
	Per cent each month of maximum	Per cent each month is of average number employees	Per cent each month of maximum	Per cent each month is of average number employees	Per cent each month of maximum	Per cent each month is of average number employees
January.....	72.4	90.6	71.7	87.1	79.6	89.3
February.....	66.3	83.0	63.4	77.0	82.7	92.9
March.....	75.9	94.9	70.7	85.9	81.3	91.2
April.....	87.0	108.9	72.9	88.5	88.5	99.3
May.....	96.5	120.7	72.7	88.4	86.3	96.9
June.....	100.0	125.1	87.4	106.2	87.6	98.3
July.....	89.2	111.7	86.3	104.9	99.2	111.3
August.....	76.6	95.8	84.4	102.5	100.0	112.2
September.....	76.7	96.0	87.1	105.8	96.7	108.5
October.....	84.9	106.2	97.2	118.1	89.5	100.4
November.....	71.5	89.5	94.0	114.2	88.0	98.8
December.....	61.9	77.5	100.0	121.5	90.0	100.9

In Tables 3, 4 and 5, are presented data on fluctuations in employment in the same years as in Tables 2 and 2a, but in Tables 3, 4, and 5, the data are not for identical establishments. Thus, in 1923, 19 establishments reported on fluctuations in employment; in 1924, 21 establishments, and in 1925, 31 establishments reported. In these tables are also shown considerable differences in the numbers employed each month.

In 1923 (Table 3), June was the peak of production and December was the lowest month of production as is shown also in Table 2 for the 16 identical establishments. In 1924 (Table 4), the highest number of workers was employed in October and the lowest was employed in January and February. In Table 2 in which data are shown for 16 identical establishments, the peak month of employment was December and the lowest month was February. It will be seen, however, that in Table 2 there is little variation in the number of employees in October, November and December of 1924. The data on fluctuations in employment in 1925, as shown on the pay rolls of 31 motion picture studios, are given in Table 5. In this table, August is shown to be the greatest month of employment and March is shown to be the lowest month of employment or production.

TABLE 3—Fluctuations in Employment in 19 Motion Picture Studios in 1923.

In Tables 6, 6a, 7, 8, and 9 are shown data for motion picture laboratories. The large motion picture studios, for which employment data were presented in the preceding tables, have their own laboratories in which their films are developed, but the smaller motion picture studios have their films developed in motion picture laboratories not connected with their studios.

It will be seen from Tables 6 to 9, inclusive, that the same variations in the monthly number of employees are found in the motion picture laboratories. Considering the six identical laboratories, for which information has been secured for the three years of 1923, 1924 and 1925, it will be noted that in 1923, December was the month in which the largest number of workers were employed; in 1924, January was the highest month of employment; while in 1923, August was the highest month of employment.

There appears to be no regularity in the months in which the highest or the lowest numbers of workers were employed during the three

years for which data are shown in the tables on fluctuations in employment. The weather conditions, such as conditions of fog or rain, seem to have little to do with the irregularities of employment in the industry. The difficulties most probably lie in the lack of proper planning of production, especially as it affects the preparation of sets in the mechanical departments of the studios. As already suggested, great economies in the cost of production, and more regular earnings for the persons engaged in the industry, could be brought about by scientific attention to this problem.

(Bureau of Labor Statistics-State of California)

Full-Time Weekly Wage Rates.

Full-time weekly wage rates data were tabulated only for the following occupations:

<i>Occupations</i>	<i>Number of employees</i>
Auditors	30
Clerks, bookkeepers, stenographers.....	586
Carpenters	1390
Chauffeurs and drivers.....	149
Electricians and spotlight operators.....	704
Engineers (stationary), mechanics, firemen.....	88
Foremen and superintendents.....	126
Laborers, watchmen, maintenance men.....	992
Painters	270
Plasterers	81
Seamstresses and milliners.....	134
Tailors	48
Total	4598

In Table 10 and Chart IV are shown the full-time weekly wage rates of carpenters, plasterers and painters, as of May 15, 1926. The actual earnings as of that time were not tabulated, but even a cursory examination of the pay rolls shows that a large number of men received wages only for a few days while others worked considerable overtime. This, of course, is due to the fact that these men do not work regularly.

In most cases, the pay rolls gave the full-time weekly wage rates together with the actual earnings. In some cases where hourly or daily rates were given, the full-time weekly wage rates were computed on the basis of 8 hours per day and 48 hours per week, which is the rule in the motion picture industry, except for certain occupations, such as watchmen and maintenance men. Many of these employees work in excess of 48 hours per week.

It will be seen from Table 10 that the largest percentage of carpenters and painters were receiving full-time weekly wage rates of \$42 to \$44. Of the carpenters, 67.1 per cent were in that group, and of the painters 56.3 per cent were in that group. On the whole, the rates of the painters appear to be somewhat higher than the rates of carpenters. Most of the plasterers were also receiving full-time weekly wage rates between \$42 and \$44.

The number of carpenters, plasterers, painters, and of other workers shown in these tables represent practically all of such workers in the industry. The data as to full-time weekly wage rates are therefore representative and show the wage rates as of May 15, 1926.

TABLE 10—Number and Per Cent of Carpenters, Plasterers, Painters, Employed in Motion Picture Studios, receiving Specified Full-time Weekly Wage Rates in May, 1926.

The full-time weekly wage rates of chauffeurs, drivers, electricians, spotlight operators, laborers, watchmen, and maintenance men are shown in Table 11.

Twenty-one per cent of the chauffeurs and drivers received full-time weekly wage rates between \$30 and \$32; 16.1 per cent between \$34 and \$36; and 14.1 per cent between \$42 and \$44.

Of the 704 electricians and spotlight operators, 36.6 per cent were in the \$36 and \$38 group of full-time weekly wage rates and 46 per cent in the \$42 and \$44 group.

Of the 992 laborers, watchmen, and maintenance men, 17.6 per cent received full-time weekly wage rates between \$24 and \$26; 56.1 per cent received \$26 to \$28 full-time weekly wage rates, and 16.4 per cent received between \$30 and \$32 per full week. Many of these men still work in excess of 8 hours per day. Their wages also seem to be the lowest.

In Table 12 are shown the full-time weekly wage rates of tailors, seamstresses, and milliners employed in motion picture studios. It will be seen that 19.4 per cent received full-time weekly wage rates between \$22 and \$24; 23.1 per cent between \$24 and \$26; 9 per cent between \$26 and \$28; and 10.4 per cent between \$30 and \$32 per full week's work.

TABLE 12—Number and Per Cent of Tailors, Seamstresses and Milliners, Employed in Motion Picture Studios Receiving Specified Full-time Weekly Wage Rates in May 1926.

The next table (Table 13) shows the full-time weekly wage rates of clerks, bookkeepers, and stenographers. An examination of this table shows that the wage rates of the males were greater than those of the females. But among those who are listed as receiving full-time weekly wages of \$50 or over are clerks having that title but performing work of a supervisory capacity. Of the total number of 586 employees for whom data are shown in this table, the largest number received full-time weekly wage rates between \$30 and \$32; the next largest number of employees, namely, 13.9 per cent, received full-time weekly wage rates between \$24 and \$26; and 10.6 per cent between \$40 and \$42.

In Table 14 are shown the full-time weekly wage rates of auditors, foremen, superintendents, stationary engineers, mechanics, and firemen. This is a miscellaneous group of persons whose wage rates or salaries were not included in the preceding tables and for whom full-time weekly wage rates were tabulated.

Of this group of employees, the auditors are of course the highest paid. The foremen and superintendents included in this table are carpenters, plasterers, painters, and other foremen, who were distinctly classified as foremen or superintendents.

The "Extras."

The "extra" is the casual worker of the motion picture industry. He is the floater who is hired by the day and is generally paid off at the end of the day's work. The extra men and women are hired in the studios to furnish the background for the actors and artists who play roles. Many motion picture actors are hired by the day to perform only a day's work at a time, or perhaps a few days' work at the time. These are persons who play "parts" or "bits"; they are several rungs on the ladder nearer to the position of actors. The "extras" are as indispensable in the making of pictures as are the stars, but the extras are not required to have experience. The people who sit at tables in cafe scenes in the movies or the people who make up the crowds watching prize fights or baseball scenes are extras. There are, of course, various degrees of extras, some of them shading into actors playing "bits" or small parts. But the bulk of the extras are men, women, boys and girls of all ages and nationalities, various types used in the making of motion pictures.

The fact that many of the present well known actors and stars were formerly extras is largely responsible for the persistent attempts of many people, whether young or old, to become extras in the movies. Many of the extras may be likened to prospectors. For years and years they keep on living from hand to mouth upon the meager earnings which a few days' work per week might bring them, with the hope that some day an appreciative director might notice them and give them a role which will ultimately lead them to fame and riches.

Most of the extras probably do not depend entirely upon the motion picture industry for a livelihood. Among them are housewives who work in the movies for pin money, retired folks who work in the movies for whatever excitement or glory it might bring them. With these extras the uncertain existence of casual employment is relatively unimportant. But there are among the extras, men and women who are dependent upon work in the movies for their daily bread and the support of their families. These people have heretofore had a hard and baneful existence. There were too many of them, altogether too many of them to afford any of them a decent living. The Central Casting Corporation organized by the Association of Motion Picture Producers has been seeking to remedy this condition.

The Lure of the Silver Screen.

But before we explain the part which the Central Casting Corporation is now playing in the regulation of the employment of the extras, we must first describe another condition with which the Bureau of Labor Statistics has had to contend for a number of years.

Since the motion picture industry was begun, there has been a wild scramble on the part of many unsophisticated men and women to become actors and actresses in the movies. To become an extra has been considered the first step to this goal. These would-be actors and actresses would besiege the doors of motion picture studios and of private employment agencies furnishing extras to the studios with the hope of getting their chance. This desire to get into the movies has resulted in the establishment of so-called schools purporting to teach the art of make-up which they advertised as being requisite for qualifying as actors in the movies. The make-up schools have been promising employment to the film aspirants and cheating them of whatever money they could. The Bureau's prosecutions of these fake schools is referred to in this report on pages 87 and 88. It is also referred to in the Twenty-first Biennial Report. Investigations undertaken by the Bureau have disclosed illegal practices on the part of licensed employment agencies, such as accepting registration fees from would-be extras. Other employment agencies were found to be in collusion with fake movie schools which were defrauding aspirants to the screen.

The Private Employment Agency.

These abuses of extras and would-be extras did not stop with the taking of illegal fees and the extortion of money in the form of tuition fees. The regular employment agencies would charge the extras from 7 to 10 per cent of their day's earnings for furnishing them jobs in the motion picture studios. For instance, the extras who were paid \$5 per day had to pay 50 cents for every day's work they got; the extras who received \$7.50 per day were obliged to pay 75 cents per day for every day's work they received through the private employment agency. The private employment agency would get an assignment of the wages. The extras were paid in vouchers at the end of the day's work. The vouchers were then cashed by the employment agency, but the extras received only the difference between the full day's wages and the agency's fee for the day's work. Before going out to work, the extras assigned their commissions to the agency. This was in violation of the

CHART V.

PERCENTAGES OF EXTRAS EMPLOYED IN MOTION PICTURE STUDIOS RECEIVING SPECIFIED FULL-TIME DAILY WAGE RATES DURING THE 6 MONTHS OF JANUARY TO JUNE, 1926.

(Bureau of Labor Statistics-State of California)

law because it was an assignment of unearned wages. In order to do away as far as possible with the exploitation of the extras by the fake movie schools and by employment agencies, and to remove the practiced violations of the law arising out of the methods of paying the extras, the Bureau recommended to the Association of Motion Picture Producers the establishment of a central employment office, the cost of which would be borne by the producers.

The Central Casting Corporation.

The Association of Motion Picture Producers of Los Angeles adopted this recommendation of the Bureau * and organized on January 1, 1926, the Central Casting Corporation. This corporation is the central employment office of the motion picture producers of Los Angeles who are members of the association. The association bears the entire expense of maintaining this central employment office. The purposes for which this office was established may be summarized as follows:

1. To do away with the high fees charged by private employment agencies to extras in the motion picture industry.

2. To eliminate the violations of the law arising out of methods of paying off the extras.

3. To discourage the constantly increasing influx of persons as extras in the industry, and

4. To develop a residue of efficient extras who would be called upon frequently and who would be able to derive a decent living from their employment as extras.

The Central Casting Corporation is now placing about 90 per cent of all the extras needed in the industry. About 10 per cent of the total extras required are still being placed by private employment agencies.

Wages of Extras.

There is somewhere a twilight zone where the extra stops and the actor begins. The Central Casting Corporation defined an extra to be one whose daily wage does not exceed \$15 and who is hired by the day. The following tables (Tables 15 to 21) and Chart V shows the daily wage rates of extras.

The daily wage rates of extras were analyzed in detail in these tables in order to ascertain whether any changes in wage rates paid to extras took place since the inauguration of the Central Casting Corporation in January, 1926.

It will be noticed that the daily wage rate of extras are fixed at \$3, \$5, \$7.50, \$10, \$12.50 or \$15 and that there are no wage rates between these rates. These wages have apparently been established by custom.

The extras who are paid the higher wage rates are expected to have better clothes and to have some experience in appearing before the camera.

Chart V shows that in January, 1926, the percentages of extras who were receiving \$7.50 and \$10 per day were very nearly the same, a difference of less than 1 per cent. But in June, 1926, the percentage

* Miss Van Kleeck of the Russell Sage Foundation, in her memorandum referred to above, also recommended the establishment of a central casting office to remedy conditions of employment of extras.

of extras who were hired at \$7.50 per day was 41.0 compared with 31.0 per cent of extras who were hired at \$10 per day.

The wage rates paid to extras each month depends upon the kinds of pictures produced at the studios. In some productions very large crowds of people are required to appear at the studios in their street clothes. Extras who appear in mob scenes and very large crowds receive \$3 per day and get their lunch free. During the months from January to June, 1926, very few people were called at \$3 per day, but the number of extras called at \$5 and \$7.50 seems to have increased during the six months for which data have been tabulated.

PART III.

STATISTICS OF CALIFORNIA MANUFACTURES,
AVERAGE WEEKLY EARNINGS, AND
THE COST OF LIVING.

COURSE OF EMPLOYMENT, PAY ROLLS AND AVERAGE WEEKLY EARNINGS.

Representativeness of the Data.

In the following forty-eight tables are presented data showing the course of employment, pay rolls, and average weekly earnings in 790 representative California manufacturing establishments. These data have been tabulated for 12 principal groups of industries and are shown separately for the cities of Los Angeles, San Francisco, for all other cities combined, and for the state. The groups of industries for which data are presented in the following tables are:

Table No. Groups of industries

1. All industries.
2. Stone, clay, and glass.
3. Metals, machinery, and conveyances.
4. Wood manufactures.
5. Leather and rubber goods.
6. Chemicals, oils, and paints.

Table No. Groups of industries

7. Printing and paper goods.
8. Textiles.
9. Clothing, millinery, and laundering.
10. Foods, beverages, and tobacco.
11. Water, light, and power.
12. Miscellaneous.

The United States Census of Manufactures reported 246,948 wage earners in California industries, with a total wage bill for that year of \$353,183,000. The data shown in the following tables includes 158,170 wage earners with an average weekly pay roll of \$4,567,384, or an annual pay roll of \$237,503,968. The number of employees included in the following tables is 64 per cent of the total reported by the census and the pay roll is 67 per cent of the total reported by the census. The data in these tables, therefore, may be considered quite representative.

Average Weekly Earnings.

The average weekly earnings of wage earners, skilled, semiskilled, and unskilled, employed in California factories, shops, and canneries for June, 1926, are summarized, in the following tabulation:

<i>Industries</i>	<i>The state</i>	<i>Average weekly earnings in</i>		<i>Other towns</i>
		<i>Los Angeles</i>	<i>San Francisco</i>	
All industries -----	\$29 00	\$30 04	\$30 37	\$27 48
Stone, clay, and glass -----	28 51	27 55	32 50	28 92
Metals, machinery, and conveyances -----	31 10	30 54	30 61	31 85
Wood manufactures -----	29 12	31 08	29 17	28 70
Leather and rubber goods -----	26 45	30 87	26 75	22 38
Chemicals, oils, and paints -----	35 81	38 25	37 05	29 60
Printing and paper goods -----	32 69	33 77	33 94	29 96
Textiles -----	21 36	23 56	21 59	19 33
Clothing, millinery, and laundering -----	22 02	21 57	22 76	20 85
Foods, beverages and tobacco -----	23 86	30 36	24 12	21 39
Water, light and power -----	30 32	25 04	31 58	31 45
Miscellaneous -----	24 54	19 53	25 11	30 95

The highest average weekly earnings reported for all industries since January, 1925, was \$29.55 in March, 1926, whereas the lowest average weekly earnings reported for all industries was \$27.78 in July, 1925.

Fluctuations in Employment.

The peaks and troughs of employment for the various groups of industries are shown by index numbers based upon the average monthly number of employees during 1925. The highest and the lowest months of employment in 1925 for the various industries of the state are shown in the following tabulation:

<i>Industries</i>	<i>Months of maximum employment</i>	<i>Months of minimum employment</i>
All industries	August	January and February
Stone, clay and glass	August and December	February
Metals, machinery and conveyances	November	January
Wood manufacturing	October	February
Leather and rubber goods	August	March
Chemicals, oils, paints	July	January and December
Printing and paper goods	November	April, May, June, July
Textiles	November	June, July and August
Clothing, millinery and laundering	March and December	June
Foods, beverages and tobacco	August	February
Water, light, power	July	March
Miscellaneous	May	January

In the preceding tabulation are shown the months for which the highest index numbers appear in the detailed tables. For instance, in the foregoing tabulation, October is shown to be the peak month of production and February is shown to be the lowest month of production in wood manufactures. The index number for October is 106 and for February it is 93 (Table 4 for the state). An examination of this table, however, shows that the highest months of productions in this industry are from May to December and the lowest from December to May.

UNITED STATES CENSUS STATISTICS OF CALIFORNIA MANUFACTURES.

The Bureau of the Census of the United States Department of Commerce has been taking a biennial census of manufactures throughout the United States since 1919. The latest of the census for the year 1925 is now being taken and the final data of the 1923 census data have not yet been published by the federal government. In the following tables are presented U. S. census 1923 statistics of California manufactures, for the California cities for which data have been secured by the Bureau for incorporation in this biennial report. The industries for San Francisco, Los Angeles, and Oakland, the three principal cities of our state, have been arranged into sixteen principal industrial groups, according to the classification adopted by the U. S. census. In Table 1, following, are shown summary statistics for twenty-five California cities having 10,000 or more inhabitants. In the following tabulation ten cities are ranked according to the highest number of wage earners:

<i>Rank</i>	<i>Cities</i>	<i>Average number of wage earners</i>
1.	Los Angeles	55,301
2.	San Francisco	43,638
3.	Oakland	15,027
4.	Sacramento	6,676
5.	Richmond	4,480
6.	San Jose	3,234
7.	Stockton	3,167
8.	San Diego	2,722
9.	Berkeley	2,494
10.	San Bernardino	2,340

TABLE 1—Summary of Manufactures Statistics for California Cities having 10,000 Inhabitants* or more: 1923.

(From United States Census of Manufactures 1923.)

City	Number of establish- ments	Average number of wage earners	Wages	Value of products
Alameda	40	1,455	\$2,020,834	\$6,153,962
Bakersfield	49	1,148	1,744,984	6,070,032
Berkeley	118	2,494	3,630,878	32,404,525
Eureka	32	1,372	1,985,280	5,998,120
Fresno	143	2,257	3,259,541	22,920,534
Glendale	48	503	705,322	3,416,640
Long Beach	135	1,945	2,820,500	14,139,248
Los Angeles	2,346	55,301	81,468,129	417,654,081
Oakland	514	15,027	21,096,479	122,491,778
Pasadena	123	1,209	1,951,423	7,901,249
Pomona	26	354	429,010	1,991,331
Richmond	29	4,480	8,015,546	55,106,354
Riverside	28	340	534,266	2,888,192
Sacramento	206	6,676	9,006,216	32,995,231
San Bernardino	39	2,340	3,369,640	9,119,982
San Diego	190	2,722	3,487,496	23,475,935
San Francisco	2,090	43,638	61,376,028	416,317,535
San Jose	142	3,234	3,889,960	24,618,166
Santa Ana	70	672	831,365	5,132,332
Santa Barbara	48	347	585,242	2,674,041
Santa Cruz	28	195	248,476	1,213,902
Santa Monica	19	371	609,744	2,081,957
Stockton	155	3,167	4,239,589	26,326,364
Vallejo	23	309	500,401	6,044,517
Venice	8	58	88,376	397,818

*According to census of 1920.

Wall plaster, wall board, and floor composition.....	8	257	420,531	2,782,347
Metals and metal products other than iron and steel....	149	1,677	\$2,743,272	\$10,211,798
Brass, bronze and other non-ferrous alloys and manufactures of these alloys and of copper.....	17	260	\$393,301	\$1,872,801
Copper, tin and sheet-iron work, including galvanized iron work, not elsewhere classified.....	72	718	1,142,771	4,334,209
Electroplating.....	15	151	274,709	612,754
Gas and electric fixtures not including lamp and reflectors.....	21	303	465,856	1,890,010
Jewelry.....	24	245	466,635	1,502,024
Machinery, not including transportation equipment.....	170	5,110	\$7,890,881	\$30,975,696
Electrical machinery, apparatus and supplies.....	33	502	\$683,135	\$3,689,752
Foundry and machine-shop products, not elsewhere classified.....	128	4,249	6,660,592	24,451,975
Pumps, power.....	9	359	547,154	2,833,969
Musical instruments and phonographs.....	3	21	\$29,409	\$56,180
Musical instruments and materials, not elsewhere classified.....	3	21	\$29,409	\$56,180
Transportation equipment, air, land and water.....	81	1,097	\$1,674,438	\$6,347,523
Motor vehicle bodies and parts.....	73	933	\$1,423,667	\$5,651,847
Ship and boat building, wooden, including repair work.....	8	164	250,771	695,676
Miscellaneous industries.....	162	3,438	\$8,014,179	\$43,760,718
Artificial limbs.....	3	12	\$23,627	\$92,598
Brooms.....	5	46	64,421	273,107
Dairymen's supplies: creamery, cheese factory and butter factory equipment and poultrymen's and apiarists' supplies.....	5	29	44,522	196,750
Dental goods.....	7	29	45,914	242,346
Enameling and japanning.....	3	17	25,917	68,233
Fancy and miscellaneous articles, not elsewhere classified.....	9	56	61,868	246,314
Hand stamps and stencils and brands.....	4	66	88,397	410,591
Mattresses and bed springs, not elsewhere classified.....	18	409	514,265	3,092,858
Models and patterns, not including paper patterns.....	15	103	189,940	465,503
Motion pictures, not including projection in theaters.....	36	2,140	6,037,207	34,611,414
Optical goods.....	6	71	143,054	541,436
Photographic apparatus and materials.....	6	63	94,949	314,710
Signs and advertising novelties.....	20	195	429,763	1,229,324
Surgical appliances.....	6	15	20,305	162,945
Toys, games and playground equipment.....	4	20	27,368	108,100
Window shades and fixtures.....	15	167	202,662	1,714,489
All other industries.....	247	11,860	\$16,760,463	\$59,837,609

¹Figures are preliminary and subject to change.

²These 36 establishments probably do not include the largest motion picture producing establishments in Los Angeles. The number of wage earners in this industry in Los Angeles is about three times greater than shown here. The same is probably also true of the "value of products."

THE COST OF LIVING.

Percentages of change in the cost of living and in retail prices of food for San Francisco and Los Angeles, as reported by the Bureau of Labor Statistics of the United States Department of Labor are shown in Tables 1 to 3.

It will be noted that the increase in the cost of living in San Francisco and Oakland in June, 1926, was 60.7 per cent over December, 1914. In Los Angeles, the increase was 71.2 per cent during the same period. It does not follow, of course, that it now costs more to live in Los Angeles than in San Francisco. The present actual cost of living could be gauged by these percentages of change only if the actual cost of living were known in these cities in December, 1914. What the actual cost of living is at any one time, in any place, depends upon the standard of living one has in mind. Obviously, the cost of living varies with one's earning capacity. The cost of living of the skilled worker is greater than is the cost of living of the unskilled, as the standards of living of the former workers are higher.

Several estimates as to the actual cost of living in Fresno, San Francisco, Oakland, and Los Angeles, have been made by the Labor Bureau, Inc. These estimates were made on a basis of the "Minimum Quantity Budget Necessary to Maintain a Worker's Family of Five at a Level of Health and Decency," prepared by the U. S. Bureau of Labor Statistics. These estimates have been recently used in arbitration cases between trade unions and employers in California. These data are presented in summary form in Tables 4, 5, 7, and 8.

Another estimate as to the amount of income needed by a laborer and his family, including his wife, boy 11 years, girl 5 years, and boy 2 years, to live in Oakland in June, 1925, was made by the Heller Foundation for Research in Social Economics. These estimates are shown in Tables 6 to 6-C.

It will be observed that the estimate made by the Labor Bureau, Inc., which is of economic advisors to labor unions, as to the cost of living for a family of five in Oakland as of June, 1925, was \$2,492.42, while the estimate made by the Heller Foundation for Research in Social Economics was \$2,189.73, a difference of \$302.69. The estimate made by the Labor Bureau, Inc., was 13.8 per cent higher than that of the Heller Foundation. An examination of the items entering into the several budgets will reveal the principal differences in the two budgets.

LETTER OF TRANSMITTAL

NOVEMBER 1, 1926.

HONORABLE FRIEND WM. RICHARDSON,
Governor, State of California.

SIR: We have the honor to submit herewith the Fifth Biennial Report of the California Highway Commission of the State of California.

Respectfully,

CALIFORNIA HIGHWAY COMMISSION,
HARVEY M. TOY, Chairman,
LOUIS EVERDING, Member,
NELSON T. EDWARDS, Member.

ORGANIZATION OF THE CALIFORNIA HIGHWAY COMMISSION, 1926.

BIENNIAL REPORT

OF THE

CALIFORNIA HIGHWAY COMMISSION

NOVEMBER 1, 1926.

The members of the California Highway Commission herewith submit the biennial report upon state highway operations for the seventy-sixth and seventy-seventh fiscal years, ending June 30, 1926. Expenditures, construction projects completed and under way, and similar data are included in proper sequence in the body of the report.

Our construction work, in comparison with past biennial periods, has been limited to \$12,025,605.57 including overhead, on account of lack of new construction funds. The three bond issues had been previously expended except a balance of \$3,000,000, and our only other available fund was federal aid, approximating \$2,500,000 per annum.

NEW CONSTRUCTION

In the matter of new construction, we have maintained a policy of confining the work to extensions of improvement on interstate and main line highways, to the greatest possible extent.

This report will show that quite material progress has been made in that direction. Marked improvement is noted in our records and by the motorist, on the Redwood Highway, the Pacific Highway, the Truckee Highway, the San Diego-Yuma Highway, Needles to Barstow, Mecca to Blythe and the Coast Route in the southern part of the state.

A project of considerable importance, undertaken during this biennium, is the Bay Shore Highway from San Francisco to San Jose. The funds thus far expended, practically \$500,000, have been supplied entirely by the city of San Francisco.

We regard the completion of the all-year road from Merced to the Yosemite Valley as of primary importance to the state. This project is an outstanding example of the effectiveness of convict labor, which subject is discussed at length below.

RECONSTRUCTION

Our program for reconstruction and maintenance has been aggressive. Receipts from the two cent gas tax and motor vehicle license fees for the biennium have aggregated the sum of \$20,369,144.70. A detailed statement of its expenditure is recorded in this report. In the reconstruction program, the recommendations of the State Highway Engineer have been based upon traffic congestion and condition of pavement, and we believe the best interests of the state as a whole have been conserved.

In conformity with the established policy, reconstruction work has been confined as nearly as possible to main line highways, such policy being justified by the constantly increasing traffic. Reconstruction expenditures for the biennium, including overhead, total \$10,956,888.18.

PLATE I. State Highway constructed with convict labor along the Merced River in Mariposa County.

PLATE II. Reconstructed State Highway over Ortega Hill in Santa Barbara County.

MAINTENANCE

Most satisfactory progress has been made in maintenance. Under authority of the law enacted by the 1925 legislature and signed by the Governor, the Commission was enabled to take over for maintenance approximately 1200 additional miles of roads legally in the system but never having had state service. A year's program of this additional service has resulted in a very marked improvement in the traversable condition of these roads and has very considerably curtailed the pressure on the Commission for more costly improvements. Maintenance expenditures during the biennium, including overhead, total \$8,842,611.53.

SYSTEM OF CONSTRUCTION

It has been the aim of the Commission to establish a system of construction in accordance with the highest standards of engineering practice. Our research department has carried on investigations and compiled data which will have the effect of greatly prolonging the useful life of all types of pavement used by the state. The Commission has a just pride in the beneficial results of the investigations of this department.

CONVICT LABOR

In our report of 1924 reference was made to convict labor. During the past biennium this labor has been employed in various localities. Comparative cost of contract construction and convict labor construction is recounted elsewhere.

The employment of convicts on state highway work is justifiable from every viewpoint. The cost of construction is at least no more than by contract and the state is relieved of the cost of maintaining a large number of men in prison, as they support themselves in camp. The state is also relieved in many instances of caring for minor children of prisoners, as the law provides that a portion of the convict's earnings shall be used for the support of dependents. One of the greatest benefits of the system is to the prisoner himself. It takes him away from prison environment and makes him self-supporting, thereby restoring his self-respect. At the end of his term it sends him out into the world hardened to toil, and with sufficient funds to support himself until he can place himself in some useful employment.

In this connection we recommend the enactment of a law providing an annual appropriation from the general fund, not less than \$1,800,000, for the enlargement of prison labor operations.

In arriving at this figure, we base our recommendations on the known costs per convict day over a year's period. These records show the divisions of cost to be: Free men pay roll, \$1.50; convict pay roll, \$1.80; equipment rental, etc., including steam shovels, trucks, tractors, etc., \$1; explosives, construction materials, miscellaneous, (gas, oil, etc.), \$1.70; a total of \$6 a day for each prisoner employed. These figures indicate a fair average on which we base our estimate of cost to maintain 1000 convicts on highway construction. Such an appropriation would really cost the state little, as a substantial saving in maintenance cost of state prisons would be effected. An enlarged program of prison camp work will result in the mountainous and

PLATE III. State Highway constructed with convict labor along the Smith River in Del Norte County

PLATE IV. Subway under Sacramento Northern Railroad on State Highway north of Sacramento.

recreational areas being provided with adequate highways many years in advance of what would be possible without convict road building assistance.

BRIDGES AND GRADE SEPARATIONS

A problem of pressing importance is presented by the urgent need of construction of many major bridges on the highway system and the intolerable grade crossing situation.

The State Highway Engineer, after careful analysis, estimates that it will cost fully \$15,000,000 to provide suitable bridge structures on the present highway system, of proper strength and width to care for present and reasonably future traffic. No such sum of money seems available during the time the construction of these structures will become actual necessities, and some plan of finance, therefore, should be devised to meet the situation.

During the earlier period of highway construction it was the policy for counties to meet the cost of bridge construction, but with the present type of bridges, made necessary by expanded traffic, it has become an impossibility for most of the counties to finance their building. Considering the fact that many of the larger and more expensive bridges are located in counties of small assessable property valuation, our recommendation becomes the more important. At the present time there exists in one county alone a vital need for the construction of bridges which will cost \$750,000, an amount far beyond the financial ability of the county in question.

GRADE SEPARATIONS

Scores of lives are forfeited and hundreds of accidents are being recorded every year at grade crossings. The only remedy for this greatest hazard of motor vehicle transportation is in separating the highway and railway grades. The State Highway Engineer has estimated costs, and reports that it will involve the sum of approximately \$10,000,000 as the state's share. Here again, no fund seems available to meet the universal demand for this class of construction.

We, therefore, recommend a bond issue of \$25,000,000, to be made available over a period of years at an annual rate sufficient to permit rapid progress in correcting the existing situation, as relates to bridge construction and grade separations.

Other states are faced with and meeting the problem of grade separations. New York recently passed a bond issue of \$300,000,000 for the purpose. Of this sum \$75,000,000 is allocated as the state's share. Of the remainder, the counties or localities and the railroads will be afforded long term loans on a division of \$75,000,000 to the counties and \$150,000,000 to the railroads.

In connection herewith we refer to the report of the Highway Advisory Committee of 1925, in which is incorporated a like recommendation. This committee reported after a thorough investigation of the subject.

PLATE V. Bridge across the Truckee River, near Boca, in Nevada County.

PLATE VI. Oil trucks on the State Highway near Oasis in Imperial County.

PROTECTION OF HIGHWAYS

We reaffirm our statement made in 1924 Biennial Report that police protection be given the highways. Overloading of trucks and excess of speed is a menace to both life of persons and lasting quality of pavements. The law providing a state police should be adequately fortified to the end that officials can exercise their authority without personal loss as is now the case. An amendment to the law is recommended to make this possible.

PAYMENTS TO COUNTIES

It has become apparent that a number of counties with little assessable property and small automobile registration are badly handicapped in providing funds for the care of county roads which connect with the state highway system.

In many instances these roads are used and worn out more by automobile owners from the centers of population in visiting recreational areas than by the residents of the counties.

Counties now participate with the state in an equal division of the motor vehicle license fees and gas tax receipts in proportion to the number of automobiles registered in the county. In a few instances the amount so returned is nominal and can be used to little advantage for permanent improvement.

After full consideration of this subject the Commission recommends that the law be amended to provide that each county shall receive at least \$15,000, the remaining sum subject to distribution thereafter being allocated on the present basis of registration of automobiles. Such a change would cost the larger and richer counties very little and would be of material assistance to the smaller counties. The 1925 records disclose that nine counties would benefit and that only about \$100,000 would be involved out of a total distribution of approximately \$11,000,000.

RIO VISTA BRIDGE

This bridge, spanning the Sacramento River, was constructed by the counties of Sacramento and Solano under permit and agreement with the United States War Department in March, 1917.

It was taken over by the state as part of the highway system by act of the legislature, as set forth in chapter 831 of the 1921 Statutes. In the War Department permit for its construction is a clause as follows:

5. That if and when the river is widened by proper authority, such work may be done across the site of the bridge, without delaying the progress of such work to provide for bridge crossing or to give notice thereof, and that such extra spans as may be necessary to fill the portions of the bridge crossing and approaches as may be thus destroyed, shall be built by the permittees, their assigns or successors, without claim of any kind against the United States for compensation.

The federal government is now engaged in widening the Sacramento River at the point of the bridge location and has called upon the state through the Highway Commission, as successors in interest, to construct additional spans to conform to their plans. This being part of a legislative act highway, there is no fund available from which the cost of construction can be paid.

In view of the fact that the progress of the federal flood control program is being interfered with and the further fact that our obligation is unquestioned, it is imperative that immediate action be taken on the federal request. It, therefore, appears to be a matter for which special appropriation should be provided, and we recommend that an appropriation of \$200,000 be made from the General Fund of the state for this construction, that sum being the cost as estimated by the State Highway Engineer.

CALIFORNIA HIGHWAY COMMISSION,

HARVEY M. TOY, Chairman,
LOUIS EVERDING,
NELSON T. EDWARDS.

APPENDIX A

REPORT OF THE STATE HIGHWAY ENGINEER TO
THE CALIFORNIA HIGHWAY COMMISSION

NOVEMBER 1, 1926.

To the CALIFORNIA HIGHWAY COMMISSION:

GENTLEMEN: The biennial period from July 1, 1924, to June 30, 1926, has been characterized by steady and systematic progress in all phases of state highway activities:

NEW LAWS

An event of major importance was the enactment by the 1925 legislature of a measure sponsored by the Highway Commission, which clarified many situations of legal ambiguity in previous measures concerning the state highway work. Provisions which simplify the condemnation of land required for rights of way, and creating the Highway Commission's right to acquire additional parallel right of way for the preservation of timber were included in the new law. Another important feature makes it mandatory upon the part of the state, upon request of the trustees of any city having less than 2500 population, to take over and maintain connecting streets through the municipality.

Probably the most important feature of this act is the one under which the Highway Commission is directed to undertake maintenance on all traversable state highways, whether constructed or unconstructed.

REVENUES AND EXPENDITURES

The revenue from the gas tax and motor vehicle license measures, passed at the 1923 session of the legislature, has been sufficient to permit a healthy activity on the part of the highway organization. The details of revenues and expenditures for each fiscal year of this biennium are shown in the following table:

REVENUES JULY 1, 1924, TO JUNE 30, 1926

	<i>July 1, 1924 to June 30, 1925 Amount</i>	<i>July 1, 1925 to June 30, 1926 Amount</i>	<i>Total for biennium Amount</i>
Bond issues.....	\$3,181,500 00		\$3,181,500 00
Motor vehicle license fees.....	3,079,658 26	\$3,432,610 58	6,512,268 84
Gas tax apportionment.....	6,354,611 72	7,502,264 14	13,856,875 86
Federal aid.....	3,371,711 00	3,287,067 83	6,658,778 83
Contributions	495,935 09	375,733 09	871,668 18
Totals	\$16,483,416 07	\$14,597,675 64	\$31,081,091 71

EXPENDITURES JULY 1, 1924, TO JUNE 30, 1926

	<i>July 1, 1924 to June 30, 1925</i>	<i>July 1, 1925 to June 30, 1926</i>	<i>Total for biennium</i>
Overhead	\$1,542,609 75	\$1,409,928 40	\$2,952,538 15
Maintenance	3,710,598 19	4,478,737 20	8,189,335 39
Reconstruction	4,008,045 32	5,789,430 23	9,797,475 55
New construction.....	6,518,622 68	4,367,133 51	10,885,756 19
Totals	\$15,779,875 94	\$16,045,229 34	\$31,825,105 28

PLATE VIII. Charley Creek Bridge in Shasta County.

CONTRACT PRICES

Prices paid for highway work have shown a decline during this biennium. Some of the reduction may be attributed, perhaps, to a standardization of specifications, contracts and plans. In so far as possible, in accordance with state law, it has been endeavored to closely define all details of requirements which might be subject to variation, and the result has been to render state highway contracts more popular with reputable contractors, thereby tending to reduce bids. Average contract prices during this biennium as compared with the preceding, are shown below:

AVERAGE CONTRACT PRICES, JUNE 30, 1921, TO JUNE 30, 1926

Year	Grading (per cu. yd.)	Asphalt concrete including all materials (per ton)	Concrete pav'tmt including all materials (per cu. yd.)
June 30, 1921, to June 30, 1922-----	\$0 71	\$7 92	\$14 29
June 30, 1922, to June 30, 1923-----	0 74	8 10	13 18
June 30, 1923, to June 30, 1924-----	0 75	7 27	13 49
June 30, 1924, to June 30, 1925-----	0 59	6 43	10 85
June 30, 1925, to June 30, 1926-----	0 44	5 13	10 58

Further comparisons of prevailing contract prices with those of preceding years are shown in detail in Appendix R.

PROGRESS IN HIGHWAY CONSTRUCTION

Since July 1, 1924, the following mileages of highway, classified as to type, have been accepted by the Commission, including newly constructed highways and reconstructed highways:

HIGHWAYS CONSTRUCTED

New Construction

	Placed under contract		Total miles
	Prior to July 1, 1924 miles	July 1, 1924 to June 30, 1926 miles	
Graded or rock surfaced-----	230	95	325
Bituminous macadam-----	10	10	10
Portland cement concrete-----	18	15	33
Asphalt concrete on macadam or bituminous base -----	--	2	2
Total new construction-----	258	112	370

Reconstruction

Graded or rock surfaced-----	26	33	59
Bituminous surface-----	6	7	13
Portland cement concrete-----	58	38	96
Asphalt concrete on macadam or bituminous base -----	3	11	14
Asphalt concrete on Portland cement concrete--	14	18	32
Portland cement concrete pavement widening--	8	35	43
Total reconstruction-----	115	142	257
Total new construction and reconstruction	373	254	627

In addition to the above, there have been accepted by the Commission 65 bridges and grade separation structures, 24 of which were placed under contract prior to July 1, 1924.

PLATE IX. Rincon Seawall along the Coast Road in Ventura County.

On June 30, 1926, the following mileage of highways was under contract and in progress of construction:

HIGHWAYS UNDER CONSTRUCTION

New Construction		Miles
Grading or rock surfacing-----		*169.52
Bituminous macadam-----		6.21
Portland cement concrete-----		10.27
Asphalt concrete on macadam or bituminous base-----		6.45
Subtotal -----		192.45
Reconstruction		
Grading or rock surfacing-----		28.75
Bituminous macadam-----		9.64
Portland cement concrete-----		38.85
Asphalt concrete on macadam or bituminous base-----		6.11
Asphalt concrete surface on Portland cement concrete-----		28.00
Subtotal -----		111.35
Total under construction-----		303.80

*Includes 56.9 miles under construction by U. S. Bureau of Public Roads with Forest Highway funds.

OVERHEAD EXPENSE

Diligent and continuous effort has been exerted to accomplish a reduction of overhead expense in the highway work. Work on preliminary surveys has been curtailed to the minimum necessary to obtain proper data for preparation of plans. The machinery of preparing plans has been adjusted by standardizing details of the drafting work. Many contracts have been awarded on a basis of using preliminary estimates for final payment, thereby eliminating the expense of final surveys. Reports and other red tape of minor importance have been eliminated where possible, so that field men have more time to devote to their work.

The number and size of day labor jobs authorized has been greatly reduced, and a practice has been inaugurated of taking informal bids in the locality, for portions of day labor work susceptible of being done by contract.

Each department of our work is in charge of a responsible head, and close contact is maintained with the division engineers and field men. This tends to greater economy, both in overhead and in the construction expense.

ACCOUNTING SYSTEM

During this period, the greater part of a study and modification of the accounting system was accomplished. This work was done at our request under the direction of the State Board of Control, which detailed one of their accountants to the work. A system has been devised, and on June 30, 1926, is ready for complete installation throughout all the offices, which has for its object the rapid accumulation of all accounting data soon after the last day of the current month.

The new system has as its basis the performing of the accounting work in the division offices, each functioning as a separate unit. The division reports are combined in the headquarters office to make up a monthly report for the operations of the entire organization. The accounting system is explained in further detail under Appendix L.

PLATE X. State Highway in San Bernardino County.

PLATE XI. Skyline Boulevard in San Mateo County.

COMMITTEE OF NINE

During this biennium the Highway Advisory Committee, the appointment of which was authorized by the 1923 legislature, performed the major part of the work.

Mr. Louis Everding, member of the Highway Commission, and the writer, as State Highway Engineer, served on this committee throughout its existence. In 1924 the committee was accompanied on many trips, and the entire state highway mileage was inspected. These trips were followed by numerous meetings during December, 1924, and January, 1925, at which the members discussed various questions bearing on the future of the California highway system.

The committee was given free access to the highway files, and at their request, an estimate of the cost of completing the state highway system as it then existed, was prepared by the highway organization. This estimate is set forth in detail under Appendix N. Care consistent with the purpose for which it was intended was given to its preparation. In the absence of surveys and plans, and, in some cases, even traversable roads which facilitated inspection, it is not considered that the estimate is close or final.

Many uncertain factors were immediately foreseen when the period of duration of highway construction was considered; therefore, the detail of this estimate for any particular highway may later be found inaccurate. However, it is believed that this work of the highway organization for the committee has been instrumental in bringing home to the people of the state a realization of the magnitude of the state highway project, and has impressed upon them the fact that its financing and orderly progress are matters of state-wide importance.

DEPARTMENTAL ORGANIZATION

The natural channels into which the work of highway construction divides itself are recognized by the organization of definite departments to handle certain activities. This type of organization permits individual engineers to devote their entire time to a particular branch of the work, thereby developing their full usefulness in specialization. Under this arrangement, our departments are as follows:

- Surveys and Plans Department.
- Construction Department.
- Maintenance Department.
- Equipment Department.
- Bridge Department.
- Accounting Department.

In addition to these, there are responsible heads in charge of convict labor work, purchasing, and publicity. Résumés of the responsibilities and activities of each department are found later in this report.

PRISON ROAD CAMPS

During this biennium, thirty miles of highway have been graded through prison road camps. The outlay has been \$1,882,900.

The transfer of state's prisoners from the confinement of the prison to the healthy atmosphere of the road camps is a branch of our work which is of inestimable benefit to the state as a whole.

PLATE XII. State Highway constructed with convicts along the Smith River in Del Norte County.

PLATE XIII. Kern River Canyon road constructed with convict labor in Kern County.

When prison camps are organized, the Highway Commission, charged with the duty of expending state funds in the construction of highways, regards the road building activities of the camps as a major day labor operation of highway construction, and it becomes our duty to conduct the work economically so that the state will benefit by the accomplishment of construction at low cost in addition to the other benefits.

The economical performance of road work through these camps requires primarily that the work be in charge of superintendents and engineers of outstanding ability in the use of equipment and the handling of men. Large units of equipment are necessary on these jobs for the reason that no matter if men work only for their keep, they can not compete with modern earth moving machinery in daily output. Rapid progress is necessary on work done by prison camps as well as by contract, particularly on primary roads. Therefore, we find that our convict operations require not only man power, but also shovels, compressors, drills, pumps, trucks, etc.; materials and supplies such as powder and dynamite, drill steel and pipe; also, a considerable number of free men to act in supervisory capacities, as superintendents, foremen, timekeepers, mechanics, truck drivers, and other skilled labor.

Analysis of the Briceburg job, where 17 miles of highway were graded between Briceburg and El Portal, and the Kern River job, where 8.3 miles of highway were graded westerly from Democrat Springs, is shown in the table below:

ANALYSIS OF BRICEBURG-EL PORTAL JOB.

			<i>Per cent</i>
Amount paid prisoners -----	\$334,678	27	32.8
Amount paid free labor -----	196,692	00	19.3
Supplies and construction material -----	299,807	12	29.3
Equipment rental -----	189,873	99	18.6
Totals -----	\$1,021,051	38	100.0

ANALYSIS OF KERN RIVER JOB

			<i>Per cent</i>
Amount paid prisoners -----	\$140,939	77	27.5
Amount paid free labor -----	134,733	83	26.3
Supplies and construction material -----	152,582	27	29.8
Equipment rental -----	84,254	49	16.4
Totals -----	\$512,510	36	100.0

From the above figures, it can be seen that to accomplish the work expeditiously, the prisoner expense is only a small part of the total.

We consider that our efforts to perform this construction economically have been attended by a considerable degree of success. Reports on the final cost of these two jobs are set forth below:

BRICEBURG TO EL PORTAL

VI-Mpa-18-E, F, G.

<i>Item</i>	<i>Estimated Cost</i>	<i>Actual Cost</i>
Excavation—unclassified, per cubic yard -----	\$0 84	\$0 904
Structure concrete, per cubic yard -----	35 00	43 43
Hauling and installing corrugated metal pipe culverts, per lineal foot -----	1 46	1 468

PLATE XIV. Maintenance Station and foreman's cottage at San Luis Obispo.

PLATE XV. Lankershim shop building in Los Angeles.

FIRST CROSSING KERN RIVER TO DEMOCRAT SPRINGS.

VI-Ker-57-G.

<i>Item</i>	<i>Estimated Cost</i>	<i>Actual Cost</i>
Excavation—unclassified, per cubic yard -----	\$1 00	\$1 004
Structure excavation, per cubic yard -----	3 00	2 67
Structure concrete, per cubic yard -----	35 00	57 50
Rubble masonry, per cubic yard -----	5 00	5 04
Riprap, per cubic yard -----	1 00	0 78
Hauling and installing corrugated metal pipe culverts, per lineal foot -----	1 76	1 273

The cost of performing the individual items of the work compares very favorably with prevailing contract prices for similar work. If prison road work can be conducted with costs as favorable as those shown above, it has justified its existence from an economical standpoint, in addition to the undisputed benefits to society.

Further analysis of the above figures shows that our cost of operating prison road camps is about \$6 per prisoner per day, including all charges.

Prison road camps can perform work most economically in remote locations in heavy mountainous territory where the opportunities to escape are reduced to a minimum, and where the work is sufficiently heavy to not require the frequent moving of camps. The present state highway system offers few locations meeting these requirements on main line roads. The state should concentrate all possible funds upon primary roads until they are completed.

In view of this situation, it would seem that special appropriations for convict camp operation should be authorized by the legislature, so that the number of prisoners, the locations selected for work, the size of the camps and all other details, will not need to be considered in connection with the other funds of the Highway Commission, all badly needed to complete main roads.

Our financial situation is such that for the next fiscal year not over 250 men can be financed in road camps. These will be located in three camps, as at present; the Crescent City camp on the Crescent City-Grants Pass Road in Del Norte County, the camp on Route 15, Tahoe-Ukiah Road in Lake County, and a small camp on the Briceburg Road in Mariposa County. This number will cost about \$1,500 per day, or nearly \$40,000 of cash outlay per month.

One thousand men in prison road camps, which number has been advocated by many interested agencies, would, at the same rate, cost the state \$1,800,000 per year, and would probably result in completely grading 30 to 35 miles of highway per year.

MAINTENANCE STATIONS

During this biennium, the Maintenance Department has prepared a plan to be followed for the future location and equipping of maintenance stations. According to this plan, 112 stations are now owned, equipped and in use, and 111 additional stations will ultimately be required. It is our policy to gradually locate and acquire suitable sites, and construct the necessary facilities. During the past biennium, \$476,818 have been devoted to this purpose from the State Highway Maintenance Fund. The cost, as at present estimated, for acquiring and equipping all the sites which will be ultimately required, is \$694,400 additional.

PLATE XVI. Reconstructed state highway near Pit River bridge in Shasta County.

PLATE XVII. State Highway between Holtville and East High Line Canal, Imperial County.

Well equipped maintenance stations, including foreman's cottage, established at locations convenient to the road sections, result in more satisfactory work and higher class personnel, with better care of equipment.

DIVISION OFFICES

During this period, division offices and shop buildings have been constructed or arranged for at Redding, Division II; Fresno, Division VI; and San Bernardino, Division VIII. At each of these locations, areas of about three acres were obtained, providing ample room for present needs and for expansion.

Shop buildings only have been constructed or arranged for at Lankershim, Division VII; and at Bishop, Division IX.

The physical equipment and facilities for doing work of the Highway Commission have never been in better condition than they are at present.

ENCROACHMENTS

During this period, a study has been started, which, when completed, will be the basis of systematizing the issuing of permits for encroachments on the state highways. It is planned to establish ultimate widths of improvement on all of the state highways, to be used in the issuance of permits for the necessary encroachments, such as pole lines, water and gas mains, tree planting, sidewalks, etc. When this plan is finally perfected and in operation, the issuing of permits, and the relations with those desiring to make encroachments will be greatly simplified.

RESEARCH

Under the Construction Department, Mr. C. S. Pope, Construction Engineer, and Mr. C. L. McKesson, Materials and Research Engineer, have aggressively carried on the routine testing work attendant upon highway construction, and also important research work.

In 1924, in conjunction with the Lewis Institute of Chicago, extensive investigation of the use of calcium chloride for curing concrete was made at our laboratory. The results of this investigation have already been published by the Lewis Institute, due credit being given to the California Highway Commission.

In 1926, in conjunction with the U. S. Bureau of Public Roads, a systematic investigation of the loss of material on rock surfaced roads was undertaken, including methods of preventing this loss by the use of asphaltic binders. This investigation is still under way. The Bureau of Public Roads is furnishing a corps of their technical field men and laboratory experts as their share of the project.

Under the direction of the Construction Department, aided by laboratory studies, the strength obtained in our concrete mixtures has steadily increased. The field men have been furnished data which familiarizes them with the essential principles governing the mixing of concrete. Advances have been made in the proportioning of asphaltic concrete mixtures to increase density, weight, and stability under traffic. Experimental sections have been constructed with surfaces roughened by uniform applications of premixed and heated small rock, designed to keep an open texture of the surface, thereby decreasing possibilities of automobiles skidding.

PLATE XVIII. County Road between Red Bluff and Payne's Creek in Tehama County, before being maintained by State.

PLATE XIX. After state maintenance of County road in Tehama County.

CONSTRUCTION FUNDS

The amount of \$10,886,000, set forth in the beginning of this article, which has been expended for new construction during this biennium, checks closely with the receipts of federal aid from the U. S. Government and proceeds from the sale of Third State Highway bonds during the same period. The vastness of the highway system of California prevents progress satisfactory to everyone being made with this amount in construction and extension of good road facilities. The demands of modern traffic are such that makeshift improvements, built at low cost, are entitled to scant consideration from an economical standpoint. Our past experience with traffic increases, both in number and weight, which has forced upon us a heavy outlay for straightening, widening and thickening our already built roads, makes it seem folly, in a state as wealthy as California, for the highway department to now enforce policies of inadequate road building. Our improvements must be planned with both eyes on the future.

It is believed that the U. S. Government, in granting federal aid to this state, is interested primarily in the completion of the federal aid highway system. The government has been most generous in permitting the state to collect federal aid on projects which are really reconstruction and widening of highways already classed as constructed. It would be presumptuous for us to assume that this generous attitude will be maintained unless the people of the state provide money for that which the government is primarily interested in, namely, the extension and completion of the federal aid highway system. Ten million dollars per year is necessary to make a satisfactory showing of completed state highways, including the federal aid system. We are unable to believe that the people of this state, who pride themselves on their good road system, are unwilling to authorize further state highway construction to this extent.

Respectfully,

R. M. MORTON,
State Highway Engineer.

APPENDIX B

LEGAL DEPARTMENT

By PAUL F. FRATESSA, Attorney

The work of the Legal Department of the California Highway Commission has more than tripled since the session of the legislature in 1925, due to the fact that the state has found it necessary to obtain so many rights of way.

A right of way department was established under the supervision of Charles M. Fanning, as right of way agent. Many parcels of land have been purchased, thereby requiring a great amount of work in passing upon the titles of the property involved. In addition to this, the following suits have been brought to condemn two hundred forty-six parcels of land:

People versus	County	Number of parcels involved	Number of defendants involved
Lettie P. Abbott et al. -----	Santa Barbara	87	142
Austin G. Akers et al. -----	Sonoma	26	79
Margaret K. Andrews et al. -----	Santa Barbara	23	54
David Arata et al. -----	San Mateo	33	59

Milos Mitrov Gopcevic et al. -----	Lake	2	3
W. A. Schmidt et al. -----	Los Angeles	1	2
Arthur W. Spencer et al. -----	Riverside	5	12

A number of the above cases have already been disposed of, but there are still eighteen unsettled.

The routine work of attending the meetings of the Commission and advising the engineering department on different questions that are continually arising has been promptly attended to.

The following applications have been filed and heard before the Railroad Commission:

Application for	County	Division
Underpass at Araz Junction -----	Imperial	VIII
Underpass at Atwater -----	Merced	VI
Underpass at Ben Ali -----	Sacramento	III
Underpass at Branagan -----	Orange	VII
Overhead Crossing at Carlsbad -----	San Diego	VII
Overhead Crossing at Del Mar -----	San Diego	VII
Underpass at Las Flores -----	San Diego	VII
Underpass at Mossdale -----	San Joaquin	X
Underpass at Oceanside -----	San Diego	VII
Underpass at Pismo -----	San Luis Obispo	V
Underpass at South San Francisco -----	San Mateo	IV
Underpass near Whittier Boulevard -----	Los Angeles	VII

PLATE XXI. Asphalt concrete pavement between Riverside and Ontario in Riverside County.

PLATE XXII. State Highway between El Centro and Holtville in Imperial County.

The following actions have been taken care of by this department:

H. C. Baker vs. Harvey M. Toy, etc., San Francisco County. Suit against contractor and Highway Commission to collect claim for material and equipment.

Benson vs. Standard Industrial Engineering Corporation et al. Los Angeles County. Suit against contractor for collection of claim.

J. A. Costello vs. California Highway Commission, etc. San Francisco County. Suit to recover additional amount claimed to have been lost by improper weighing of material.

C. M. Everhart et al. vs. A. Adams. Placer County. Suit to stop contractor from cutting trees.

Green vs. County of Madera et al. Madera County. Suit to secure possession of land deeded to state for right of way.

People vs. C. Harold Hopkins et al. Yolo County. Suit for purpose of compelling property owner to remove signs from fence on highway.

Hudson vs. State of California. San Mateo County. Suit against Commission for claim on Contract No. 318.

George F. Pearce vs. Harvey M. Toy. Lake County. Injunction suit attempting to prevent use of land for right of way.

O'Brien vs. Southwest Paving Co. et al. Los Angeles County. Suit against contractor and Highway Commission for removal of material from property.

People of the State of California vs. T. H. Ballard. Modoc County. Suit wherein court held that money from bond issue could not be turped over to the Highway Commission for expenditure.

People of the State of California vs. Charles A. Faul. Kern County. Damage resulting from collision, which was collected.

People vs. Orrill V. Freeman and Samuel J. Whiting. City and County of San Francisco. Suit against Freeman and Whiting, as contractor, to determine payment of funds.

People vs. Phillip Goudy. San Mateo County. Damage claim, tried by jury and judgment given for defendant.

People vs. Hartz et al. Contra Costa County. Suit to compel liquidation of claims on contract.

People vs. H. H. Harlan et al. San Luis Obispo County. Suit to collect damages due to collision.

A number of claims have been filed against the California Highway Commission for damages caused by collisions, but none of them have been paid as the bill providing for insurance on state automobiles failed to give relief, owing to the fact that the Attorney General held that the state had no authority to pay the premiums on such insurance.

Since the writing of the last report no actions have been filed for additional allowances on any contract, as fair adjustments have been entered into to the satisfaction of all concerned.

It is with extreme difficulty that this department has been able to function for the past eighteen months, as the work involved is far more than can be attended to by any one person.

In acquiring rights of way we have found that most of the property owners are reasonable. It is natural that their ideas of the value of their own property should be very much exaggerated, but they are usually willing to discuss the question of value and ultimately accept a fair price. Some property owners, however, have been entirely unreasonable and have demanded a hundred times as much as their property is worth.

Some legislation should be enacted to discourage this condition, such as requiring the assessor to take cognizance of the claimed values in assessing the adjoining property of the same owner for subsequent years.

As the law now stands it is doubtful whether the great benefits to be derived by the property owner, from the construction of a state highway, can be offset against the severance damage as can be done in the case of a city or county. Section 14 of article I of the state constitution should be amended by stating therein specifically that such benefits may be so offset against damages.

Great assistance has been rendered by all of the departments: thus making it possible to accomplish a great volume of work in the past two years.

APPENDIX C

NATIONAL FOREST HIGHWAY SYSTEM OF CALIFORNIA

By T. E. STANTON, Assistant State Highway Engineer

After several years of negotiation, the Secretary of Agriculture, on April 18, 1925, approved a system of forest highways for California.

Thus, since the last biennial report, the roads of the state upon which forest highway funds may be expended have been definitely determined.

Prior to 1912, federal funds for improvement of roads and trails within the national forests were very limited, consequently in the earlier years work had to be confined largely to the building of pack trails for the rangers to reach the more important localities.

In 1912, congress authorized the Forest Service to use for road and trail construction 10 per cent of the receipts from the sale of timber and other forest products. This appropriation is called the "Ten Per Cent Fund."

In 1916, congress made an annual appropriation for ten years amounting to \$1,000,000 a year.

The last appropriation under this act is therefore for the current year of 1926.

This appropriation is termed the "Section Eight Fund" and the expenditures are reimbursed to the treasury from the forest receipts.

Another appropriation of \$9,000,000 known as the "Federal Forest Road Construction" appropriation was made in 1919.

In 1921, congress appropriated \$15,000,000 additional for forest roads and trails. Of this amount, \$9,500,000 under the designation "Forest Highway Fund" was set aside for work on "forest roads of primary importance to the state, counties or communities within, adjoining or adjacent to the national forests." Such roads are known as "Forest Highways."

Thus congress recognized the obligation of the United States as a land proprietor to reimburse the local agencies for the loss of taxable revenues from areas permanently under federal control.

Over nineteen million acres, or approximately thirty thousand square miles, in California are under the jurisdiction of the United States government as forest areas over which the state has no jurisdiction as regards taxation but for which it must provide the necessary policing and through which, prior to the passage of the "Federal Highway Act," it was required to stand the entire cost of improving and maintaining the primary roads.

The other part of the 1921 act set aside \$5,500,000, called the "Forest Development Fund" for roads and trails, made primarily for the protection and development of the forests themselves.

Since the original act of 1921 congress has appropriated an additional \$12,000,000 for forest development work, and \$16,000,000 for forest highway work. The total appropriation since 1912 from all funds for forest road work to June 30, 1926, has amounted to \$67,088,330. Of this amount, California's share has been approxi-

PLATE XXIV. Bridge on the State Highway at Donner Summit in Nevada County. Constructed by the U. S. Bureau of Public Roads with Forest Highway Funds.

mately 14 per cent, or \$9,486,703.67. Forest road expenditures in California to June 30, 1926, from all funds appropriated have been \$7,534,365.97, leaving an unexpended balance of \$1,952,337.70.

The following tabulation summarizes the forest road appropriations to date, and the share apportioned to California from each:

FOREST ROAD FUNDS TO JUNE 30, 1926			
Appropriations		California	
<i>Fund</i>	<i>Total amount</i>	<i>Apportionment</i>	<i>Expended to June 30, 1926</i>
Ten per cent-----	\$ 5,088,330	\$822,131.23	\$818,486.05
Sec. 8, Act of 1916-----	10,000,000	1,410,247.03	1,326,304.01
Federal Forest Road, Act of 1919-----	9,000,000	1,151,156.41	1,131,882.11
Forest Development, Act of 1921-----	17,500,000	2,211,281.00	1,518,928.83
Forest Highway, Act of 1921—			
Fiscal year 1922-----	2,500,000	395,763.00	
Fiscal year 1923-----	7,000,000	1,065,108.00	
Fiscal year 1924-----	3,500,000	533,915.00

Totals -----	\$67,088,330	\$9,486,703.67	\$7,534,365.97
<i>Commitments:</i>			
Forest Highway—			
Fiscal year 1928-----			\$4,500,000
Fiscal year 1929-----			4,500,000
Forest Development—			
Fiscal year 1928-----			3,000,000
Fiscal year 1929-----			3,000,000

The same act of congress in 1921 which made the first appropriation of \$9,500,000 for expenditures in connection with the improvement of forest highways of primary importance to the states, counties or communities, provided that the system of forest highways on which the forest highway fund was to be expended should be jointly agreed upon by the United States Bureau of Public Roads, the Forest Service and the State Highway Commission.

Failure to reach an agreement upon the actual roads to be included, delayed the approval of the system until April 18, 1925.

The California Highway Commission for several years contended that only forest highways which were in the state highway system should be included in the system to be improved out of the forest highway fund. The Forest Service, however, desired to include a number of county roads which were not on the state highway system.

A compromise was finally reached, whereby all of the forest highways which were in the state highway system, amounting to 1293.5 miles, were approved, and in addition 759 miles of county highways which were in or adjacent to the national forests. The total mileage in the forest highway system finally agreed upon was 2052.5.

A program for the use of the forest highway fund is worked out in cooperation with the State Highway Department and standards of construction are agreed upon consistent with the location and importance of the road to be improved. Through a cooperative agreement, construction work on the "Forest Highways" is supervised by the U. S. Bureau of Public Roads, while the construction of the "Forest Development Roads" and the trails is carried out directly by the field organization of the Forest Service.

The state has no direct interest in the forest development roads or the expenditures thereon from forest development funds.

PLATE XXV. State Highway in Siskiyou County along the Klamath River. A Forest Highway Project.

PLATE XXVI. State Highway along Deep Creek Cut off near Big Bear Lake in San Bernardino County. A Forest Highway Project.

The "Forest Highway" work is done under a cooperative agreement with the State Highway Commission or the local county authorities, which agencies usually contribute to the cost of the construction.

The most notable piece of work which has been performed under a cooperative agreement between the Forest Service and the State Highway Commission is the grading and surfacing of the Smith River highway in Del Norte County, between Crescent City and the Oregon line. The expenditures on this project to June 30, 1926, totaled \$1,233,583 of which amount \$646,787 was contributed from the state highway funds, and \$586,796 from the forest highway funds. The length of the project was 26.7 miles, and the average cost per mile was \$48,465.

The most expensive project which has been constructed to date on the forest highway system was the 49-mile section of state highway along the Klamath River, from Orleans to Happy Camp, in Siskiyou County. This project cost a total of \$1,281,851, and was built almost entirely out of funds furnished by the federal government.

Other important forest highway projects built by the Bureau of Public Roads have been the grading and graveling of a 7.7-mile section of state highway in Modoc County, over Cedarville Mountain between Alturas and Cedarville, at a total cost of \$117,776; the grading and rock surfacing of a 10.9-mile section of state highway in Modoc County, between Adin and Adin Summit, at a cost of \$215,339; the grading and rock surfacing of a 12-mile section on State Highway Route 29 in Tehama County, from 8 miles east of Paynes Creek to Mineral, at a cost of \$257,374; the grading and rock surfacing of the Donner-Summit section of state highway in Placer and Nevada counties, at a cost of \$181,101; the grading and rock surfacing of a 11.5-mile section of state highway in Tuolumne County on the Sonora Pass road, between Soulsbyville Junction and Long Barn, at a total cost of \$141,562; the grading and rock surfacing of 15.6 miles of state highway on the Cuyama Lateral in San Luis Obispo and Santa Barbara counties, between Dutard Ranch and the Cuyama River bridge, at a total cost of \$657,789, and a 16-mile section of state highway in San Bernardino County, on the Crest Drive to Bear Valley, at a total cost of \$590,721.

Cooperative funds were furnished by the state on all of the above projects with the exception of the Adin to Adin Summit section and the Cedarville Mountain section, in Modoc County; and the Donner-Summit section in Placer and Nevada counties.

In addition to the above work on the state highway system, several important projects on the county system have been improved, more particularly the Murphy-Big Trees section in Stanislaus County, (now a part of the state highway system) 15.5 miles long, costing \$216,504; the San Marcos section in Santa Barbara County on which the expenditures to June 30 were \$176,508; the Swartout section in San Bernardino County, expenditures \$128,319, and the Yuba Pass section in Sierra County, on which the expenditures to June 30 were \$168,528.

Concurrently with the undertaking of the larger projects noted above which are primarily important from the standpoint of public travel, there are being completed by the Forest Service under the forest development road activities, a number of the more local roads. Generally these are built on more modest standards, and while intended

APPENDIX D

DEPARTMENT OF SURVEYS AND PLANS

By FRED J. GRUMM, Engineer of Surveys and Plans

It has been said that the highest aim of road making is "endeavoring to help make smooth the paths of humanity."

The primary and one of the most important steps in road building is location. It should be the best and most consistent so that construction becomes a permanent part of future improvement. If the principle is to prevail that "highways are built for traffic and not the traffic for the highways," the most intensive study of the road location problem is necessary. The conditions existing in the past, and still existing, of political selection, mass production and of road building overshadowing highway engineering, can no longer be countenanced and must be corrected. The greatest service for traffic can be accomplished only by location of the road based on engineering studies which include the economic considerations.

Deductions made by the U. S. Bureau of Public Roads from their traffic counts and studies in California during 1920 and 1922, indicate that at least 75 per cent of the urban traffic is carried on the state highways. This is evidence in itself that the roads in the state highway system, at least a large majority of the mileage, cannot be regarded as local institutions. It is true that these highways should render, and they do, a certain local service. The relative weight to be given to the through and to the local service, is one of the economic problems to be considered by the engineer. Local interests, including influential officials and citizens, usually urge the importance of the local viewpoint. It becomes the engineer's duty to uphold the wider interest of the state at large and this department has recognized these facts.

Classification as to relative importance of the highways in the state system, character of service, economy of first cost, maintenance and operation, traffic conditions, effect of alignment and grades, safety and comfort, soil classification, exposure, width of road and right of way, visibility, railroad crossing elimination, stream crossings, type of surface, possibility of future improvement and appearance are all included in the studies made by the department in the conduct of the work. Close cooperation of the other departments, especially the Construction Department and of the divisions, has made the efforts more effective.

The work of the department includes:

(1) The review and approval of allotments for the estimated cost of making surveys and plans. Authorization and allotment is issued through engineering work orders.

(2) Inspection and reconnaissance of road locations and routings. These inspections are made prior to and while the field work is in progress.

(3) Inspection of going work on construction for the purpose of studying effect of line and grade changes, slopes and shrinkage.

(4) Review and detailed examination of plans and reports.

(5) Approval of right of way negotiations.

(6) Approval of grade and line changes submitted under additional work orders.

(7) Compilation of data relative to surveys and plans.

(8) Examination and approval of projects to be constructed from Forest Highway Funds.

(9) Examination, with representatives of the Bureau of Public Roads, of Federal Aid Projects.

A greater uniformity of standards on roads of relatively equal importance has been brought about. The observing user of the road no longer has the opportunity to comment upon the difference in super-elevation or standard of curvature used on two modern projects in different sections of the state, where physical and traffic conditions are equal. The many comments that reach us show that improvement of the standards is noticed and appreciated and these improvements will become still more obvious as our reconstruction work is extended.

Economy in survey and plan work has been effected: In the total expense, by concentration on work actually programmed for construction; in the individual jobs, by the system of controlling allotments for the field and office work. Table No. 1 below shows the amount of preliminary engineering expense and its percentage of the total expenditures for the past biennial period.

TABLE No. 1.—PRELIMINARY ENGINEERING EXPENSE, SURVEYS AND PLANS.

(Showing percentage of Total Expenditures.)

Period	All divisions amount	Per cent	Central office amount	Per cent	Total amount	Per cent

During the first half of the calendar year, the greater portion of preliminary engineering expenditures are made, and the construction expenditures reach their highest point in the last half. The table, therefore, indicates that a marked saving has been effected in preliminary expenditures for the first half of 1926.

A detailed tabulation of all survey and plan expenditures would be too extensive to include herein, but Table No. 2 on the following page, showing costs on a number of completed projects, is representative of the work:

TABLE No. 2.—COST OF SURVEYS AND PLANS.

Division	New construction				Reconstruction			
	Number of projects	Miles	Amount	Cost per mile	Number of projects	Miles	Amount	Cost per mile
I.....	6	73.30	\$64,339.98	\$878.00	2	22.70	\$16,596.42	\$731.00
II.....	9	44.31	31,602.06	713.00	2	64.94	99,113.06	1,526.00
III.....	5	89.73	95,699.48	1,067	3	16.44	5,702.42	347.00
IV.....	4	44.10	53,789.14	1,220.00	15	64.20	25,426.63	396.00
V.....	3	20.71	14,018.65	677.00	3	23.10	19,602.49	849.00

Total and average.....		440.30	\$382,509.14	\$869.00		429.60	\$264,011.62	615.00

A discussion of the cost of a few individual jobs with explanation of their character, may be of interest.

The cost of surveys and plans for the reconstruction of the Pacific Highway in the Sacramento River Canyon from Redding to Dunsuir, approximates \$1,570 per mile. The surveys of this project included a revision of the existing highway, and for comparison, a completely relocated line. Preliminary surveys cover more than twice the length of the location finally adopted. The entire location is through rugged country and the grading quantities average about 45,000 cubic yards per mile. Figure 1 shows a comparison between the suggested revision of the old highway and the relocation of a portion of this project at the Salt Creek Summit as finally adopted. The studies added approximately \$2,000 to the total cost of the surveys, but effected a saving of \$40,000 in construction. The high cost of the preliminary work was justified.

Another project on which the preliminary engineering costs are about \$1600 per mile is the Yosemite road from Briceburg to El Portal. A location of this seventeen mile stretch had been made which, for a large part of the distance, was rather high up on the slopes of the canyon. After thorough study by the department and engineers of the division, the decision was reached to locate the road lower in the canyon. A new location was made and the resulting road affords excellent alignment, easy water grades and ample width. The lower location made it possible to place more of the width in fill which catches on safe benches. It considerably reduced the waste which would have resulted from a location higher up the slope where a greater bench cut was necessary for the required width of roadway. The construction is heavy grading, averaging about 55,000 cubic yards per mile.

Figure 2 illustrates the saving in construction cost and marked improvement effected on another project as a result of studies by the department. The improved alignment and grades on the adopted location would, in themselves, warrant an increased construction cost. The elimination of two stream crossings, together with the reduction in construction expense, certainly justifies a higher cost of surveys and plans.

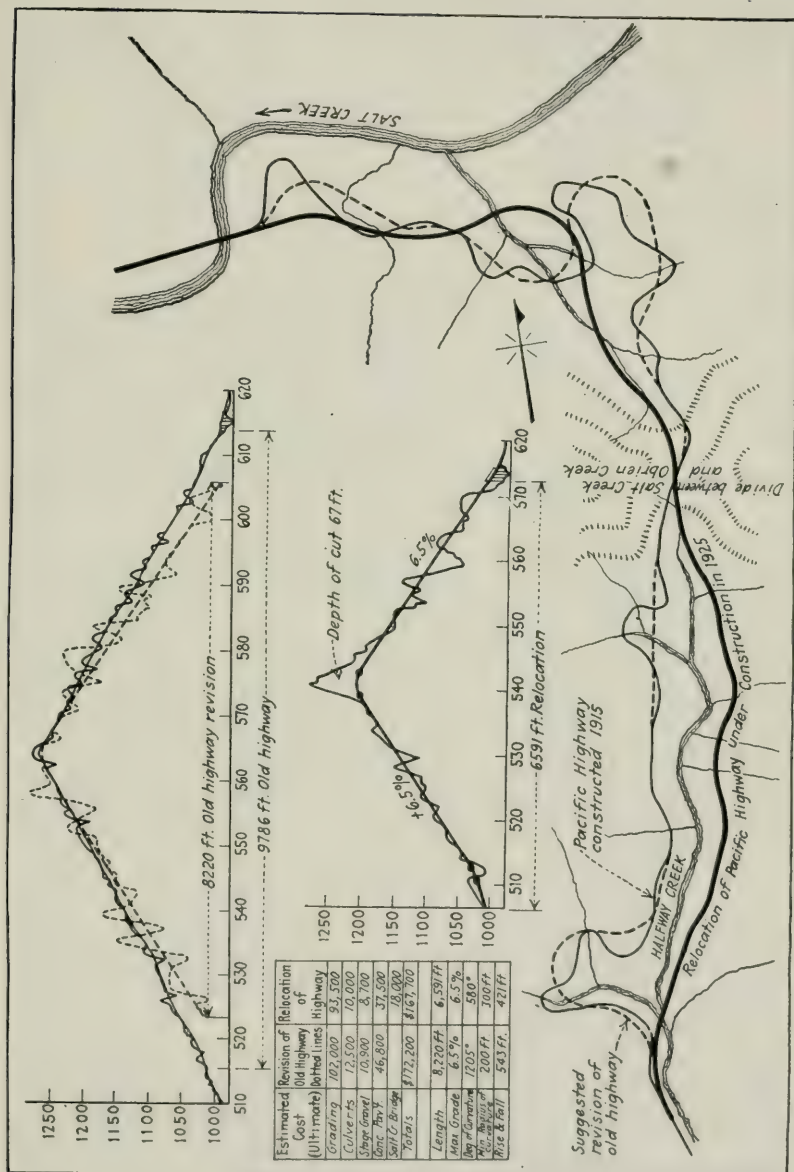

FIGURE 1. Relocation over Salt Creek Summit in Shasta County.

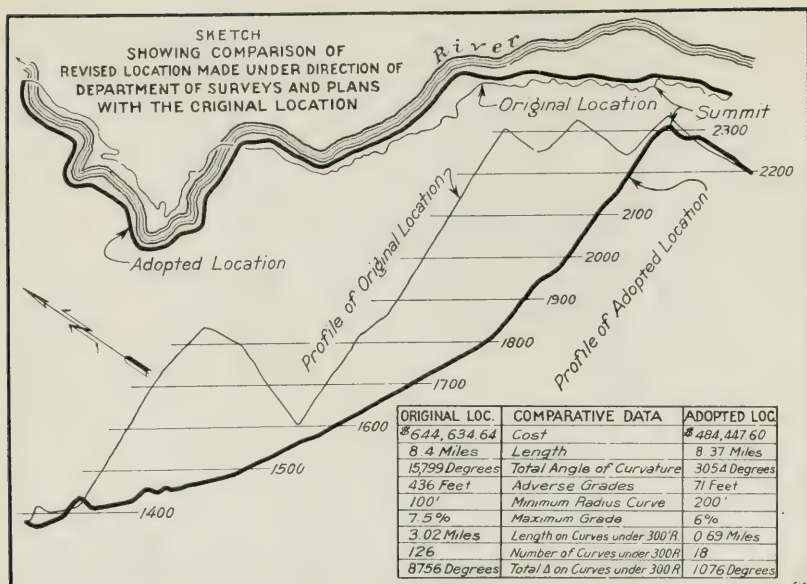

FIGURE 2. Comparison of Revised and Original Location.

Increased efficiency has made it possible to produce a higher standard of road location with no corresponding increase in the percentage of preliminary expenditure. Although the cost of surveys and plans, as shown above, may appear high, they have resulted in a saving in construction far in excess of the preliminary expense. The combination of higher survey cost and reduced construction expense should logically mean an increased percentage for preliminary expenditure. That this increase is not appreciable, is ample proof of more efficient work.

The location survey cost of a 35-mile stretch east of Mojave and another one of 36 miles north of the same place was about \$20 per mile. This does not include completed plans, but these should not exceed \$50 per mile more.

The 7.3 miles from Williams westerly cost \$140 per mile for surveys and plans.

The preliminary expenditure for the reconstruction job from Turner's Station through Manteca to the southerly county line, was \$220 per mile. The few examples cited above indicate the varied character and conditions encountered.

In March, 1925, a Manual of Instructions of the Department of Surveys and Plans was published and distributed. It covers in detail the matters relating to surveys, plans, right of way, survey reports, grade compensation, superelevation, etc., and with the included field tables, is a convenient hand book for both locators and office men. The instructions have been amplified from time to time.

Chapter 234 of the 1925 statutes provides that the California Highway Commission may act as consulting engineer for counties, municipalities or road districts desiring such service. Several requests involv-

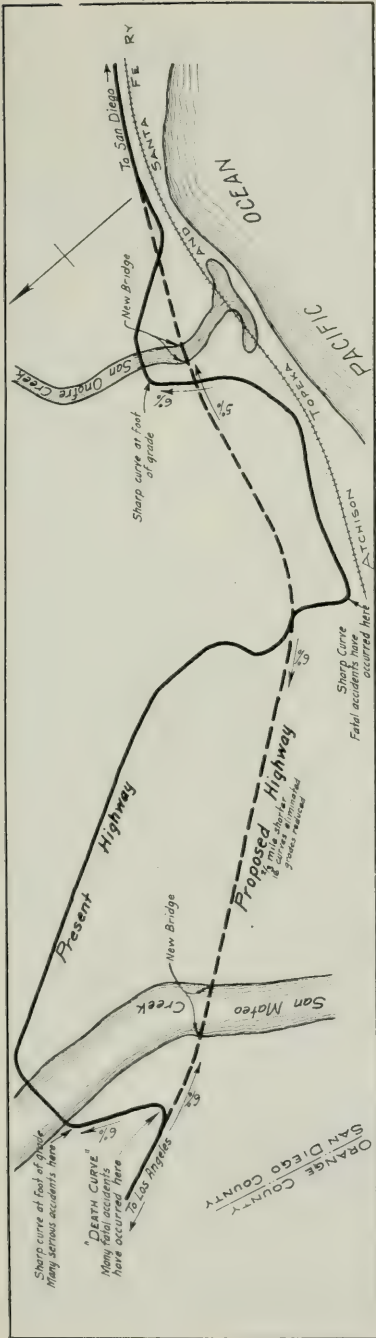

FIGURE 3. Relocation of Coast Highway in San Diego County.

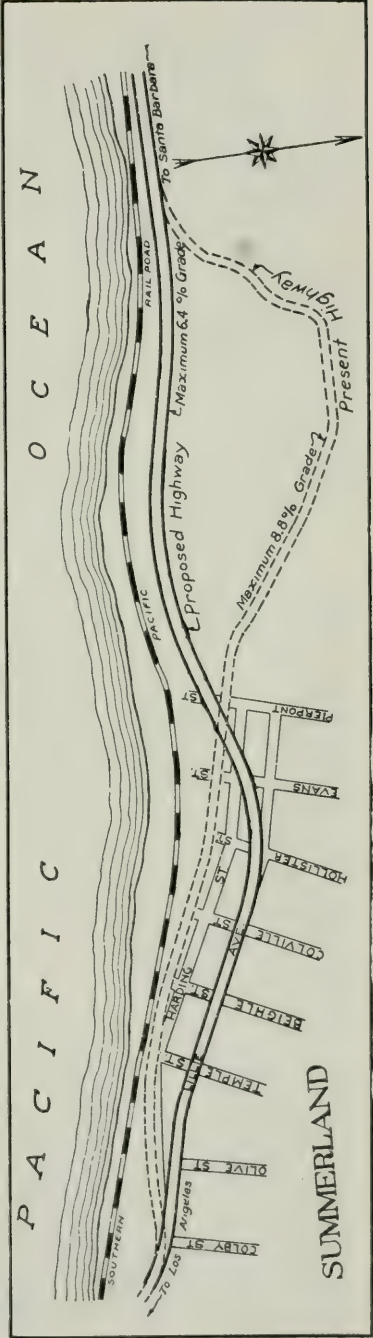

FIGURE 4. Relocation of State Highway over Ortega Hill in Santa Barbara County.

ing routing or location of roads have been received and engineers of the department have made the necessary investigation, studies and reports.

The most important of these was on a routing of a highway for about 250 miles on the west side of the San Joaquin Valley. The studies attendant on this problem included not only the generally accepted principles of highway location but also the economic considerations of through and local service, relation to railroad service and future development of both traffic and adjacent land. The investigation developed the possibility of a through traffic highway between the larger centers of population, which could at the same time be made to serve local traffic of a large area by introducing short laterals. The report discussed and pointed out the serviceability, superior standards of alignment and grade, economy of construction, economy of operation effected by shortening of distance over existing routes, relief afforded from congestion on present roads, stimulation to development of new lands, possibilities for progressive expansion and future improvement, and suggested aesthetic treatment.

In the past, the commission has enlisted the aid of the county authorities to acquire the necessary rights of way. The contribution of the counties in this respect has been very substantial. With the reconstruction and widening of the important highways and the attendant necessity for additional right of way width, the commission has gradually taken over the work of acquiring right of way. The division engineers have designated men in their respective divisions to handle the detailed duties and negotiations. Final approval of agreements and expenditures for right of way is made by the department.

In many localities, following the improvement of the highway and the consequent increase in land value, the abutting property is being subdivided. The state law provides for approval of subdivisions outside of incorporations by the board of supervisors of the county. In order to insure proper alignment of the road and adequate width of right of way where state highways are concerned, the department submitted to the various boards of supervisors a request that such subdivisions have the approval of the State Highway Engineer before being accepted. The county boards have, in nearly all cases, responded and are cooperating with the commission to the desired end.

Elimination of grade crossings has received considerable attention by the commission. A classification of the existing grade crossings made in 1922, gave primary place to crossing elimination by highway relocation. Several instances of this type of elimination are worthy of attention.

The elimination of the grade crossings at Cardiff and Encinitas on the Coast road in San Diego County, was accomplished by relocation of the highway on the west side of the Santa Fe Railway. Relocation not only removed the grade crossings, but reduced the number of curves from eight to four, lowered maximum grade from seven to less than five per cent and shortened the distance 350 feet. Plate XXX is an airplane view of this situation.

At Barstow a dangerous grade crossing over the freight yard tracks of the Santa Fe, and two crossings of the main line tracks, were eliminated by relocation of about one and one-half miles of highway. Figure 5 illustrates the conditions.

PLATE XXX. Relocation of State Highway in San Diego County, eliminating two railroad grade crossings.

Another project is now being planned for the removal of two grade crossings at Herndon in Fresno County. This relocation, shown in Figure 6 also accomplishes a saving in distance and a noticeable improvement in alignment and grades.

Instances of location, which are examples of the high standards now required, are numerous on the state highway system. They are perhaps more forcibly brought to the attention on relocation jobs such as the work in the Sacramento Canyon or on the Coast road in San Diego County, where a comparison with the old highway is possible.

When we consider the more critical attitude of the road user and the increasing demands for safety and service, in both of which he is justified, it is imperative that the engineer anticipate the future use of highways in so far as location is concerned. He must plan so that present expenditures are not misplaced. The importance of the roads in a state highway system requires that they be considered not as projects in themselves, but as part of the system, and the location must be made for the good of the public at large rather than only for a section of the state.

APPENDIX E

CONSTRUCTION DEPARTMENT

By C. S. POPE, Construction Engineer

GENERAL

The organization and distribution of duties of the Construction Department were described in the report on the work of this department as set forth in the Fourth Biennial Report of the Highway Commission and need only be mentioned herein by reference.

The personnel and organization scheme of the department remains practically the same with the exception that even more authority and independence has been delegated to the Testing and Research Laboratory. The relative contacts of the Construction Department with other state highway departments is shown in diagram form herein.

In the natural order of operations of the Construction Department, the analysis of the materials and examination of the physical conditions affecting the work are preliminary to the planning and execution of projects, and are therefore given precedence in place in this report.

POLICY

The efficiency of a highway organization, like that of a railroad, is judged, or should be, by the expenditures required for accomplishing the purpose for which highways, including their appurtenant structures, are built.

This purpose may be briefly defined as providing avenues for transportation at the least possible cost consistent with adequate service.

Opinion and prejudice have no more place in highway design, construction and operation than they have in the operation of any public utility.

The funds provided by the people for highway construction and maintenance are a public trust and should be administered as such.

It is the consistent purpose and policy of the Construction Department not only to so guide and advise division engineers that highways are designed for economy of first cost and subsequent maintenance, but also to secure better and more uniform workmanship in the detailed features of construction.

ADMINISTRATIVE PRACTICE

Delegation of Authority. The delegation of authority to the various members of the construction organization by the head of the department carries with it the responsibility for initiative in performing the duties involved.

Through conference, the various principles to be followed are outlined and at times suggestions made as to details, but in general it is thought that greater initiative and growth will be obtained from the individual if he is merely guided in major policies and is left to develop the details and handle his work after his own methods.

PLATE XXXII. Constructing concrete pavement between Healdsburg and Santa Rosa in Sonoma County.

PLATE XXXIII. Placing rock borders on State Highway in San Bernardino County.

Specialized Supervision. One of the functions clearly established by the Construction Department is that of specialized supervision.

Instead of attempting to consider engineers in charge of construction as universally adaptable to all classes of work, a careful selection is now made for each different kind of work.

Engineers particularly competent in special classes of work are shifted from one division to another as need arises. At the same time, a system whereby inexperienced engineers are given an opportunity for preliminary training is in effect. Under this system, an engineer acts as an extra assistant or student for a short time on work of the same kind as that for which it is desired to train him. This method tends to insure a supply of engineers trained in a uniform manner.

Recognition. Not the least of the accomplishments of the Construction Department has been the establishment of the principle of recognition of the work of engineers who have personally carried to a successful issue the work assigned to them.

Improvements in field control or construction methods which may have been suggested by the Construction Department but which were actually developed and carried out by resident engineers or their assistants, are credited to the man actually doing the work.

Manual of Instructions. For the guidance of highway employees, the Construction Department issued in March, 1925, a Manual of Instructions of the Construction Department, which covered all of the general orders heretofore issued governing construction. This manual is of considerable value as a hand book and will, no doubt, in future editions, fulfill a most useful purpose.

LABORATORY CONTROL

By C. L. McKesson, Materials and Research Engineer.

The work of the Testing and Research Laboratory may be said to comprise four major functions.

Materials Surveys

Materials Control and Field Tests

Specific Engineering Investigations

General Researches and Publication of Reports

MATERIALS SURVEYS

As soon as information is at hand that a project is under consideration, this department undertakes a study of materials available for the particular work. The records of the laboratory have been so classified and arranged that a record of materials tested in each locality is available. In many instances it is found that sufficient information is already available to indicate sources of supply for materials and to suggest modifications, if any, which are required to adapt the standard specifications to local conditions in so far as materials are concerned. In some cases it is necessary to request additional samples of material from the field forces or to make a special study of availability of materials with representatives from the division office. Preliminary

PLATE XXXIV. State Highway in San Bernardino County, one-half mile east of Barstow.

PLATE XXXV. Cementing test specimens prepared for compression tests.

examinations of subsoils are made by resident engineers and samples taken by them are checked by laboratory analyses. Soils are analyzed for shrinkage, clay content, moisture equivalent, and the presence of harmful sulphates. Should adverse soils be encountered, a recommendation is made as to their proper treatment before specifications are written.

MATERIALS CONTROL

Concrete Aggregates. Concrete aggregates from the various commercial producers have been tested for quality and check tests are made from time to time when considered desirable. Tests for grading are made on the work, each job having equipment for field tests.

Steel. The most important change in the control of materials during the last two years is in connection with tests of steel and other metal products for use in highway work. Heretofore, steel was sampled on the projects and, due to the fact that material is cut to size and fabricated before shipment, it was difficult to secure samples required for complete tests. Comparatively few samples were taken and the record of steel and other metal used was incomplete. The present practice requires each producer supplying material to keep metal products intended for state highway work segregated by heat numbers and to furnish mill analyses and tests on the materials. Samples are also taken from the heats and tested in our laboratory. The materials found satisfactory are released by heat numbers and may then be shipped to any state highway work with proper identification. The necessity for sampling in the field is eliminated and when the material reaches the work, information accompanies it showing the material to have been previously tested and accepted. The present method insures accurate control of material with a minimum amount of sampling and testing.

Metaling. During the last two years a cementation test has been developed which is now used as a standard test and which seems to give a satisfactory indication of the cementing value of gravel and crushed rock used in surfacing work on road metaling. The test is briefly described as follows:

Material passing the $\frac{1}{2}$ -inch circular opening screen is removed from the sample as received from the field. The cementing quality of road material is dependent upon the quality and character of the finer material, and therefore, this finer material alone is used in the test. Screen analysis is made of the material and, if it is found to contain less than 15 per cent passing the 100 mesh sieve, enough of the material is pulverized to supply the deficiency and to bring the fines up to this requirement. It has been found that material containing less than 15 per cent passing the 100 mesh does not show satisfactory binding properties regardless of the character of the material. The $\frac{1}{2}$ -inch material thus selected for the test is ordinarily typical of the finer material which will be sent to the work from the quarry or gravel pit.

The samples prepared as above are moistened and mixed as in the preparation of a concrete sample. The amount of water used varies with the character of the material, but usually ranges from 10 per cent to 12 per cent. After mixing, the material is tamped into $4\frac{1}{2}$ -inch cubical molds and is dried in the sunshine or in a warm oven at a temperature of about 100 degrees F. until it is stiff enough to permit removal from the molds. Drying is then continued until the specimen ceases to lose weight, after which it is capped with plaster paris and tested for compression in the Universal testing machine. The cementing value is taken as the average compressive strength

per square inch of three specimens. A wide variation of results is obtained with different materials but fairly uniform results can be obtained in repeated tests of the same material. The strength developed ranges from zero to about 350 pounds per square inch. Strengths of 100 pounds to 150 pounds are not unusual and are expected in desirable surfacing material.

Plate XXXV shows cementing test specimens ready for test machine.

Volume of Work. Following is a tabulation showing the number and character of routine tests made in the physical and chemical laboratory:

<i>Material and tests made</i>	<i>12 Years (To Nov. 1, 1924)</i>	<i>2 Years (Nov. 1, 1924, to Oct. 31, 1926)</i>
SAND—		
Grading	1,720	736
Compressive strength.....	1,298	534
Tensile strength.....	608	Test discontinued
Colorimetric tests.....	630	346
Weight per cubic foot.....	1,744	223
Specific gravities.....	618	162
Wash	1,070	482
ROCK AND GRAVEL—		
Gradings	1,784	617
Specific gravities.....	971	513
Abrasion	248	809
Cementing value test.....	None	239
Weight per cubic foot.....	730	106
CONCRETE—		
Field specimens—compressive strength and weight	2,691	5,730
Laboratory specimens fabrication, compressive strength and weight.....	4,449	132
ASPHALT MIXTURES—		
Complete analysis, physical.....	3,185	2,178
ASPHALT CEMENT AND ROAD OILS—		
Complete physical analysis.....	2,858	389
PORTLAND CEMENT—		
Set tests.....	3,074	3,537
Fineness tests.....	3,074	1,847
Soundness	3,074	3,606
Tensile strength.....	3,074	3,543
Compressive strength.....	None	76
STEEL AND BRONZE—		
Physical tests—tension and bending.....	46	1,396
Chemical analysis.....	54	342
CORRUGATED METAL PIPE—		
Chemical tests.....	497	1,042
SOILS—		
Complete analysis.....	204	307
PAINT—		
Complete analysis.....	312	173
WATER—		
Complete analysis.....	2,831	2,318
PAVING BLOCKS AND CREOSOTE PILING—		
Physical tests.....	None	3
Total number of tests.....	40,844	31,386

The above tabulation does not include special tests made in connection with researches such as cores drilled from pavement, waterproofing tests, etc.

Miscellaneous tests were made on other materials such as glue, oils, asphalts, paper, blankets, coal, and other materials commonly used in institutions throughout the state and are not listed in the above table.

Attention is called to the fact that routine grading tests of sand and gravel are now made in the field several times daily on each job. These are not included in the above tabulation. Making such tests in the field effects a great saving in time and enables the laboratory forces to devote more time to qualitative tests and to laboratory researches.

Laboratory grading tests listed above were made in connection with complete tests of the materials involved. There has been a large increase in the number of quality tests of sand, rock, and gravel. There has been a decrease in the number of laboratory made concrete specimens, but a much larger increase in number of tests of field concrete.

SPECIFIC ENGINEERING INVESTIGATIONS

Three rather extensive special investigations undertaken since the publication of the last biennial report are as follows:

Concrete Curing. The cooperative study of concrete curing conducted in 1924 by the California Highway Commission and the Structural Materials Research Laboratory of Chicago was supplemented in 1925 by a series of tests under ordinary field conditions. In the study seven sections of 6-foot concrete shoulder, aggregating about one mile in length, were cured by covering with earth and wetting for periods from zero to 14 days. Cores were drilled from the pavement at ages of 14, 21, 28, 90 days, and one year. These cores were capped and tested in the laboratory and comparisons made of results with the various periods of wet curing. These tests confirmed the previous investigation and indicated that seven or eight days of watering provided sufficient moisture to insure proper hydration of cement in pavement. The tests also indicated that the watering period may be

FIGURE 7. Result of Field Tests—Curing Concrete in Pavement.

reduced to as little as three days when necessity arises without appreciably lowering the strength of the concrete. Figure 7 shows the comparative strengths of cores cured with different watering period. Figure 8 shows the relative efficiency of various methods of curing in cooperative tests of 1924.

FIGURE 8. Curve Showing Relative Efficiency of Various Methods of Curing.

7. 2" Earth, wet twice daily for 14 days.
8. 2" Earth, wet twice daily for 14 days, 2% admix. CaCl_2 .
9. 2" Earth, wet twice daily for 14 days, 1.10 consistency.
10. 2" Earth, wet twice daily for 14 days, 1.25 consistency.
11. 2" Earth, wet twice daily for 7 days.
12. 2" Earth, wet twice daily for 7 days, 2% admix. CaCl_2 .
13. 2" Earth, wet twice daily for 3 days.
14. 2" Earth, wet twice daily for 3 days, 2% admix. CaCl_2 .
15. $1\frac{1}{2}$ lbs. CaCl_2 , per sq. yd.
16. 2 lbs. CaCl_2 , per sq. yd.
17. $2\frac{1}{2}$ lbs. CaCl_2 , per sq. yd.
18. $2\frac{1}{2}$ lbs. CaCl_2 , per sq. yd., 2% admix. CaCl_2 .
19. $2\frac{1}{2}$ lbs. CaCl_2 , per sq. yd., washed off after 3 hrs.
20. $2\frac{1}{2}$ lbs. CaCl_2 , per sq. yd., washed off after 1 day.
21. $2\frac{1}{2}$ lbs. CaCl_2 , per sq. yd., wet earth subgrade.
22. $2\frac{1}{2}$ lbs. CaCl_2 , per sq. yd., dry earth subgrade.
23. $2\frac{1}{2}$ lbs. CaCl_2 , per sq. yd., 1.10 consistency.
24. $2\frac{1}{2}$ lbs. CaCl_2 , per sq. yd., 1.25 consistency.
25. 3 lbs. CaCl_2 , per sq. yd.
26. 5 lbs. CaCl_2 , per sq. yd.
27. N. Brand Na_2SiO_3 —one application.
28. 1 part water— $1\frac{1}{2}$ parts Na_2SiO_3 —three applications.
29. 1 part water—3 parts Na_2SiO_3 —three applications.
30. $2\frac{1}{2}$ lbs. CaCl_2 , per sq. yd., in concrete forms.
31. 2" Earth, wet twice daily for 28 days.
32. 2" Earth, wet twice daily for 90 days.

All of the tests indicated that the concrete pavement of the quality now produced on state highway work may safely be opened to traffic in 14 days under normal temperature conditions. Possibly under unusually favorable conditions the curing period may be appreciably reduced.

Culvert Investigation. During the fall and winter of 1925-26 field inspections were made of more than 5000 culverts. A large percentage of these culverts were of corrugated metal and installed from 1910 to 1925. The culverts were rated as to their deterioration, and the inspection included the more important details which were believed to affect the probable life of a culvert. Several hundred culvert samples were taken using a core drill especially designed for the work. The discs thus obtained provided a means for determining exterior condition of culverts in place, and also provided material for metal analyses.

The survey included an examination of the soil and its relation to condition of the culverts. It was found that many soils were adverse to the installation of metal culverts and in such cases it was apparent that protective measures should have been taken. As a result of this investigation, during the past year it has been the custom to coat metal culverts which are to be used in adverse soils with a heavy surface of asphaltic cement.

The field data collected and results of metal analyses are being compiled, classified, and studied with the expectation that valuable information may be obtained regarding probable service of various types of culvert.

Oiled Surfaces and Other Bituminous Treatments. A study of treatment of gravel and crushed rock surfaces with asphaltic oil was begun in May, 1926, by the California Highway Commission in cooperation with the U. S. Bureau of Public Roads. The work which is under way at the present time includes the inspection of surface treated roads in Oregon and California, and of other bituminous treatments in which crushed rock and gravel surfaces may be economically used. Laboratory studies are being made of road samples and of bituminous material to determine characteristics which indicate their suitability for use in surface treated roads.

BLUE PRINT AND PHOTOSTAT DEPARTMENTS

During the past biennium the Blue Print and Photostat Departments have continued to operate at the laboratory as a part and under the direction of the Construction Department. In the Biennial Report of 1924 the details of the work and personnel were fully explained and there have been no changes since that time.

FIELD SUPERVISION AND GENERAL INVESTIGATIONS.

Soil. Examination of soil is made not only preliminary to construction but also during construction. Determination of moisture equivalent and lineal shrinkage have been found the essential features and are made by the resident engineer on all materials entering into the subgrade or which may be used in fills. If the material is found to be adverse, provision is made for importing material even though the expenses may be considerable. We believe that pavements should be insulated from adverse soils and for this purpose it is usual to employ a bed of road metal not less than 6 inches in thickness.

PLATE XXXVI. Mountain Springs Grade in San Diego-Imperial Counties, before widening.

PLATE XXXVII. After widening State Highway on the Mountain Springs Grade.

The prevalent adverse soil in California is adobe but it usually overlies a shale which makes a satisfactory roadbed, so that the cure for the adobe can often be readily obtained.

In case of soil containing large amounts of sulfates, the practice has been to insulate concrete pavements by covering the subgrade with a heavy coat of asphaltic oil.

Grading. Studies have been undertaken during the last two years to secure greater economy in heavy grading construction. The matters which have been given most attention are the slopes which are proper in cuts and fills and the amount of shrinkage or swell in embankments. A study of slopes already used successfully usually gives a satisfactory index to the slopes which will be proper. The height of cuts has a very considerable influence on the slope and it has become the practice to break back to flatter slopes where cuts are high and not to attempt to use one slope rate for the full height of a cut. Angles of repose of different materials are being studied as this is extremely important for the proper design of embankments and proper balancing of materials in mass diagrams.

The amount of shrinkage and other characteristics of soils and other materials under different methods of construction is also being studied, and it is hoped to develop field laboratory methods of determining, not only the ultimate shrinkage or other behavior of any given material, but also gain more exact information on the cost of excavating and handling, which will be of very great value in economical construction of graded roads. Indiscriminate and excess excavation and wastage of materials is being carefully considered in cooperation with the Surveys and Plans Department and considerable savings are possible from time to time through line or grade changes at the proper time.

Culverts. The department is constantly on the alert to employ the best engineering practice in regard to culvert installation. As was outlined on page 71 of this report, the laboratory is at present studying and applying the information obtained during the past biennium on its extensive survey covering thousands of the culverts throughout the state.

As a construction study, the department has recently investigated the design of culverts in mountain locations where the rate of grade is considerably steeper than that usually considered in culvert design. As a part of this study, a standardization of the theories of computations of run-off has been attempted and some progress has been made toward a more economical design of culvert. It is probable that during the year, new designs of bell-mouthed culverts with tapering or with draft tube barrels will be introduced for purposes of economy in designing large culverts.

The present construction standards for culverts include corrugated metal pipe of the pure iron and coppered steel types, sectional reinforced concrete pipe and reinforced concrete boxes or arches. No brick or vitrified pipes are used in state highway construction at this time.

Metal culverts have been found extremely useful where difficult installations are necessary as in mountain roads but on highways where transportation of materials for concrete is not difficult there is an increasing use of reinforced concrete culverts. It has been found

PLATE XXXVIII. Four inch concrete base laid in 1915, in Solano County, before being surfaced with asphalt concrete in 1923.

PLATE XXXIX. Showing condition of asphalt surfacing at same location in 1926, after carrying 4,600,000 tons of traffic.

desirable to place settlement joints at intervals of 20 feet in heavy reinforced concrete culverts because of the difficulty of predicting uniform bearing power throughout the entire length of a long culvert subjected to heavy loading.

Rock Surfacing. A large mileage of fine rock surface has been constructed on the state highway system. The maximum size of stone has been about one inch. The road metal must contain at least 40 per cent of material finer than one-fourth of an inch and the fine material must have a binding power not less than 70 pounds per square inch. The fine rock roads with mulch surfaces have given excellent results and provided speedy avenues of transportation through wide stretches of desert country, but the dust nuisance has become the subject of so much criticism that various methods have been resorted to to alleviate this condition. An extensive use of calcium chloride has taken an important place in the work of one or two of the divisions for a year or two but this treatment seems to be going into disfavor and is being replaced by various methods of applying oil. The most successful of these appears to be what is popularly designated the "Oregon System" since it has had a large and so far successful use in that state. This system consists of embodying a carefully selected filler of suitable clay or other material into the road surface and as soon as the road is hardened, coating it with a light spread of oil containing about 65 per cent of asphalt. If the procedure is carefully worked out and the details of construction rigidly adhered to, it gives excellent results. A road which is oiled before it is in proper condition to receive this treatment usually gives unsatisfactory results.

The state has found it necessary to build some roads with volcanic cinders and has found that when properly bound they give satisfactory results for light traffic. Experiments in oiling these cinders are at present under way.

Macadam. The use of true waterbound macadam by the state is practically nil at this time. Some of the older macadam surfaces which have not been protected have shown serious deterioration and as rapidly as possible have been given a coat of heavy asphaltic oil and screenings to prevent further ravelling.

Bituminous Macadam. Recent studies have been undertaken with regard to the use of bituminous macadam for surfacing of light traffic concrete highways which have shown signs of distress. A number of short sections of concrete highways have been surfaced with bituminous macadam, and the treatment has usually been quite satisfactory. Encouraging results have been had from some of the counties which have treated some of the county highways with bituminous macadam surfaces.

In the past year, the specifications for bituminous binder have been amended to include certain requirements in regard to ductility which were not heretofore in use. The results of this change are being watched with considerable interest.

Asphalt Concrete. The advance in asphalt concrete construction consists in the construction of pavements carrying a large percentage of stone dust and a small percentage of asphaltic cement. Recently, also, the asphaltic surfaces have been constructed without seal coat of

PLATE XL. Constructing asphalt concrete pavement across the Sand Hills in Imperial County.

any kind although on a few contracts a seal coat of stone chips coated with asphaltic cement has been used with satisfactory results.

It is now common practice to run the vialog over asphalt concrete surfaces during construction in order to check up the care being exercised in the laying of the surface. The results of the use of this machine provide an incentive to the resident engineer to secure smoother work and there is usually a decreasing roughness as the job progresses.

Asphalt concrete is being used not only for surfacing of old concrete highways or old macadam but also for the construction of shoulders in proper locations. A number of highways have been surfaced during the year with asphalt concrete having a minimum thickness of one and one-half inches where the base has been satisfactory. The usual minimum thickness employed, however, is two inches and in some cases, where the base has badly deteriorated, the thickness has been made four inches with economical results.

The most notable use of this material during the year has been over the sand dunes in the southern part of the state. This job is probably the most interesting piece of paving constructed during the biennium. Owing to the continual shifting of the sand, it was decided to construct an embankment as high as the highest dune in the vicinity and this plan required the use of over 40,000 cubic yards of sand per mile. The slopes of the embankments are oiled to prevent them from blowing away and an asphalt concrete surface six inches in thickness with nine-inch edges and twenty feet in width has been constructed. The work was carried on without regard to the weather, and men and equipment continued to work with the temperature as high as 120 degrees F. This construction closes the last gap of impassable road across the desert from Yuma.

Portland Cement Concrete. The old method of specifying proportions in concrete has been eliminated and the requirements are now that each cubic yard of concrete in place shall contain a certain number of sacks of cement. This has resulted in very much better conditions as far as both the state and the contractor are concerned. The contractor is able to figure his cement accurately and the state is able to make proper studies of the strengths of concrete which can be obtained.

The methods of proportioning have been more closely standardized and the typical plant of today is designed to proportion sand by weight and the stone by either weight or volume. This arrangement lends itself readily to making corrections for moisture in sand and stone and generally gives close control on the strength of the concrete. The introduction of recording scales for batches may make it possible to pay for Portland cement concrete by weight as is now done with asphaltic concrete.

Studies are continued on the strengths of different cements so that it is possible to predict with reasonable accuracy the strengths of concrete which may be hoped for. It does not yet seem time to buy concrete on the strength basis, since there has been notable progress on the part of cement manufacturers to raise the character of their cement to the standard of the strongest brands.

The quality of concrete used in paving construction has steadily improved in strength and uniformity and with the information now at hand in the laboratory there is no good reason for any great variation in the results obtained. The state has now trained concrete inspecting

engineers who understand the proper theory of securing concrete of high compressive strength and who are very much interested in the results obtained on their work. This interest and cooperation has made possible the construction of concrete highways which possibly rank as high in all desirable qualities as those constructed anywhere.

The Construction Department believes that predicting strength of concrete is a matter which can only be told from an analysis of all the materials proposed to be used in the construction. It has been possible by such studies to secure field concrete of which 85 per cent of the specimens will crush with an error of not more than 10 per cent from the compressive strength desired. We have been unable to locate any extensive series of experiments based on the fineness modulus or the water cement ratio theories which have given a control as close as the figures above noted. The practical theory on which we base our concrete strengths is that the strength of the concrete is only a function of the strength of mortar and that good mortar requires good cement and good sand and that with this factor fixed, the matter of securing good concrete is purely one of careful attention to details and proper manipulation.

In spite of the high strengths obtained there is a considerable amount of cracking in concrete highways, and designs have been changed to require the construction of one-half inch expansion joints at fifty-foot intervals and also provide for the use of dowels at all expansion joints. A new development during the year has been the construction of a center joint by means of a weakened plane. A sharp edged form is forced into the pavement along the center line leaving a slot about two and one-half inches deep and also an indented space about six inches wide in the surface of the concrete which afterwards is filled with asphalt cement to provide in one, a crack filler and a center marker. The results so far obtained have been excellent. It is found that the weakened plane joint produces cracking at the locations intended.

The standard sections for concrete pavements call for a thickness of 6 inches at the center and increasing, in the outer 3 feet, to 9 inches at the edges of each 10-foot strip. In many recent contracts, the thickness of the center has been made 7 inches when excessively heavy traffic could be foreseen.

Our use of reinforcement in the pavement is increasing. An experimental section some four miles in length is being laid using various types of reinforcement and also various designs and spacing of expansion joints and shrinkage joints. A study of former experiences in the state in reinforcing concrete pavements has been made during the biennium with conclusions generally favorable to use of reinforcing.

Vialog. The use of the vialog for determining the roughness of pavements as completed has continued throughout the biennium. Repeat records are also run on a number of selected pavements in each division at yearly intervals. By reason of this instrument more careful workmanship in pavements has resulted in greatly increased smoothness.

A comparison of average vialog results obtained during the last three years is shown below:

Type of pavement	Roughness index per mile		
	1924 inches	1925 inches	1926 inches
Portland cement concrete	19	14	8
Asphaltic concrete	20	23	24
Bituminous macadam	--	--	37

PLATE XLI. Finishing concrete pavement in Sonoma County.

PLATE XLII. Constructing weakened plane center joint in concrete pavement.

An improved and more sensitive instrument known as the roughometer has been furnished the department by the Bureau of Public Roads. Tests with this instrument indicate a variation in roughness in roads tested during the day and at night.

Crack Survey. Each year at the time the vialog survey of paving is made, a crack survey is also made on concrete pavements.

On the opposite page is a tabulation of results of vialog and crack surveys on a number of highways for the years 1924 and 1925.

Core Drill. The core drill is kept in service taking check samples from pavements from time to time to insure the accuracy of field-cast concrete specimens.

Patented Pavements. During the early part of 1926, the commission constructed four miles of Willite asphalt concrete surface on old concrete from Lerdo Canal north of Bakersfield northerly. Adjoining this surfacing and constructed at the same time by the same contractor is a four-mile section of asphaltic concrete of the state highway standard of 1925.

Incidental to the construction, an opportunity was afforded to compare the behavior of the two types of paving under traffic.

In the view of the department there are, no doubt, a number of excellent types of patented pavements, but the price control feature which so far has been inseparably connected with all patented pavements usually overbalances any merit which they may have when applied to state work.

The state is amply able to employ the high grade talent necessary to secure pavements of standard types fully up to any patented pavement in quality and service.

Guard Rail. The older type of guard rail consisting of a 4-inch by 4-inch post and two light rails, has been abandoned in favor of the present construction requiring 8-inch by 8-inch posts to which is bolted one 6-inch by 6-inch stringer. This stringer, in locations where sharp curves are encountered, is usually laminated, and the best results in general have been obtained in all cases where laminated stringers are used.

There has been some use of wire mesh guard fence, particularly in locations where impact of vehicle is liable to be head on. This type of guard fence has the defect that when it is once stretched, it is difficult to make a repair; also, it has a tendency to hammock when struck by a heavy blow and usually breaks off the post which may cause a serious accident. However, its value has been demonstrated in many cases.

So far as reported, the laminated guard rail has never been broken and has a springiness which makes it very desirable for this type of rail.

TABLE SHOWING PAVEMENT CONDITION AS INDICATED BY YEARLY INVESTIGATIONS.

Con- tract No.	Route	Length in miles (speed- ometer)	Type	Contractor	Resident engineer	Average interval of joints and cracks (feet)		Vialing index of roughness (inches per mile)

Note.—All above pavements were constructed in 1924.

*1924 record represents westerly 3 miles only. Same section taken in 1925 gave 31.5 inches per mile.

**Vialing record taken too early after construction, pavement not thoroughly cleaned.

Cost Data. The former system of keeping a great mass of inaccurate cost data on each job has been superseded by a system of periodic studies of particular jobs.

Various types of construction are selected and a close study of the costs made which will be of benefit for estimating purposes.

Investigations. Among the studies and investigations carried on by the department may be listed the following:

- Speed of Traffic on Curves and Grades.
- Position of Traffic on Tangents and Curves.
- Shrinkage of Earthwork.
- Economic Studies of Pavement Types.

Highway Economics. Each study of proposed road improvements emphasizes more clearly the vital necessity of accurate and comprehensive traffic studies and properly segregated maintenance costs.

Pavements need to be widened because of the number of vehicles using them, but need to be thickened because of the weight of tonnage to be carried.

Thus it can be demonstrated that a pavement twenty feet wide will readily carry six thousand vehicles per day of mixed types including, say, twelve per cent of heavy trucks. The percentage of trucks might be increased very materially so long as the total number of vehicles is not increased without requiring a wider pavement, but it would certainly require a thicker pavement to carry the traffic of any great increase in percentage of trucks.

For the past two years, the Construction Department has made intermittent studies of the *investments necessary for the transportation of one ton one mile on highways of varying designs.*

Typical results of such analysis as applied to reconstruction are shown in the summary on the opposite page.

General Researches and Publication of Reports. A number of general research investigations have been made and it is the policy to publish results and progress in "California Highways," the official publication of the California Highway Commission. Following is a list of researches and other articles reported in the "California Highways" and their date of publication:

NOTE.—Above jobs are selected as being nearly parallel in conditions and traffic. Percentages are derived by comparing separately the two types in the northern and southern counties. The Portland cement concrete type is assumed as 100 per cent.

APPRECIATION.

This report should not be closed without acknowledgment of the efficient and loyal service and outstanding ability of the engineers associated in the work of the department.

Mr. C. L. McKesson, Materials and Research Engineer, has added much to the prestige of the department and the Commission through his energetic and intelligent handling of the problems assigned to him.

Mr. E. Whitelycombe as Assistant Construction Engineer has not only handled a position requiring great tact and discretion in a diplomatic manner, but has very materially increased the efficiency of many operations in the field with a consequent large saving to the state in many instances.

Much laborious office and laboratory routine have been handled by Mr. H. A. Waterman and Mr. F. T. Maddocks in an efficient and progressive manner.

PLATE XLIII. Crossing over Southern Pacific Railroad near Hinton, Truckee River Highway, in Nevada County.

APPENDIX F

BRIDGE DEPARTMENT

By HARLAN D. MILLER, * Bridge Engineer

The construction of bridges by the California Highway Commission has developed in a marked degree during the past biennium.

The requirements that the counties furnish the funds for necessary bridges on state highways resulted in the bridge work lagging far behind the road construction, and as a consequence the Highway Commission in the last few years has proceeded with the construction of a great number of bridges without county aid. This has resulted in the construction by the Commission of a much larger number of bridges in the past two years than in any preceding biennium. Since June, 1924, sixty-five bridges and major structures have been designed by the Bridge Department and constructed under its supervision. The aggregate cost of this work was \$2,000,000. Twenty steel bridges have been repaired and painted at a cost of \$146,000. Contracts have been let and work is now under way on twenty-five bridges costing \$1,150,000. The total value of work completed and under construction is, therefore, about \$3,300,000. In addition, bids have been asked for on four structures costing \$350,000. Most of this last amount is covered by the cost of the South San Francisco Subway, the total cost of which is estimated at \$290,000. This structure is one of the most important on the state highway system as its completion is a big factor in the opening of the Bayshore Highway from San Francisco to Burlingame. In addition, the Department designed the Donner Summit arch bridge in Nevada County, which was built by the United States Bureau of Public Roads, and has prepared plans for many culverts and minor structures which were built by the divisions.

At the beginning of 1924 the State Highway Engineer placed the construction as well as the design of the bridges and railroad grade separation structures under the complete charge of the Bridge Department. The advantage of this move can be readily seen and the results speak for themselves. When the structures were being designed and built by the counties and when state work was supervised by the various divisions throughout the state, there was little opportunity for deep study of design and construction considered together. It is true that the Bridge Department formerly checked county designs, but the work was limited to passing upon the adequacy of strength and capacity. In most cases, the type of the structure was decided by the counties or private engineers and there appeared about as many different kinds of structures on the California highways as there are counties within the state.

*Died October 19, 1926.

The Bridge Department in its work endeavors to reflect the general high standard and ideals of the California Highway Commission and the State Highway Engineer. With the assistance of the State Testing Laboratory, the best materials are obtained for the structures. Experienced resident engineers, with the cooperation of the contractors, obtain well fabricated work.

With the bridge construction all under one head, however, it is evident that there will be more uniform work throughout the state, and the department aims to make its standard at least equal to the best work previously done under any of the divisions. The design section of the Bridge Department is benefited to a great degree by being in closer touch with the construction work.

Department Organization. The present organization of the Bridge Department consists of the Bridge Engineer, Assistant Bridge Engineer, engineer in charge of railroad crossings, four traveling engineers in general charge of construction, a corps of twenty-eight resident engineers and assistants in direct charge of construction contracts, and a force of seventeen designers and draftsmen, one clerk, two stenographers and an office assistant.

During the biennium, a branch office of the department was established in Los Angeles to expedite the handling of work in the southern part of the state.

The Manual of Instructions. One of the accomplishments of the Bridge Department during the past biennium was the publication of a "Manual of Instructions." Pursuant to the request from the State Highway Engineer to the several department heads at Sacramento to compile a manual of instructions relative to the work of their respective departments, the Bridge Engineer published a set of instructions in book form for use in carrying out the field work of the department. The manual is handy to carry, has 180 pages and contains thirty-eight illustrations. The Bridge Department has had requests for copies of the manual from all parts of the United States and from foreign countries.

The value of the Bridge Department Manual lies in the fact that any construction engineer upon assignment to a job can rely upon it as a ready reference and guide in carrying out any part of his work from the staking out of the structure to be built to the cleaning up of detours and right of way when the work is completed.

WORK OF THE DEPARTMENT

Design. Some of the more outstanding developments in bridge design during the past two years have been:

- 1—Wider roadways.
- 2—Better alignment of bridge and approaches.
- 3—More attention to esthetics of design.

Previous to 1924 the standard width of roadway for state highway bridges, with few exceptions, was twenty-one feet. Now, on roads where a twenty-foot pavement is contemplated or seen as a future possibility, the bridges are made twenty-four feet. Where the traffic justifies wider roads the bridges are made correspondingly wider. A

number of thirty-foot bridges and subways have been built in the past two years and a few forty-foot and forty-six-foot structures. A large number of culverts and minor structures have had to be extended and widened where wider roads were being built, and in southern California two existing large bridges are being doubled in width because their narrow roadways acted as a bottle neck to retard the heavy traffic. Wherever it seems advisable, bridges are now being built with sidewalks on one or both sides.

At one time it was the rule in highway bridge construction that wherever possible bridges should be built at right angles to the stream and without vertical or horizontal curves on the bridge. This practice made for lowest cost of bridge proper and simplicity of design but often resulted in dangerous sharp turns at bridge approaches and poor alignment generally. As a consequence many of the earlier constructed bridges which are otherwise adequate are posted with warning signs cautioning traffic to go slowly.

It is now the aim of the Bridge Department to make the alignment and riding qualities of bridges and approaches equal to the high standard used in the construction of the highways, so that they can be safely traveled at the maximum speed limit. In conjunction with the Department of Surveys and Plans, a study is made of the crossing and its approaches and where necessary the bridge is skewed or curved to get the desired result in the most economical manner. This makes for more complicated designs, but the final result justifies the additional labor.

In the past three years much attention has been given to securing artistic and fine looking bridges. The details of railing and end posts have had a great deal of study. Where the size of the structure made it more or less monumental in character the general lines and details as seen in elevation have received much study. Some notable examples are the two arch bridges over Charley Creek and Doney Creek in Shasta County, and Dog Creek arch, which has been designed but is not yet under construction.

Many bridges built only a few years ago were designed for much lighter loads than are now using the highways and as a consequence are now in need of replacement because they are not adequate to carry the heavy present day traffic. This shows very clearly the menace to the state bridges if the weights of trucks using the highways are allowed to increase indefinitely. It means that structures which should have a service life of fifty to one hundred years must be replaced every fifteen or twenty years. State highway bridges are now being designed to carry a fifteen-ton, four-wheel truck on each traffic lane, with suitable equivalent uniform loads, in the case of long span bridges, to care for long lines of traffic. This design adequately takes care of the six-wheel seventeen-ton trucks now permitted on the highways.

For the protection of our bridges, it is therefore essential that the maximum loads allowed to use our highways should never be permitted to exceed these design loadings.

Grade Crossing Eliminations. Due to the rapid increase in the number of motor vehicles operating on state highways, the elimination of railroad grade crossings is becoming a very important part of the work of the Bridge Department.

PLATE XLIV. Bridge across Salt Creek Overflow on State Highway in Tehama County.

PLATE XLV. Bridge over Salt Creek on State Highway in Shasta County.

The Department of Vital Statistics of the State Board of Health states that in 1924 there were 1364 fatal automobile accidents in California, of these 102 occurred at railroad crossings, while in 1925 there were 1484 deaths from all accidents, 118 being at railroad crossings. These figures show an increase for the total accidents of about 9 per cent while the increase at grade crossings is about 16 per cent. These figures indicate the necessity of separation of all grade crossings.

Because of there being several interested parties to all projects involving separation of grades, considerable negotiation must be carried on before definite agreements can be reached. Efforts are being made to simplify this work so that it will be reduced to a minimum.

During the past biennium ten grade separations have been constructed at an aggregate cost of \$530,000, five are under construction, while plans and negotiations are now under way for twenty more to be constructed in the near future. The estimated probable cost of eliminating all the grade crossings on the state highway system is \$20,000,000 of which the state will have to pay at least 50 per cent or an amount in excess of \$10,000,000.

Following are descriptions of some of the structures built under the supervision of the Bridge Department during the past two years.

GARRITY CREEK BRIDGE

A bridge consisting of one 30-foot reinforced concrete girder span over Garrity Creek about one mile west of Pinole in Contra Costa County, on the Oakland-Martinez highway (IV-C.C-14-A) was constructed at a cost of \$5,800 under Contract M-47, awarded to John Phillips. This bridge has a clear width of roadway of 28 feet and is a big factor in handling the traffic from San Francisco to northern California.

SIX TEHAMA COUNTY BRIDGES

Six reinforced concrete girder bridges across Mill Race, Salt Creek, Craig Creek, Salt Creek Overflow, Butler Slough and New Creek, consisting of four 30-foot spans, four 26-foot spans, four 30-foot spans, five 30-foot spans, five 30-foot spans, and three 30-foot spans respectively in Tehama County near Red Bluff on the Red Bluff-Chico highway (II-Teh-3-D) were constructed at a cost of \$50,000 under Contract No. 434 awarded to McKenzie and Pollard, and were completed October 15, 1924. These bridges replace a number of old steel truss bridges.

SALT CREEK BRIDGE

Salt Creek Bridge, a reinforced concrete structure which replaces an old concrete bridge north of Redding, was constructed under contract M-63 by Nate Lovelace at a cost of \$19,200. This bridge is constructed on a six per cent grade and consists of five spans of the 3-girder type, the east end span being forty-two feet, the center span forty-two feet and the west end span thirty-six feet long. The two intermediate spans are twenty feet long. The structure is supported on reinforced concrete frame bents with spread footings. The new bridge has a roadway width of twenty-four feet and was the first structure completed on the new alignment in the Sacramento Canyon.

PLATE XLVI. Van Duzen River Bridge on State Highway in Humboldt County.

PLATE XLVII. San Juan Creek Bridge on State Highway in Orange County.

VAN DUZEN RIVER BRIDGE

A reinforced concrete arch bridge consisting of three 163-foot open spandrel arch spans and ten 30-foot girder spans was constructed across the Van Duzen River in Humboldt County on road I-Hum-1-F. The arches are barrel type and are 15 feet wide, 2 feet thick at the crown and 3 feet 3 inches thick at the spring. The total length of the structure is 787 feet 8 inches with a 21-foot roadway. The piers and north abutment of the arch span are founded on wooden piles. The north approach spans are supported by reinforced concrete piles.

This bridge was constructed during an extremely wet winter, the river rising to flood stage several times and washing out the detour. A detour trestle was constructed under Day Labor Contract D-604 by the Mercer-Fraser Company of Eureka. This bridge was also partly destroyed at two different times by flood. While the detours were out of use, the bridge of the Northwestern Pacific Railroad was flooded and was used for highway traffic while the highway detour was being constructed and repaired.

The California Highway Commission and the people of the state greatly appreciated the ready cooperation of the Northwestern Pacific Railroad Company during the work.

Bordwell and Zimmerman of Napa, California, were the contractors for the bridge construction under Contract No. 440. The total cost of the bridge including the detour was \$125,000.

SAN JUAN CREEK BRIDGE

The San Juan Creek bridge, one-half mile south of San Juan Capistrano on the San Diego highway (VII-Ora-2-A) is 180 feet long, has a 30-foot roadway and consists of three 46-foot and two 21-foot reinforced concrete spans on concrete piers and pile end bents. It was constructed by Stevens Brothers and Haas under contract M-70, at a cost of \$33,630.

THREE BRIDGES IN LASSEN COUNTY—ROUTE 29

Three bridges were constructed by Lord and Bishop at a cost of \$22,000 under Contract No. 450 on the Red Bluff-Nevada state line highway. One structure was built across Robbers Creek at Westwood which consisted of one 37-foot two-girder span on reinforced concrete abutments; another bridge across Baxter Creek near Susanville which consisted of three 30-foot timber spans on reinforced concrete frame bents; a similar structure was built across Long Valley Creek near Doyle which consisted of five spans. The footings of the combination concrete and timber structures are each supported by three Douglas fir piles, making six piles per bent.

The bridges across Baxter Creek and Long Valley Creek are of the semi-permanent type. The reinforced concrete frame bents are so constructed that the timber deck can be removed when no longer serviceable and a permanent concrete deck placed on the caps. An asphalt wearing surface was specified for the floor of the timber bridges. Owing to the remote locality and the difficulty in getting equipment for the hot asphalt mix, the mixture known as "Laykold" was substituted. The Laykold is an emulsified asphalt and can be mixed in an ordinary concrete mixer which is used for Portland cement concrete. The propor-

PLATE XLVIII. Bridge on State Highway west of Bieber in Lassen County.

PLATE XLIX. Cottonwood Creek Bridge on State Highway in Kern County.

tions of the mineral aggregate were maintained the same as for a hot mix.

SEVEN BRIDGES IN LASSEN COUNTY—ROUTE 28

There were seven of the semi-permanent type concrete and timber bridges built in the vicinity of the town of Bieber on road II-Las-28-A, the Redding-Alturas highway. These bridges are of the same type as those constructed across Baxter and Long Valley creeks on route 29. They were constructed across the Pit River and six of its overflow channels. The footings of the concrete frame bents were spread and rested directly upon the foundation soil. Under the original contract it was proposed to take care of part of the overflow water by constructing a wier; but it was later decided to lengthen the bridges near the location of the wier.

The bridges consisted of one 390-foot structure, two 210-foot, one 180-foot, one 120-foot, and two 60-foot structures, the total length of the bridges being 1230 feet, all spans being thirty feet long. The work was done by contractors Hart, Horn and Savage at a cost of \$62,600, under contract No. 452.

COTTONWOOD CREEK BRIDGE

A bridge of four 50-foot and five 22-foot two-girder reinforced concrete spans was constructed across Cottonwood Creek on the Kern River Canyon road eleven miles east of Bakersfield, (VI-Ker-57-E), at a cost of \$37,350 under contract No. 453 awarded to J. L. Webster. The deck of this bridge is supported on three towers and four concrete frame bents. The floor of the bridge is about 45 feet above the creek bottom and has a roadway width of twenty-one feet. This bridge is part of the improvement of the highway lateral from Santa Maria in San Luis Obispo County to Freeman in Kern County.

CHEROKEE CANAL BRIDGE

A 150-foot reinforced concrete bridge was built across the Cherokee Canal By-Pass in Butte County on road III-But-3-B. The bridge is a four girder type, 21-foot roadway, 30-foot spans on frame bents of reinforced concrete, and was constructed by R. B. McKenzie at a cost of \$15,000 under contract No. 454.

SIMMONS CREEK BRIDGE

A 76-foot, four-girder reinforced concrete bridge, with frame bents, was constructed across Simmons Creek, fourteen miles east of Paso Robles, on the Paso Robles to Bakersfield lateral, road V-S.L.O-33-B, by C. C. Gildersleeve, at a cost of \$6,750, under contract No. 459. The bridge has one 34-foot span and two 21-foot spans with a 21-foot roadway.

BRIDGES ACROSS VILLA CREEK AND THE SOUTHERN PACIFIC RAILROAD NEAR PISMO

One of the important links in the improvement of the Coast Highway between San Diego and San Francisco was the Pismo improvement work. In connection with this improvement was the construction of two bridges, one across Villa Creek and the other across the Southern Pacific Railroad south of the town of Pismo, road V-S.L.O-2-E.

The Villa Creek structure is a reinforced concrete bridge, consisting of six 30-foot girder spans with a 24-foot roadway, supported on reinforced concrete pile bents.

The structure across the Southern Pacific Railroad consists of nine reinforced concrete spans of the four-girder type, having a 24-foot roadway constructed on reinforced concrete frame bents. The footings of the frame bents are founded on reinforced concrete piles. The span across the railroad track and the one on each side are thirty-five feet long, the other six spans are thirty feet long. Both structures were built by J. L. Webster, at a cost of \$52,600, under contract No. 473.

BRIDGES ON TRUCKEE RIVER ROUTE

Five bridges were completed on this route during the last biennium.

The first of this series was the bridge over the Truckee river and the Southern Pacific Railroad at Polaris (III-Nev-38-A). The structure at Polaris is built of reinforced concrete and consists of one 160-foot open spandrel arch span, four 30-foot, one 38-foot, and one 59-foot girder spans, with a 21-foot roadway. The short girder spans are of the four-girder type, supported on concrete-frame bents. The 59-foot span has two girders and spans the main line of the Southern Pacific Railroad from Sacramento to Ogden. This bridge was constructed by Proctor and Cleghorn at a cost of \$55,000, under contract No. 446.

A reinforced concrete arch bridge across the Truckee River near Boca, consisting of one 144-foot open spandrel arch span and two 44-foot, two-girder approach spans, with a 21-foot roadway, was constructed by Rocca and Caletti, at a cost of \$32,000, under contract No. 471. The design of this bridge is well suited to its surroundings and adds to the beauty of the new highway.

A reinforced concrete bridge was constructed across the Truckee River at Prosser Creek, consisting of two 60-foot and two 34-foot, two-girder spans supported on three reinforced concrete piers and a reinforced concrete frame bent at each approach. The bridge was constructed by T. H. & M. C. Polk, at a cost of \$18,000, under contract No. 470.

The bridge across the Truckee River at Hinton consists of three 60-foot spans and two 34-foot, two-girder, reinforced concrete spans, with a 21-foot roadway. This contract was begun by the McKay Engineering Company and completed by Carl F. Heinze, under contract No. 468, at a cost of \$32,000.

The bridge across the Southern Pacific Railroad near Hinton, consists of a 57-foot span over the railroad tracks, with a south approach of two 24-foot spans and a north approach of one 30-foot and two 24-foot approach spans. The entire structure is reinforced concrete and has a 21-foot roadway. This contract was awarded to T. H. & M. C. Polk and the bridge built at a cost of \$19,200.

PLATE L. Overhead crossing at Pismo, on State Highway in San Luis Obispo County.

PLATE LI. Bridge over Truckee River near Prosser Creek on State Highway in Nevada County.

CHOWCHILLA RIVER BRIDGE

A reinforced concrete bridge, consisting of five 25-foot, four-girder spans on reinforced concrete pile bents was constructed across the Chowchilla River, three and one-half miles north of Chowchilla, replacing an old wooden structure, on the Valley Route from Sacramento to Los Angeles (VI-Mad-4-C), under contract No. 462. This bridge has a 24-foot roadway and is quite an improvement in handling the traffic along this highway. Proctor and Cleghorn were the contractors. The cost of the bridge was \$15,000.

SAN GORGONIO WASH BRIDGE

A reinforced concrete bridge 350 feet long, consisting of five 30-foot four-girder spans, with a roadway 21 feet wide, on concrete frame bents, was constructed across San Gorgonio Wash in Riverside County, two miles east of Banning on the San Bernardino-El Centro highway, road VIII-Riv-26-C.

The building of this structure closed one of the gaps in the new highway, a detour having been used around this site for several years. The bridge was built at a cost of \$17,600 under contract No. 464, awarded to DeWitt and Morine.

SAN ONOFRE CREEK BRIDGE

A 300-foot reinforced concrete bridge, consisting of six 50-foot spans, was constructed across San Onofre Creek in San Diego County on the San Diego-Los Angeles highway, road VII-S.D-2-D, under contract No. 466, by the Fluor Construction Company at a cost of \$58,250. This bridge has a 30-foot roadway and is supported by seven hollow-type, reinforced concrete piers, with semi-circular ends. A new design of railing was used on this bridge, which adds to its attractiveness. The footings of all piers, with the exception of the south end pier, are supported by Douglas fir piles driven to refusal. The south end pier is founded on cemented gravel.

The San Onofre Creek Bridge is constructed on the relocated line on route 2 in San Diego County. The 30-foot roadway amply provides for the traffic on this highway and is a great improvement over the old steel bridge which was used on the old location.

SAN MATEO CREEK BRIDGE

The San Mateo Creek Bridge, on road VII-S.D-2-D, is similar to the San Onofre Creek Bridge but is 100 feet longer, consisting of eight 50-foot, three-girder, reinforced concrete spans with a roadway width of thirty feet, constructed on hollow-type piers. Like the San Onofre Creek Bridge, the San Mateo Creek Bridge is constructed on new location which eliminated dangerous curves and replaced an old wooden county bridge with 15-foot roadway. The new bridge is still on a 2.74 per cent grade. The south abutment and all except the two north piers are founded on Douglas fir piles. The two north piers are founded on sandstone.

The bridge was built by R. A. Wattson at a cost of \$76,000, under contract No. 467.

COACHELLA STORMWATER DRAIN BRIDGE

The Coachella Stormwater Drain Bridge, road VIII-Riv-26-E, replaces two small wooden bridges and some roadway pavement between levees of the drain. During the construction of the bridge it was necessary to build a two-way plank road detour across the sandy bottom of the drain. The new bridge is 480 feet long with a 21-foot roadway and consists of sixteen 30-foot, four-girder, reinforced concrete spans on reinforced concrete pile bents. Badt-Falk and Bergendahl constructed this bridge at a cost of \$40,250, under contract No. 477. This bridge is another link in the construction of the San Bernardino-El Centro highway.

SACRAMENTO NORTHERN UNDERPASS—WEST SACRAMENTO

The construction of the Sacramento Northern Railroad Underpass, X-Yol-6-C, is part of the improvement of the western entrance to the city of Sacramento. This structure consists of a 35-foot skew span with reinforced concrete abutments and wing walls. The deck consists of 18-inch 92-pound Bethlehem steel girder spans spaced at two and one-half foot centers covered with a concrete slab supporting the tracks. The clear width of roadway is thirty feet, which provides for a 5-foot sidewalk. This bridge was constructed by Lord and Bishop at a cost of \$23,000, under contract No. 480.

NORTH SACRAMENTO UNDERPASSES

Crossings under the Sacramento Northern and Western Pacific Railroads were constructed on the north entrance to Sacramento on road III-Sac-3-B. The structures were built under contracts which were both awarded to Lord and Bishop.

The Western Pacific Railroad span is a 62-foot, through steel girder ballast deck skewed span. The Sacramento Northern Railroad span is a 61-foot skewed through steel girder open deck span. The Western Pacific span rests on triangular shaped, earth filled, reinforced concrete abutments. The span of the Sacramento Northern rests on rectangular reinforced concrete piers. Both underpasses have a clear roadway of thirty feet. About 1200 feet of reinforced concrete pavement was placed in connection with the building of the underpasses.

These underpasses replace a narrow wooden structure which had been in use for many years and was wholly inadequate to handle the traffic at the north entrance to the city. The total cost of these structures was \$63,000.

SAN LORENZO CREEK BRIDGE

A reinforced concrete bridge 240 feet long consisting of three 60-foot 2-girder spans and two 30-foot 4-girder approach spans over San Lorenzo Creek in Monterey County near King City on the San Francisco-Los Angeles highway (V-Mon-2-F) was constructed at a cost of \$32,500 under Contract No. 436, awarded to Rocca and Caletti. This bridge was constructed on a new alignment eliminating sharp curves at the approaches to the old county bridge.

SAN GABRIEL RIVER BRIDGE

A reinforced concrete bridge, 432 feet long, having a roadway width of forty feet and a 5-foot sidewalk on each side, was constructed across the San Gabriel River on the Whittier Boulevard, VII-L.A-2-D. The bridge has eight 54-foot spans resting on nine hollow-type reinforced concrete piers. The bridge was first designed without piles, but upon opening the excavation, it was found necessary to drive forty-eight Douglas fir piles under each pier. The roadway slab is supported on four girders. The new structure replaces an old narrow steel bridge, which has congested traffic at this point for some time. Charles and F. W. Steffgen were the contractors. The bridge was built under contract M-73, contains 2890 cubic yards of concrete and cost \$98,000.

VENTURA RIVER BRIDGE EXTENSION

The state highway crosses the Ventura River at the city of Ventura on an 8-span reinforced concrete arch bridge which was built in 1912. The spans are three-hinge "Thomas" arches, each 120 feet long. The roadway approach at the north end of the bridge was washed out by flood and replaced by a timber trestle. The timber approach was replaced in 1925 by a reinforced concrete structure. The new approach consists of three 60-foot two-girder spans and one 30-foot two-girder spans supported on concrete piers and bents. It is 210 feet long and has a 21-foot roadway. The work was done by Otto Parlier at a cost of \$30,250, under contract M-79.

BOULDER CREEK STRUCTURES

Two culverts and a reinforced concrete bridge were constructed along Boulder Creek in Santa Cruz County on road IV-S.Cr-44-A by A. J. and W. S. Wilson, at a cost of \$15,600, under contract M-91. A reinforced concrete culvert six feet by five feet by 103 feet was constructed at Fall Creek. A five foot by five foot by 43-foot reinforced concrete culvert was constructed at Cleveland Dam Creek. The culvert of Fall Creek has reinforced wing walls at both the upstream and downstream ends; the culvert at Cleveland Dam Creek has reinforced wing walls on the upstream end and a concrete gravity retaining wall seventy-one feet long varying from six feet to twenty-five feet in height at the downstream end. A curb and handrail was constructed along the top of the retaining wall.

CHARLEY CREEK BRIDGE

The second bridge to be built during the biennium on the new alignment in the Sacramento Canyon, north of Redding, was the bridge across Charley Creek on road II-Sha-3-C. This structure was the first in a series of high reinforced concrete arch bridges being built across the deep gorges along the highway in this locality. The bridge has four 29-foot approach spans on each side of the arch. The arch span is 147 feet and the deck over the arch is 120 feet above the stream. There are eleven 14-foot deck spans having a total length of 154 feet, supported by

the arch ribs. An 8-foot panelled pilaster is constructed above each arch abutment. Semi-circular fascia beams are constructed on the outside of the spandrel and approach spans and give a very pleasing effect in harmony with the high arch ribs. The bridge has a 24-foot roadway and is 400 feet long. Two observation platforms were constructed at each end of the bridge. The bridge was constructed by Bordwell and Zimmerman at a cost of \$68,500, under contract M-95.

SAN JUAN CREEK BRIDGE

A 60-foot bridge, consisting of one 30-foot and two 15-foot reinforced concrete spans on concrete bents over San Juan Creek, near San Juan Bautista, San Benito County, on the state highway lateral V-S.Bt-67-A, was constructed under contract M-55, by Rocca and Caletti, at a cost of \$6,000.

G. H. DOUGLAS MEMORIAL BRIDGE

The G. H. Douglas Memorial Bridge, on the Redwood Highway, road I-D.N-1-A, crosses the Klamath River about three miles from its mouth. It replaces an antiquated ferry which formerly provided the only means for traffic using this highway to cross the river. The ferry was often out of service and at times of extreme high water or extreme low water could not be operated at all. At such times Del Norte County was practically cut off from the remainder of California, as this county has no railroad communication with the rest of the state.

For years the late Dr. G. H. Douglas, Assemblyman from Del Norte County, had been trying to get an appropriation from the State Legislature to bridge this river. During the 1923 session, in the midst of his efforts to secure such an appropriation, Dr. Douglas died. In recognition of his long efforts for this worthy object, his colleagues voted \$225,000 for a memorial bridge over the Klamath River to be known as the G. H. Douglas Bridge. The California Highway Commission allotted sufficient funds to provide for financing the project, and its construction was undertaken by the Commission.

The bridge is 1147 feet long, consists of five 210-foot open spandrel arch spans and two approach spans. The concrete arch type was chosen as being more suitable for a memorial structure than a steel truss bridge. The stream in time of flood is very swift and carries exceedingly heavy drift, which often includes redwood trees twenty feet in diameter. The bottom is sandy, requiring piles under all piers. For these reasons many engineers objected to this type of structure and prophesied settlement of foundations. As the construction period extended over two flood seasons many difficulties were encountered, but the structure has finally been completed practically as designed. When the falsework was removed from under the arch ribs and later when the heavy concrete deck was added, accurate measurements were taken, but no trace of any settlement was found. F. Rolandi constructed the bridge under contract No. 443. The total cost will be about \$425,000.

PLATE LII. Rincon Seawall along State Highway in Ventura County.

PLATE LIII. Typical stairway at Rincon Seawall.

WILLOW BROOK BRIDGE

The bridge across Willow Brook on road IV-Son-1-C consists of two 40-foot reinforced concrete five-girder spans and one 34-foot five-girder span on reinforced concrete pile bents. The bridge has a 30-foot roadway with standard balustrade type handrail. The new bridge replaced an old structure consisting of two 45-foot reinforced concrete spans resting on one pier and two reinforced concrete abutments. The old structure was built by the county in 1921 and was wrecked by flood early in 1925. The center pier was undermined and the bridge settled into the stream. The new structure was built by Lozier & Carr at a cost of \$19,200 under contract M-102.

THE RINCON SEAWALL

A seawall has been constructed between Rancho El Rincon and Sea Cliff in Ventura County on the San Diego-San Francisco highway. The wall was built in two sections, one section being 4600 feet long and the other 2000 feet long. Stairways are being constructed at each end of the long wall and at the north end of the short wall to provide access to the beach.

The wall varies from 16.5 to 21 feet in total height and averages about 19 feet, contains about 15,750 cubic yards of concrete, averaging 2.4 cubic yards per lineal foot of wall. The work is being done by the J. H. Tillman Company and includes the construction of thirty reinforced concrete box culverts 50 to 60 feet long and placing 59,000 cubic yards of roadway embankment back of the wall.

The seawall and roadway embankment replace an old narrow timber causeway. The roadway embankment is 40 feet wide. The total cost of the work, including stairways, is \$411,000.

The stairways are being constructed under contract DM-149 by R. A. Travers at a cost of \$11,000.

WILLOWS CULVERTS

Two large culverts were constructed near the town of Willows, Glenn County, by Otto Parlier under contract M-59 at a cost of \$19,500. One structure consisted of six 8-foot by 7-foot openings 40 feet long. This structure, which has a roadway of 30 feet and a 5-foot sidewalk on each side, was constructed on route 7 immediately south of the town on the Benicia to Red Bluff highway. The other structure was constructed on route 45 on the eastern side of the town on the Willows to Glenn highway. Both structures were provided with reinforced concrete aprons to prevent scour at the headwalls.

TWELVE STOCKTON ROAD BRIDGES

Twelve reinforced concrete slab bridges having a total length of 526 feet near Sacramento on the Upper Stockton road (X-Sac-4-B) were constructed and two small bridges were widened under Contract M-43 awarded to T. H. and M. C. Polk. The total cost of this contract was \$50,500. These bridges replace old timber structures and have widths of roadway of 24 feet and 30 feet. They greatly facilitate the handling of heavy valley traffic over this route.

PLATE LIV. Slate Gulch Bridge on State Highway in Mariposa County.

PLATE LV. Merced River Bridge at El Portal, in Mariposa County.

BRIDGES ON THE NEW ALL-YEAR HIGHWAY FROM MERCED TO THE YOSEMITE VALLEY

The first of a series of bridges to be built on the new all-year highway (VI-Mpa-18-E-F-G), was the bridge across the Merced River at El Portal (VI-Mpa-18-G). This is a reinforced concrete structure consisting of three 58-foot three-girder spans, with a 24-foot roadway supported on reinforced concrete piers and abutments. The bridge was constructed by Otto Parlier at a cost of \$34,500 under contract No. 486.

The following bridges are under construction on this road:

A 48-foot filled spandrel reinforced concrete arch, with natural stone facing, across Slate Gulch, and a 39-foot arch span across Sweet-water Creek, of similar construction, are being built by Noble Brothers under contract No. 495.

A bridge across Bear Creek, consisting of three 55-foot reinforced concrete girder spans with concrete abutments, is being built by Smith Brothers under contract No. 494. It is on a 500-foot radius curve with a 2-foot superelevation.

A bridge across South Fork of Merced River, consisting of three 50-foot reinforced concrete girder spans with concrete abutments, is being built on a 700-foot radius curve. This structure is being built by Division VI under day labor contract D-619, with Bridge Department inspection.

All of the above bridges have a 24-foot roadway.

NORTH FORK PACHECO CREEK BRIDGE

A bridge consisting of three 50-foot and two 34-foot reinforced concrete girder spans on concrete bents, over North Fork Pacheco Creek, about 21 miles east of Gilroy in Santa Clara County on the Gilroy-Califa highway, (IV-S.Cl-32-B) was constructed at a cost of \$27,500 under Contract No. 437 awarded to John Simpson and Company. This structure is built on a 175-foot radius curve, the roadway is 24 feet wide, superelevated, and is 50 feet high over the creek bed.

CEDAR CREEK BRIDGE

A bridge consisting of three 42-foot reinforced concrete girder spans over Cedar Creek, about 18 miles east of Gilroy in Santa Clara County on the Gilroy-Califa highway (IV-S.Cl-32-B), was constructed at a cost of \$17,500 under Contract No. 437 awarded to John Simpson and Company, and completed in September, 1924.

PLATE LVI. Maintenance Station at Santa Maria, Division V.

PLATE LVII. Maintenance Station at Rodeo, Division IV.

APPENDIX G

MAINTENANCE DEPARTMENT

By T. H. DENNIS, Acting Maintenance Engineer

To the Maintenance Department is assigned the general supervision of highway maintenance, roadside trees, permits and traffic census.

The object of this supervision is the standardization of maintenance practice throughout the state, in so far as economical, of labor, equipment, and materials.

ORGANIZATION

The headquarters organization, in addition to the Maintenance Engineer, includes two field assistants, one office assistant, draftsman, arboriculturist, two clerks, and one stenographer.

The direction of the field work rests with the division engineers, of which there are ten in the state, most of whom have an assistant detailed to maintenance.

These assistants may or may not have under them, in active direction of field work, one or more maintenance superintendents. Under these assistants or superintendents are foremen or patrolmen, to each of whom is assigned a territory of from twenty to forty miles, depending on the condition and type of roads.

Under a legislative act approved May 19, 1925, the Highway Commission was instructed to maintain all traversable county roads which were, at the time, part of the highway system.

The flexibility of the organization was such that with the addition of a few foremen and laborers, and extension of the territory of others, some 1200 additional miles of road were put under maintenance in January of this year.

A great deal of work, such as widening, surfacing, and draining, has been necessary in conditioning these roads for maintenance.

Judging from the commendatory letters received, the good results obtained in this short period have exceeded all expectations. Local communities have already experienced considerable benefit due to the better condition of these roads.

EQUIPMENT

The patrolmen's equipment, in general, consists of a light one-ton truck for transportation of labor and material; heating kettle, or small mixer for repairs to bituminous and concrete pavements; and blade graders, either powered or drawn, for maintenance of earth and graveled roads. Extensive repairs are usually handled by special crews, suitably equipped.

The past two years have seen the quite general use of light, rubber-tired tractors, equipped with blade grader, broom, mower, and hoist attachments. Their use under certain conditions has proven both economical and efficient. On tractors operating over wet clays or shifting sands, full or semi-crawler type track attachments are substituted for the rubber-tired wheels.

PLATE LVIII. Tree watering unit, consisting of 1000-gallon tank mounted on trailer drawn by tractor.

PLATE LIX. Trestle constructed by maintenance forces to carry traffic across the Klamath River near Orleans after old bridge was destroyed by fire.

Light pneumatic-tired 1-ton and 1½-ton trucks equipped with hydraulic or hand-dump hoists are, where conditions permit, gradually being substituted for the 3-ton, hard-tired, four- and two-wheel-drive trucks. Their use, however, is restricted to material hauls of short length and general patrol work.

Tar kettles, mixing equipment, blade graders and trailers, are for the sake of mobility, being equipped with roller bearings and rubber-tired wheels.

A light gasoline shovel with crawler traction has proven satisfactory in slide removal and minor grading operations.

All equipment used is rented to the various divisions by the Equipment Department, the rents being based on upkeep and replacement. Due to frequent improvement in equipment types, obsolescence is an important factor in determining rental rates. As the equipment rentals approximate 29 per cent of the total general maintenance expenditures, our endeavor is to suitably equip each job, to the end that a minimum number of pieces of equipment will receive a maximum of use. This department is constantly on the lookout for either improvements in type or applications of use, which will effect a reduction in maintenance costs.

ROADSIDE TREES

Systematic tree planting for road beautification began in 1920. By 1922, 100 miles had been planted, and to date there are under maintenance 550 miles of trees.

Generally the trees are spaced at 50-foot intervals, being placed alternately on the right and left sides of the roadway, with the necessary elimination for visibility at crossings and road intersections.

The care of these trees, which is very exacting, is usually assigned to the individual foreman in whose territory they occur. Assisting in the direction of this work is an arboriculturist, reporting to the central office. Early in 1924, Division III inaugurated the plan of assigning some 60 miles of trees to a traveling crew whose sole duty was tree work. The results to date have been very satisfactory, both as to cost of operation and condition of trees.

Special tree-watering equipment, with a movable discharge pipe, has been developed, which enables the watering to be performed from the driver's seat. This watering is necessary, usually every four to six weeks, during the period June to October. In addition to this work, various precautions are exercised in protecting the young trees from borers, grasshoppers, and scale.

The state itself makes no original plantings, but encourages planting by civic or other public bodies. Trees can usually be secured at a nominal price from the State Nursery, located near Davis. The planting and care of trees during the first year is handled by the interested parties, or the task is assigned to state forces by a payment of a specified sum per tree planted and maintained. After the first year's maintenance, the state assumes the burden of care and replacement in event of the loss of trees.

PLATE LX. Constructing asphaltic oil surface by the mixing method on State Highway in San Bernardino County.

PLATE LXI. Asphaltic oil surfacing, penetration method, on State Highway in Mendocino County.

FROM PALLIATIVE TO OIL TOP

One of the Maintenance Department's important problems is conservation of metal on the crushed gravel or stone-surfaced roads. The light mulch of small-sized crushed rock, placed to protect the base from ravel and corrugation, disappears as dust under the abrasive action of fast, heavy traffic.

Dust palliatives which have been used are hygroscopic salts and light fuel oils of 18-degree to 21-degree Baume gravity, containing 40 per cent to 45 per cent of 80-degree penetration asphalt. For effectiveness under conditions of humidity encountered, two applications of the salt, either in liquid or solid form, with occasional sprinklings of water, were necessary during the summer period of traffic. This treatment proved more expensive than the light oils applied cold with a power distributor, at the rate of $\frac{1}{6}$ -gallon to $\frac{1}{9}$ -gallon per square yard of surface treated. Two or three such applications, depending on volume of traffic, were necessary during the summer period. As neither palliative eliminated the necessity of intensive maintenance or loss of road metal, it was decided to seal the road with a heavier fuel oil, carrying 60 per cent to 70 per cent of 80-degree penetration asphalt. Two methods of treatment prevailed, penetration and mixing. Penetration has been used on tightly bound roads; mixing has been used on roads loosely bound due to a lack of suitable local binder, and where the additional oil necessary in this method was more economical than the importation of binder used in conjunction with the penetration method. A brief description of both methods follows:

Penetration Method. On crushed gravel or stone roads tightly bound, the surface rock was exposed with a power broom. Asphaltic oil heated to between 150 degrees and 200 degrees F. was applied with a pressure distributor at the rate of $\frac{1}{4}$ -gallon per square yard of surface treated, and allowed to penetrate. The period of penetration varied from six hours to twenty-four hours, depending on the tightness of the base. Penetrations secured varied from $\frac{1}{2}$ -inch to 1 inch. While the top was slightly sticky, a second application of $\frac{1}{4}$ -gallon per square yard was made, the free oil not taken up by the base being screened with clean rock or pea gravel, $\frac{3}{4}$ -inch to $\frac{1}{2}$ -inch in size. The amount used varied between fifty and seventy-five cubic yards per mile. The rock mulch swept from the base in brooming was salvaged free of dust, for this purpose, by using a scoop shovel whose blade had been replaced with a $\frac{1}{4}$ -inch mesh wire screen. When the screening material used is not clean, the oil is blotted up into a mat of brownish texture which soon deadens and displaces under traffic. When clean material is used, the oil retains its life, has a glossy black texture, and is resilient under traffic, the surface appearance being similar to oil macadam.

Proper preparation of the base, that is, elimination of all top dust, the exposure of the top rock to provide bond for the oil, together with the use of clean screening material, are all necessary to insure the success of this method.

Some 190 miles of road were so treated in 1926. Insufficient time has elapsed since its application to warrant proclaiming the success attained, but it may be stated that results to date augur well for a continuation of this program next year.

PLATE LXII. Pavement marker developed and used in Division VII.

PLATE LXIII. Pavement marker developed and used in Division X.

One of the big factors affecting this method is care of traffic following the application of the penetration coat. During this period the oil lies free on the roadway, and while signs are placed warning of fresh oil and advising reduction of speed, the impatient motorist does not heed the warning, or the careless one, regardless of his fellow traveler, passes at high speed, splattering the fresh oil over the car and occupants.

In future oiling a more stringent control must be exercised over both our operations and the handling of traffic. Lack of control makes the work unpopular with the public to a degree which renders questionable its advisability.

Mixing Method. This method, while necessitating more oil, presents less interference to traffic. The base is first scarified to a uniform depth of 3 inches, then harrowed. After harrowing, one-half the width of the road is covered with oil, carrying 60 per cent to 70 per cent of 80-degree penetration asphalt, heated to between 150 degrees and 200 degrees F., applied with a pressure distributor at the rate of one-half gallon per square yard of surface treated. Immediately after oiling the road is again harrowed, to prevent the oil picking up on the equipment doing the mixing. Power graders, starting at the center, grade the material in a windrow to the edge and back again to center, the operation continuing until uniformity of mix is secured, when it is bladed into place. This process is repeated until about one and one-half gallons have been applied per square yard of surface. The other half of road is treated in a similar manner, the resulting job being a thoroughly mixed 3-inch course of crushed rock bound with oil. Some sixty miles of road have been so treated in 1926, with satisfactory results.

In addition to applying these preservative seal coats, light oil was used quite generally throughout the state as a dust palliative, some 495 miles of road being so treated.

In conclusion, it may be stated that fuel oils of 18-degree to 21-degree Baume gravity containing 40 per cent to 45 per cent of 80-degree penetration asphalt, applied when needed at the rate of 1/6 gallon to 1/9 gallon per square yard of surface treated, constitute an effective dust palliative.

PAVEMENT MARKINGS

Paint stripes have been applied to many miles of pavement, creating traffic lanes, which tend to uniformity of movement and speeding up of traffic.

On 15, 18, 20, and 24-foot pavements, the stripe is applied along the center line, while on 30-foot or 40-foot pavements, three or four 10-foot traffic lanes are made.

Paint marking machines have been developed in the various divisions. With some machines the paint is brushed onto the pavement, and with others it is sprayed on. Both types are usually drawn by light trucks equipped with guides for determining the location of the line to be painted.

Under normal conditions, from one to two miles of stripe can be applied per hour. An asphaltic or white lead paint is ordinarily used.

PLATE LXIV. Caution sign over State highway at railroad crossing in Sacramento County.

PLATE LXV. Railroad crossing sign on pavement near Petaluma, in Sonoma County.

WARNING SIGNALS

Despite the numerous fatalities occurring at railroad grade crossings, the ordinary motorist accords scant attention to the warning signals installed for his protection. The signals in vogue include the illumination of crossings, the alternate heavy diagonal white paint stripe and the words "R. R. XING" spaced on the pavement at 50-foot intervals for 300 feet each side of the crossing, the electric or gas operated flashing signal, the large illuminated sign bearing the words "DANGER R. R. XING," and at one particularly bad crossing, a wigwag signal.

A description of this latter signal is given, not as having more merit than the others, but rather because of its unusual appearance. The wigwag consists of 2" x 4" x 18" metal slats on 3" centers suspended over the pavement by a $\frac{1}{2}$ -inch cable. The word "CAUTION" is shown in red against a white background on the slats. A two-foot length of whitened rope swings from the bottom of each slat their ends clearing the pavement by approximately 10 feet.

The efficacy of any type of warning signals, however, is problematical, as no living man will admit his indiscretion and a dead man can not. It should be accepted as axiomatic that a good crossing is one where the grades are separated.

COST ANALYSIS

The relative cost of maintaining roads of the various types and under the varying conditions of climate and traffic are subjected to careful analysis. The system of accounting recently installed was so planned that the cost figures can be readily obtained for comparative purposes and study. To this end the work is classified as follows:

General maintenance	G.M.
Reconstruction	Re.
Improvement	Imp.

The costs under these three general classes are further segregated in accordance with the following functional classification:

T.W.—(Traveled Way) relates to the portion of the highway customarily traveled.

R.S.—(Roadsides) includes earth grading, grass removal, etc., outside the traveled way.

S.—(Structures) includes work incident to repair or restoration of structures.

S.D.—(Safety Devices) relates to work or devices for the warning or direction of traffic.

I.S.—(Improved Shoulders) relates to work on shoulders constructed of material of a higher quality than the adjacent roadsides but inferior to the central pavement.

T.—(Trees) relates to work on trees planted under state authorization.

D.—(Drifts) relates to work in connection with removal of snow or sand dunes.

M.—(Miscellaneous) relates to charges in connection with permits, traffic census, bridge tenders and similar items not properly a charge under any of the other headings.

A study is under way looking toward a comparison of maintenance cost of the various types of pavements, as well as a comparison of the maintenance cost of similar types in different localities.

At the end of this appendix will be found a table showing maintenance fund expenditures segregated into General Maintenance, Improvement and Reconstruction, distributed by counties and routes.

FIGURE 9. Graph Showing Distribution of 1925 Maintenance Dollar.

PERMITS

Chapter 99, Statutes of 1915, forbids the opening of any state highway for the building or removing of any structure thereon, or the trimming, removing, or planting of any tree or shrub on the state highway without a permit from the California Highway Commission.

Chapter 400, Statutes of 1915, forbids any encroachment upon the state highway by the erection of any sign, picture, transparency or advertisement without a permit from the Highway Commission.

Chapter 266, Statutes of 1923, forbids the operation of any vehicle having cleats or protuberances on the wheels, or any vehicle over a specified weight or a specified width, or the operation of more than one trailer, without a permit from the highway department having jurisdiction over the road where the vehicle is to be operated.

With increased mileage and the attendant development of property adjacent thereto, the issuance and supervision of permits has become a work of considerable magnitude. Traffic matters and temporary encroachments are handled by the division engineers, the more important requests being passed on by the headquarters office.

Steps are now in progress to establish an ultimate design for each road section, within the limits of which no encroachments will be permitted. The interference of encroachments with present reconstruction projects demonstrates the necessity of this step. When this ultimate design is in effect, the issuance of permits should be more of a routine matter than now.

During the past biennium 7200 permits were issued as compared to 4790 permits issued during the preceding biennium.

MAINTENANCE FUNDS AND EXPENDITURES

At the beginning of each calendar year, the funds available for maintenance and repair of state highways are programmed according to the various classes of work performed. The program for the year 1926 is shown in the following table:

1926 MAINTENANCE PROGRAM.

Division	Miles	General maintenance	Purchase and repair of small tools	Tree maintenance	Major slide removal*	Specific maintenance and betterments*
I.....	546.5	\$300,575 00	\$3,000 00	\$300 00	\$116,044 75	\$41,804 00
II.....	844.4	401,090 00	4,000 00	3,800 00	24,800 00	20,967 00
III.....	878.8	417,430 00	4,000 00	17,000 00	29,443 29	72,795 70
IV.....	451.9	327,627 50	3,300 00	4,200 00	26,450 00	94,091 15
V.....	472.1	224,247 50	2,300 00	1,500 00	15,000 00	32,738 46
VI.....	629.6	267,580 00	2,700 00	25,000 00	8,752 50	13,113 30
VII.....	538.6	390,485 00	4,000 00	7,500 00	99,132 68	99,109 00
VIII.....	824.9	433,072 50	4,300 00	1,000 00	42,775 00	74,766 68
IX.....	439.0	175,600 00	2,000 00	-----	1,500 00	47,222 00
X.....	697.6	331,360 00	3,300 00	15,000 00	1,900 00	48,060 00
Totals.....	6,323.4	\$3,269,067 50	\$32,900 00	\$75,300 00	\$365,798 22	\$544,667 29

Division	Maintenance stations*	Permits	Total	
I.....	\$23,675 00	\$200 00	\$485,598 75	
II.....	13,587 25	300 00	468,544 25	
III.....	11,145 60	2,000 00	553,814 59

IX.....	21,522 88	150 00	247,994 88	
X.....	1,475 00	2,500 00	403,595 00	
Totals.....	\$137,913 23	\$19,350 00	\$4,444,996 24	Say \$4,500,000 00
Administration and engineering.....			500,000 00	500,000 00
			\$4,944,996 24	Say \$5,000,000 00

*In these three subdivisions no program by divisions was made, and total authorization to September 2, 1926, are shown instead of the programmed amount.

The expenditures under the various headings shown in the maintenance program are kept according to the budget items of maintenance, reconstruction and improvement, and are shown by years in the following table:

STATE HIGHWAY MAINTENANCE FUNDS EXPENDITURES BY YEARS

Year	Reconstruction and improvement	Maintenance	Total expenditures	Receipts
1914 -----	\$48,540 10	\$35,395 75	\$83,935 85	\$467,690 60
1915 -----	311,147 77	143,746 63	454,894 40	777,077 33
1916 -----	788,851 00	410,961 10	1,189,812 10	803,987 21
1917 -----	230,122 73	542,360 42	772,483 15	1,100,568 80
1918 -----	352,699 39	650,427 43	1,003,126 82	1,440,437 60
1919 -----	569,910 55	946,615 65	1,516,526 20	1,825,553 21
1920 -----	478,361 67	1,336,363 92	1,814,725 59	2,447,513 08
1921 -----	1,694,294 33	1,602,639 56	3,296,933 89	3,028,426 37
1922 -----	2,249,456 64	2,132,032 73	4,381,489 37	3,648,281 21
1923 -----	1,445,068 71	2,345,772 62	3,790,841 33	4,891,160 62
1924 -----	5,113,788 95	3,664,924 68	8,778,713 63	8,825,101 67
1925 -----	4,830,671 52	3,851,490 53	8,682,162 05	10,140,043 97
1926—Jan. 1, to June 30—	3,122,439 53	2,668,987 63	5,791,427 16	4,396,252 66
Total to June 30, 1926----	\$21,225,352 89	\$20,331,718 65	\$41,557,071 54	\$43,792,094 53

In order to conserve as much as possible of the available funds for reconstruction work, which is urgently needed to keep pace with the constantly increasing traffic, it is our purpose to keep expenditures for general maintenance to a minimum, allowing only sufficient funds to retain the road in such condition as not to lose the value of the original investment in the roadway and to keep the roadsides in a presentable condition.

SNOW REMOVAL

During the past year, about 135 miles of high altitude roads were kept clear of snow by snow plows, tractor drawn. However, no definite removal program obtains, although snowfall data have been in process of collection during the past two years. In general, roads having snowfall have a definite summer travel period, and are pleasure or scenic routes.

A number of these routes are now being relocated and consideration is being given to the freedom from, and facility of removing, snowfall.

STORAGE AND HOUSING

In accord with an established policy, the Commission has during the past two years acquired, either by gift or purchase, forty-four maintenance sites, and in some cases erected thereon foremen's cottages, bunkhouses, and trucksheds.

These sites are usually located at important road centers and on mountain or desert sections where it is difficult to secure either accommodations for labor or storage for equipment.

The investment made usually does not exceed the rental charge for these accommodations, capitalized at 5 per cent, and in addition assures a higher type of labor and protection for equipment.

TRAFFIC CENSUS

Counts of traffic have been made at strategic points throughout the state highway system since 1920. The work was carried on in that year and continued in 1922 by the United States Bureau of Public Roads and the California Highway Commission, in cooperation with a number of the counties. In 1924 the Highway Commission assumed entire responsibility. The number of stations was increased and a consistent effort made to secure information to permit an analysis of the trend of traffic. The traffic count is taken twice each year.

The information gained is used in determining the types of surface, alignment, maintenance and reconstruction. Frequent calls for this data are made by various civic, commercial and recreational organizations.

Through traffic plays an important part in highway transportation, but local traffic is the larger factor. Construction, reconstruction and maintenance problems are therefore governed largely by the prospective development of the adjacent country. The Commission, through its engineers, is able to take this phase into account intelligently only through the information gained by consistent periodical counts.

In the table of "Traffic Census on the State Highway System" (page 118), there is shown the count of vehicles at representative points along the various routes of the highway system for the years 1922, 1924, 1925 and 1926. The 1922 count was taken at various times of the year, but the figures shown are for holiday traffic, where available. The figures for the other years were taken during the summer months of July and August on Sundays. The total count is shown without consideration of types because of limited space. The actual records show traffic segregated into automobiles, light trucks, heavy trucks, trailers, busses, tractors and horse-drawn vehicles.

The traffic count for 1925 shows an increased use of the highways over 1924 of about eleven per cent, and the 1926 count shows an increase of about three per cent over 1925, using the totals of the accompanying table as a basis.

The motor vehicle registration for 1925 shows an increase of nine per cent over 1924 and for the first nine months of 1926 an increase of 6.8 per cent is shown over the 1925 totals.

The accumulation of data and study of traffic has not progressed to the point where a definite relation between motor vehicle registration and use of highways can be stated. It is evident, however, that while the traffic curve, as a whole, is rising, it is at a slower rate than for several years past. This is an important point in the planning of highways. The main value of the traffic study lies for some time in applying the information to the local problems of one vicinity or route.

PLATE LXVII. A heavy growth of puncture vine along the State Highway.

STORM DAMAGE

The problem of restoration, occasioned by slides, fire, storms and floods, is one that annually confronts the department.

The magnitude of this work is best realized, when it is known that this year in Division I, on the Redwood Highway, some 200,000 cubic yards of slides were removed by power shovels and hydraulicking. In Division VII, near Santa Monica, high tides in conjunction with heavy storms undermined to the pavement's edge, long stretches of embankment which required replacement and rock riprap protection. A cloud-burst along the Salton Sea in Division VIII eroded miles of shoulder, filling culverts and covering the pavement with from one to three feet of sand. In Division II, the destruction by fire of a bridge across the Klamath River near Orleans, necessitated the construction of a temporary bridge some 500 feet long.

In general, this work in its preliminary stage is handled by the regular maintenance crews, which are later augmented and specially equipped to facilitate the early continuance of traffic.

OBNOXIOUS WEEDS

The control of obnoxious weeds within the highway right of way is each year becoming more of a burden on the maintenance organization. While formerly the yellowstar thistle and mustard weed demanded our attention, there has appeared within the past few years a more serious infestation, known as the puncture vine. It has earned this name because of the upward pointing sharp spine, of which there are several to each burr.

They are picked up by auto tires and gradually work their way into the casing, weakening the fabric if not actually puncturing the tire. An average size plant may bear as many as 10,000 burrs, within each of which are from two to four seeds, ready for distribution through the usual agencies of wind, vehicles and animals. The impossibility of control over these agencies, together with restrictions imposed by adjacent grain fields or loose stock in the use of fire or arsenical solutions, makes eradication impossible and control very difficult.

On the advice of Director G. H. Hecke of the California Department of Agriculture, the puncture vine pest is being combated either by hoeing or scraping once a week and burning the plants so cut, or by applying sprays consisting of slop distillate, fuel oil or Diesel engine oil. The spray of Diesel engine oil is seemingly the most effective, the cost of each application being about two and one-fourth cents per square yard of area treated. A small spray pump outfit is usually mounted on a light truck, as its mobility makes possible the treatment of scattered infestations with a small force. As our activity is necessarily limited to areas within our right of way, unless full cooperation is had from the adjacent property owners and various County Horticultural Commissioners, our work will avail nothing, as these areas will be reseeded from outside faster than we can eradicate.

PLATE LXVIII. Storm damage on State Highway in Imperial County.

PLATE LXIX. Storm damage along the Coast Highway in Los Angeles County.

BRIDGE TRAFFIC TREADS

The placing of steel traffic treads has been tried on several bridges in the state to aid in prolonging the life of the unsurfaced timber floors and the life of the structure itself.

These treads are made of $\frac{3}{16}$ -inch steel plates, twenty to twenty-four inches in width, secured with lag screws and spaced so as to accommodate two lines of traffic on the bridge, where possible. The treads are proving satisfactory for the purpose intended, and are also appreciated by the motorist, as they afford a smooth riding surface and eliminate the hazard to tires from spikes working up through the planks. They also materially decrease impact on the bridge and save wear on the plank floors.

While the use of steel treads has been of short duration, our present experience points to the following conclusions: First, the desirability of installing them only on bridges having tangent approaches, owing to traffic's difficulty on curves to squarely meet the treads; and second, for two-way traffic on bridges of eighteen feet or less in width, three treads instead of four treads are preferable, due to motorists' disinclination to drive too near the wheel guard.

MILEAGE

A tabulation of the mileage of state highways under maintenance segregated by divisions and type of road is shown on the opposite page. The figure below shows graphically the relative mileage of the various types under maintenance.

MILEAGE OF STATE HIGHWAYS UNDER MAINTENANCE BY TYPES. June 30, 1926.

PLATE LXX. California Highway Commission Shop at Redding.

APPENDIX H

EQUIPMENT DEPARTMENT

By R. H. STALNAKER, Equipment Engineer

The Equipment Department of the California Highway Commission resulted from the need for maintenance of the state highways, a function most conveniently performed by day labor, thereby requiring the ownership and operation by the state of equipment in proportion to the need for maintenance. Some construction work performed by day labor, including the present prison road camp operations, also requires ownership and operation of equipment.

With the acquisition at low cost, from the Federal Government, of a large amount of excess war equipment, a centralized control became necessary to insure its best utilization, and to assist and advise the several division engineers in its use. An assistant highway engineer was assigned in 1919 to such duties. His activities were first confined to the selection of desirable material from lists submitted by the government, to the distribution of such material when received, and to a general supervision over its use in the several divisions. The constantly growing importance of the equipment phase of highway construction and maintenance has resulted in a gradual expansion of the activities of this department, until it is now a self-supporting subdivision of the commission. One of its functions now is to hold the inventory and capital investment to a minimum, consistent with the needs of the work.

The headquarters staff of the Equipment Department consists of the writer as Equipment Engineer; W. J. Gough, Assistant Highway Engineer; J. K. Kinsman and F. W. McManus, Assistant Equipment Engineers; F. L. Richardson, Senior Equipment Engineer; Chas. H. Ryon, Chief Clerk, and F. E. Burnside, Shop Superintendent.

The directing personnel of the various subdivisions of the department are:

- Shop 1—J. W. Grace, Supt. of Equipment, Willits.
- Shop 2—I. H. Sanford, Supt. of Equipment, Redding.
- Shop 3—D. H. Greeley, Junior Equipment Engineer, Sacramento.
- Shop 4—W. A. Smith, Supt. of Equipment, San Francisco.
- Shop 5—R. P. Hamlin, Shop Supt., San Luis Obispo.
- Shop 6—E. S. Anderson, Supt. of Equipment, Fresno.
- Shop 7—W. B. Cannon, Supt. of Equipment, Lankershim.
- Shop 8—R. A. Allen, Supt. of Equipment, San Bernardino.
- Shop 9—M. E. Mihills, Junior Equipment Engineer, Bishop.
- Shop 10—M. J. Small, Junior Equipment Engineer, Sacramento.

These men have charge of the shops in the respective divisions and keep in close touch with the division's various activities in an effort to maintain all equipment in an uninterrupted operating condition.

To further assist in quick repairs to field maintenance equipment, field mechanics, each provided with adequate transportation, tools, and repair parts are stationed at points of vantage in each division.

All motor vehicles owned by the Highway Commission are now painted a uniform French gray color, and are marked with the Commission's seal. Passenger vehicles also carry the words "For Official Use Only." All painting is done by this department, and by the use of air brushes a large saving in cost is realized over commercial painting prices, as well as great saving in time.

RENTAL SYSTEM

Prior to January 1, 1924, the equipment accounting system made no provision for depreciation, and the method for distribution of cost of repairs was not accurate. The repairs to maintenance equipment were charged to a suspense account, which was prorated annually against the direct expenditures for such work, and repairs to equipment employed on day labor construction were charged against the job. This often resulted in a small job being charged with the entire cost of an extensive overhaul on an article which might have been used only a few days on that particular job, or in an overhaul properly chargeable against some day labor job being charged against the suspense account for repairs to maintenance equipment. The man releasing equipment generally claimed it was in good condition when transferred, while the recipient often claimed it needed extensive repairs when delivered.

Considerable study was given to this question, and in order to provide a means for equitably distributing the cost of repairs and upkeep, and for assessing a proper allowance for depreciation against the work upon which equipment was employed, the field equipment of the Commission was placed on a rental basis on January 1, 1924.

Besides affording a more accurate method of assessing upkeep and depreciation against the various jobs, the rental system provides the engineers with a definite basis on which to make preliminary estimates and final reports of the cost of work, and assures a fair distribution between jobs of the burden of equipment cost.

Some uncertainty was originally encountered in fixing the rental rates on the various articles, on account of lack of accurate information as to cost of upkeep, and length of life. After adjustments following the first year's experience, the rental rates have become stabilized, and as a whole have worked out well.

The motor vehicles were placed originally on a daily rental basis, and the other equipment on a monthly rate, but on April 1, 1926, the use of the daily rate was extended to include the greater part of the remaining equipment, in the belief that this method simplified the proper distribution of rental costs to the several jobs.

EQUIPMENT PURCHASES

A new method of handling equipment purchases was inaugurated on January 1, 1924, in connection with the institution of the rental system, and the figures given below are for the period from January 1, 1924, to June 30, 1926, and therefore duplicate for a six months period the figures given in the last biennial report.

PLATE LXXI. Rubber-tired grader. Maintaining State Highways in San Diego County.

PLATE LXXII. Asphalt heating kettle built at the Sacramento Shop.

During this thirty months period a total in round numbers of \$1,277,000 was expended for the purchase and construction of equipment, of which \$485,000 was expended for motor vehicles, and the remaining \$792,000 for other equipment. The expenditure for motor vehicles was for the purchase of passenger cars and light trucks to replace those worn out in service, and for making over and equipping trucks received from the Federal Government. The purchases of other equipment cover a wide variety, major items being as follows:

- 27 asphalt heating kettles.
- 11 air compressor units.
- 6 rock crushers.
- 90 seven- and eight-foot rubber-tired graders.
- 11 seven-foot steel-tired graders.
- 4 twelve-foot steel-tired graders.
- 30 1-man grader units.
- 73 1-man grader attachments.
- 128 McCormick-Deering and Fordson tractors.
- 12 2-ton Caterpillar tractors.
- 24 30-hp. Caterpillar tractors.
- 3 60-hp. Caterpillar tractors.
- 7 $\frac{1}{3}$ -yard gas shovels.
- 5 $\frac{3}{4}$ -yard gas shovels.

The graders equipped with rubber-tired wheels and roller bearings have more than fulfilled our expectations, and the bulk of our purchases in the smaller size graders have been of this type. A few light 7-foot graders with steel tires have been purchased for use under special conditions. On the larger graders for use in construction work it is not believed that the extra cost of the rubber tires and roller bearings is warranted.

The use of light wheel-type tractors, both as independent units and installed in the so-called "one-man grader" units, has been extended considerably during the past biennium to meet the demand for cheap road dragging equipment. A number of track attachments for Fordson and McCormick-Deering tractors have also been purchased for use with fresno scrapers.

EXCESS WAR EQUIPMENT

The distribution of equipment by the federal government was definitely closed early in the current year, and during the first part of this biennium only a limited amount of equipment was received from that source, the only considerable item being twenty-three Standard "B," or so-called Liberty trucks. A few machine tools were also secured.

However, the distribution of explosives is still being continued, and during the past biennium approximately 600,000 pounds of sodatol and pyrotol have been secured at a cost approximately one-half that of an equivalent grade of commercial dynamite.

In addition to the above, a few machine tools and several small lots of truck parts have been secured by transfer from other states and from the Bureau of Public Roads by the payment of accrued charges and freight to destination.

PLATE LXXIII. Type of caterpillar tractor and steel drag. Maintaining State Highway in San Bernardino County.

PLATE LXXIV. Type of rubber-tired tractor and steel drag. In use on State Highway in San Bernardino County.

SHOPS

During the past biennium new shops have been constructed at Redding, Fresno, Lankershim and San Bernardino, and plans are being prepared for a shop at Bishop. With the completion of the Bishop shop, adequate facilities for handling all ordinary repair work will have been provided in each division, the work of Divisions III and X at Sacramento being handled by the headquarters shop.

The headquarters shop at Sacramento is the largest of our repair plants, and is one of the best equipped shops of its kind on the coast. Most of the special equipment needed on our work is constructed in this shop.

Each of the new shops is furnished with an overhead traveling crane, built at headquarters shop, and a smaller portable floor crane which enable us to handle the heavier part of our work with a minimum of effort. All the shops have an adequate equipment of machine tools and can handle any ordinary job of automotive repair or minor equipment construction. Cylinder grinding outfits of modern design are installed in the Sacramento shop to serve the northern part of the state, and in the Lankershim shop to serve the southern part. Much maintenance equipment, such as asphalt kettles, road drags, truck dump bodies of various sizes, trailers, power hoists for mounting on trucks to handle heavy riprap, and heavy power units, are built in our own shops at reasonable costs. By constructing special equipment ourselves, we are able to get some refinements desirable for our work, not obtainable in the commercial articles.

One of the late achievements is a semi-trailer on which is mounted a tank for tree watering, the trailer being directly connected to a McCormick-Deering tractor. This unit has a very short turning radius, especially advantageous on highway grades. The tractor is released for other use when the tank is not needed for tree watering.

FINANCES

The figures given below are compiled from the books of the Equipment Department and include some transactions not yet cleared on the books of the Accounting Department. The figures therefore are not exactly the same as those found in the financial statement of the department. They reflect closely the status of the Equipment Department were all transactions completed which pertain to the period ending June 30, 1926, but do not include certain corrections which should be made for items in suspense both at the beginning and end of the period.

During the first thirty months of the equipment rental system, the total rental charges were \$3,561,108. Expenditures for upkeep of equipment amounted to \$2,001,783, and for administration to \$356,943. Miscellaneous expenditures, including the cost of transfer of equipment, purchase of shop tools, etc., as well as the adjustment of some outstanding accounts upon the headquarters books, totaled \$111,947. The balance available as a depreciation reserve, after deducting the above expenditures, amounts to \$1,090,435. Up to June 30, 1926, approximately \$659,000 of this reserve had been expended in the purchase of replacements and additional equipment.

PLATE LXXV. Tree watering tank mounted on semi-trailer. Built at Fresno Shop.

PLATE LXXVI. Derrick mounted on truck, built by Equipment Department. Placing riprap near Santa Monica.

During the first few months of the operation of the rental system, all equipment purchases were financed by special allotments from the other funds at the disposal of the Highway Commission, pending the accumulation of a depreciation reserve. Some purchases of additional equipment have since been made from the general funds. Such special allotments during the thirty-months period amount to \$618,000, making a total expenditure for new equipment during the thirty-months period of approximately \$1,277,000.

The construction and equipping of the new shops at Redding, Fresno, Lankershim and San Bernardino, as well as some minor improvements at some of the other shops, have also been financed by appropriations from the general funds, and during the thirty-months period approximately \$165,000 has been expended for these purposes.

Following is a diagram showing graphically the allocation of the income received from rentals during the thirty-months period under consideration:

FIGURE 11. DISTRIBUTION OF EQUIPMENT DEPARTMENT REVENUES, 1924-1926.

PLATE LXXVII. California Highway Commission Shop at Fresno.

PLATE LXXVIII. California Highway Commission Shop at San Bernardino.

ACCOUNTING

During the biennium a survey of the accounting requirements of the department was made with a view to determining what information of an accounting nature was required as an aid to the intelligent and economical administration of the equipment owned and used in the various activities of the California Highway Commission. An exhaustive study of the problem covering a period of approximately five months was made, during which time the results of various methods of accounting control were studied.

After this study had been completed, it became apparent that, if the result desired by the inauguration of an equipment rental system was to be realized, it would be necessary to gain absolute accounting control over all expenditures for the purchase of equipment, the repairs of equipment, the sale of equipment, and the general administration of the equipment department. In order to gain such control, the following principal problems presented themselves:

To collect accurate accounting data so as to show cost of operation of the department as a whole, in order to have available at all times reliable statements of facts by which the adequacy of the rental rates as a whole could be determined;

To collect accurate cost accounting data in such a manner that there would be available at all times reliable statements of facts by which the adequacy of the rental rates for each class of equipment could be determined;

Some accounting method by which cognizance could be taken of the important element of cost, namely, the depreciation of the equipment owned and operated;

Speed of collecting cost and financial facts and the diffusion of such data, in order to aid all administrative officers to gain effective and economical financial or cost control over all activities in connection with the operation of the department.

As a first step in solving these problems, it was deemed necessary to gain positive accounting control over all expenditures covering purchases of equipment, labor and materials expended for the upkeep and administration of the equipment in service, so that at all times the value of materials and supplies purchased and received, value of the materials and supplies expended, and the value of the inventory of materials and supplies on hand would be known, also to analyze the pay roll expenditures in such manner that the labor costs for all activities would at all times be immediately available. This step involved the pricing and recording on the books of account, of the physical inventory of all materials and supplies on hand in the department, and also the appraising, and recording on the books of account, of the physical inventory of all equipment on hand.

To solve these problems satisfactorily from an accounting standpoint, the plan which seemed the most feasible was to design an accounting system in such manner that in each of the shop offices a set of general or control ledger accounts would be kept, which control accounts would at all times be in reconciliation with the control ledger accounts on the financial books in the central office at Sacramento. By this method all detail accounting would be confined to the shop offices, the details accumulated in such manner that no further handling of detail would be necessary to record the transactions in the central office financial or

PLATE LXXIX. 1½-ton truck. Power dump body built at the Sacramento Shop.

PLATE LXXX. Heavy duty low-bed trailer, built at Fruitvale Shop, Division IV.

control books, dependence to be placed upon a method of monthly reporting from each division shop office to show the results of each month's operation.

In order that effective control be kept on the expenditures for the upkeep of equipment, it was decided that this control should be extended to cover each unit of equipment. To accomplish this end, a system of accounting was placed into effect which would show day by day expenditures for labor and materials, accumulated to show total charges for each day on each unit of equipment being repaired both in the shop and in the field. The job order system of accounting for repairs was deemed to be the most satisfactory, that is, a separate job order used to govern the repairs to each unit of equipment.

By accounting the rental earned by each unit of equipment separately as well as the cost of upkeep and depreciation, it is possible at all times to determine the adequacy of the rental rate for each unit of equipment as well as for each class of equipment in service, also for all equipment in service.

In order to gain complete control over all elements of expense, it was decided that an accurate control over all materials and supplies in the shop storehouses should be effected through the means of the perpetual inventory system. In order to provide for the handling of the wide range of repair parts necessary to be carried in stock, the feasibility of using mechanical aids in the handling of the immense amount of detail involved in the keeping of the perpetual inventory and the cost accounts was considered. A study was made of the various mechanical appliances on the market and their application to similar problems of storekeeping and cost accounting. After due consideration and a trial test run of about three months duration on stock keeping, pay roll distribution and cost accounting, it was shown that bookkeeping machines could be used profitably on work of this nature. Accordingly bookkeeping machines were purchased and installed in all of the shop offices, except shops Nos. 3 and 10.

The new accounting system, with the aid of the bookkeeping machines installed, furnishes: Accurate day to day check of all materials received, disbursed and on hand, both as to quantity and value; accurate time keeping and pay roll distribution, showing the total pay roll expenditures for each day and the total amount of pay roll for any period during the month; total charges for labor and materials to job orders day by day and for any period during the month. These accomplishments make it possible for each administrative officer in each shop office to be in possession of accurate financial and cost data at a moment's notice during the month.

At the end of each month, the accounting department of each shop furnishes a statement of the results of each month's operations as well as the results of operations for the period beginning with the first of the fiscal year to the date of the report. Copies of this statement are furnished to the local shop administrative officer, the Equipment Engineer at the headquarters shop at Sacramento and the central office accounting department at Sacramento. After the monthly reports have been received by the Equipment Engineer from the division shop offices, a consolidated report is compiled, showing by divisions, the results of the operations of the Equipment Department as a whole for the period beginning with the first of the fiscal year to the date of the report.

This report is intended to provide the administrative officers of the Commission with a condensed general statement showing results of the operations of the Equipment Department as it functions under the rental system. This report shows the total value of the inventory of the stores on hand at the date of the report; a general analysis of the cost of operating the stores for the period beginning with the first of the fiscal year to the date of the report; the total amount of the stores overhead charges applied to the value of the stores disbursed during the fiscal year; total value of the volume of work performed in the shops during the fiscal year; a general analysis of the shop overhead charges for the fiscal year; the amount of shop overhead charges applied to the value of shop work performed during the fiscal year; a general analysis of the equipment administration cost for the fiscal year; also a summary showing financial results of operations. This summary shows total of equipment rental billed during the fiscal year to the engineering department, from which amount is deducted the total cost of repairs, the total cost of administration and the total calculated accrued depreciation for the period beginning with the first of the fiscal year to the date of the report. The net result shown by the summary of this report indicates to the administrative officers of the Commission the financial or economic result of the equipment department operations.

PLATE LXXXI. State Highway in Merced River Canyon, Mariposa County, constructed with convict labor.

APPENDIX J

DEPARTMENT OF PRISON ROAD CAMPS

By BEN H. MILLIKEN, Superintendent

The convict pay law, which provides that a daily wage of not to exceed \$2.50 shall be paid prisoners from the state penitentiaries employed in the construction of highways by the California Highway Commission, has been in operation three years. During this time a gross wage of \$2.10 per working day has been paid the prisoners. There has been deducted from this amount the entire cost of their maintenance, which includes board, camp maintenance, transportation from the prison to the camps and from the camps to the prison, guarding, medical attention, shoe and clothing repair, barbering, portion of expense of purchasing agent's department, salaries (including clerical work on convict records in camp as well as the entire expense of the headquarters office), compensation insurance for free men in charge, reward for capture of escapes, together with the expense of search, and all clothing, bedding, tobacco, and toilet articles.

Previous to the enactment of the pay law, it cost an average of \$2.10 per day to keep a prisoner at a road camp. With closer cooperation and economy on the part of both the prisoners and the free men in charge, this cost has been reduced to \$1.813 per day. The daily average saving of \$0.287 for each prisoner represents the net earning, and it will be readily seen that under this plan the use of convict labor costs no more than prior to the enactment of the pay law. On the contrary, the extension of the honor plan, the payment of wages, the betterment of camp conditions, and the opportunity for individual recognition of merit afforded by closer contact with highway and prison officials, have all tended to increase the efficiency of the prisoners as road builders.

The 1900 prisoners that have been through the road camps during the last three years have worked 445,307 days or 2196 years of prison time. The net loss of prisoners due to escapes is twenty-six. The records at the prison and parole office show that only 2 per cent of the prisoners released from the camps have failed to make good.

The total net earnings are \$127,594.78, of which \$29,988.53 has been allotted to dependents. The prisoners have left the camps with an average of \$85 each, as compared with the \$5 that is provided upon release from prison, which is inadequate to enable a man to start life anew. The largest saving by any prisoner to date is \$500. The average time served in the camps is ten and one-half months.

The reward of \$200 provided for the capture and return of an escaped prisoner has proven an inducement to peace officers, and 72 per cent of the escapes have been apprehended.

In 1924 a new plan for selecting prisoners for the road camps was worked out, which has resulted in a much better grade of workers than before. The requirements for eligibility to road camp assignment include a voluntary application by the prisoner, perfect physical condition, a clean record in the prison, and the endorsement of the department head under whom he has worked. Every prisoner must serve the

major portion of his sentence behind the prison walls, and even in the case of life termers the prisoners who are sent to road camps must be eligible for an early parole.

At the present time there are three camps in operation. The one at Bloss, on the Merced River, under the supervision of Superintendent W. B. Albertson and Sergeant H. M. Williams, is completing the all-year Yosemite highway. The second camp, near Crescent City in Del Norte County, under the supervision of Superintendent A. N. Lund and Sergeant A. L. Veuve, is working on the Redwood highway. The third camp, near Wilbur Springs in Lake County on the Ukiah-Tahoe highway, is under the supervision of Superintendent G. W. Lane and Sergeant Thos. McDonough.

In a report made to the Highway Engineer in 1917, many years prior to the enactment of the pay law, the following statement described the attitude of the prisoners in the camps at that time:

"The atmosphere of the camps is charged with secretiveness, sullenness and silence. Conversation is in low tones. No laughter or song is heard. There is always something to kick about. The desire to be efficient is absent, for there is no reward for same. The convict does as little work as possible and is as extravagant with all material as possible."

The reorganization of the prison road camps in 1923, under the Alco plan, providing a wage for the prisoners and concentrating the supervision of the camps under one department, brought about many changes, and the present atmosphere of the camps is in direct contrast with the unsatisfactory conditions as reported in 1917. The prisoners and the free men in charge now work in complete harmony and understanding of their respective duties and privileges. Superintendents and foremen who have had experience in handling both prisoners and free men in construction work are unanimous in the opinion that the prisoners are more satisfactory in every respect. One of the most significant proofs of this conclusion is the fact that the labor turnover in a free construction camp is approximately 60 per cent per month, while in the prison camp it is but 11 per cent per month.

Fights among the prisoners are practically unknown, and although 80 per cent of the men at the camps are serving time for burglary or robbery, they do not steal from one another.

The State Board of Prison Directors in acting on paroles for the road camp prisoners take into consideration their work and conduct, and also their financial standing. The prisoners realize that failure to show a saving after being at camp for a reasonable length of time will mean a denial of parole, and also result in being returned to the prison with loss of credits, therefore they make every effort to economize.

Recreational activity has been confined to camp limits, and baseball games with outside teams are not allowed. Libraries are well stocked with good books. The San Francisco News Bureau supplies several copies of all the latest magazines to each camp, free of charge. The San Francisco Film Board of Trade calls on each of the leading motion picture companies to send a comedy and feature to the camps every week. Radios has been supplied by newspapers and various individuals interested in welfare work. All expenses incidental to providing

PLATE LXXXII. State Highway between Briceburg and El Portal, Mariposa County, constructed with convict labor.

PLATE LXXXIII. State Highway constructed with convict labor along Smith River, in Del Norte County.

recreational activities at the camps are paid from the "Prisoners' Fund," derived from forfeited earnings of prisoners who violate camp rules.

The eight hours of hard work in the open air, together with the wholesome recreation provided, has kept the camps free from the vicious practices that prevail behind the prison walls. In the past three years the prison camps have operated in ten different localities, and during this time there has not been one complaint from free people residing near the camps as to the conduct of the prisoners.

Each prisoner, before road assignment, is given a pamphlet containing the simple rules and regulations governing his conduct in the prison camps. The prisoners have learned that wasting materials, including food, drawing commissaries that are not needed, staying in from work by feigning sickness, trading with free people, loafing on the work, or agitating in camp will all result in being immediately returned to the prison. In cases of delinquency, after personal investigation by the writer, a report is sent to the State Board of Prison Directors, and if the prisoner is found to be at fault he not only loses all credits earned, but in most cases forfeits his chance for a parole.

The practice of hiring paroled men in prison camps has been discontinued. Much contraband was brought into the camps by these men and it was possible for prisoners to send mail out without it being censored.

A comprehensive accounting system has been worked out which has resulted in not only relieving the division offices of responsibility in connection with this phase of the work, but has made it possible to reduce the clerical force in the field more than 50 per cent. The complete records covering the previous month's business are received from the camps not later than the tenth of the month, and by the twentieth of the month a detailed report, as shown on the opposite page, is issued by this department.

To sum up the results of the first three years of operation under the provisions of the pay plan and consolidated camp management, we find the following:

The total expenditure for roads built by convict labor was \$2,827,-615.61, and of this amount \$935,148.14 was the gross wage paid to prisoners. Approximately fifty-three miles of heavy construction has been completed.

The prisoners have saved \$127,594.78, with no additional cost to the Highway Commission.

Unfortunate dependents of these prisoners have received \$29,988.53 of the above.

Escapes and violations of camp rules have been materially reduced.

Time lost from work on account of sickness has been reduced to a minimum and feigning sickness entirely eliminated.

Construction costs and prisoner maintenance costs have been accurately segregated.

DEPARTMENT OF PRISON ROAD CAMPS

The State of California has been saved an average of \$500 per day in prison support, as the prisoners at the road camps are self-supporting.

The congested conditions in the prisons have been relieved and the hope of road camp assignment, which is the reward for good conduct, has been a great factor in maintaining prison discipline.

The parole system, the courts, and the general public have all benefited by the fact that of men who have fallen over the moral cliff, the prison road camps are making better citizens than any other system yet devised.

PLATE LXXXIV. State Highway near Newhall in Los Angeles County.

APPENDIX K

THE PURCHASING DEPARTMENT

By LOWELL R. SMITH, Purchasing Agent

That the biennium ending June 30, 1926, has covered a period of considerable activity by the Purchasing Department of the Commission is shown in the following report for the two years ending as of above date.

Total purchases in classified form are shown and cost of administration insofar as salaries and rental are concerned. Due to the fact that such expenses as telegraph, telephone, postage, and printing are charged to headquarters overhead it is impossible to show these charges in the cost of administration of the Purchasing Department:

1. Major equipment-----	\$750,000 00
2. Minor or non-rental equipment, repair parts, accessories, etc.-----	444,575 00
3. Gasoline, lubricating oils and greases-----	765,000 00
4. Asphalt, road and fuel oils-----	205,050 00
5. Groceries, produce, meats, flour, cereals, etc.-----	333,750 00
6. Rock, sand and gravel, quarry waste, etc.-----	304,725 00
7. Automobile and truck tires and tubes and mechanical rubber goods-----	252,350 00
8. Hardware, iron, wire and steel, and small tools-----	245,490 00
9. Lumber and building materials-----	174,525 00
10. Culverts, corrugated metal-----	164,985 00
11. Explosives-----	114,570 00
12. Office and shop furniture, fixtures, equipment and supplies-----	83,530 00
13. Cement-----	45,080 00
14. Clothing (convict labor)-----	41,200 00
15. Paints, oils, etc.-----	39,325 00
16. Engineering and laboratory equipment and supplies-----	30,050 00
17. Pipe and plumbing supplies-----	27,255 00
18. Calcium chloride-----	26,290 00
19. Wood and coal-----	24,250 00
20. Commissary and camp equipment-----	19,035 00
21. Culverts, concrete-----	16,065 00
22. Tobacco (convict labor)-----	10,010 00
23. Electrical supplies-----	7,865 00
24. Grain and feed-----	7,095 00
25. Highway signs, signals, crossing gates, etc.-----	5,890 00
26. Oxygen and acetylene welding supplies-----	5,125 00
27. Drugs-----	2,730 00
28. Leather goods-----	2,515 00
29. Miscellaneous-----	18,805 00
Total-----	\$4,167,135 00
Salaries of the Purchasing Department for the biennium-----	\$21,204 65
Office rental incurred by Purchasing Department for the biennium-----	1,503 84
Total salaries and rental-----	\$22,708 49
Percentage of cost of purchasing-----	0.545%

Purchases as listed above are those made by the Purchasing Department and do not include purchases made by the ten division offices in cases of emergency and authorization from the Purchasing Department. Such purchases are estimated at \$50,000 yearly for all divisions.

Purchases of major equipment cover a wide variety of machinery, consisting of passenger automobiles and light trucks; twelve gas shovels, one hundred twenty-eight McCormick-Deering and Fordson tractors, twelve 2-ton Caterpillar tractors, twenty-four 30-horsepower Caterpillar tractors, three 60-horsepower Caterpillar tractors, seventy-three one-man grader attachments, thirty one-man grader units, ninety 7- and 8-foot rubber-tired graders, eleven 7-foot steel-tired graders, and four 12-foot steel-tired graders; six rock crushers, eleven air compressor units, and twenty-seven asphalt heating kettles.

PLATE LXXXV. Maintenance Station near Lancaster, Division VII.

PLATE LXXXVI. Maintenance Station at Shellyville, Division IV.

Considerable saving was made in the purchase of major equipment by buying most of it in large quantities.

This is especially true covering the purchase of road graders, grader attachments and motive power therefor. Purchase of this equipment was made in two lots, the first early in the spring of 1925 for that year's work, and the second in January, 1926, to meet the present year's requirements.

The supplying of repair parts and accessories for this vast amount of equipment is a business in itself and this department, through experience gained in the purchase of these parts and accessories during the past several years, has been able to effect large savings by learning the cheapest sources of supply for such repair parts and accessories and by purchasing in large quantities.

In connection with the purchase of equipment and repair parts it might be well to state that during the past biennium the Commission has succeeded in being placed on the National Users' list of most of the manufacturers of automobiles and trucks and is enjoying the discounts allowed such users on new equipment as well as on repair parts therefor.

As will be noted from the foregoing tabulation, purchases of petroleum products is one of the major commodities from a dollars and cents standpoint. The buying of various products under this classification is all done on yearly contracts made by the Commission's Purchasing Department.

The present, or 1926, contract for gasoline has represented a saving to the Commission over market price on that product of eight cents per gallon south of the Tehachapi and six cents per gallon north thereof. Estimating the yearly requirements of this product by the Commission over the entire state to be one and three-quarter million gallons, a saving over market price is shown of approximately \$122,500. The net price per gallon on gasoline under the contract at some of the larger points of distribution throughout the state are as follows: Los Angeles 12½ cents per gallon, San Diego 13½ cents, Bakersfield 15 cents, Fresno 16½ cents, San Francisco 16 cents and Sacramento 16½ cents per gallon. These prices include the 2-cent state tax on gasoline.

The Commission buys only first grade western asphaltic base lubricating oil, the basic contract price of which is 29 cents per gallon at the refinery.

The contract price for asphaltum is \$12 per net ton at refinery; fuel oil \$1.04 per barrel at northern refineries, 90 cents per barrel in the Kern fields and \$1 per barrel at southern refineries.

Practically all purchases represented in the foregoing tabulation were made on competitive bids, exceptions from this practice only being made in emergency cases or in the buying of commodities where competition could not be obtained, as for instance the purchase of certain repair parts for equipment, etc.

To handle this large volume of purchases necessitated the issuance of slightly more than forty thousand purchase orders during the biennium.

The Purchasing Department has at all times made every effort to expedite purchases consistent with good buying so as to reduce as much as possible any excuse for emergency purchases from retail stocks by field men, and to avoid to the greatest possible extent, delays to work on account of failure to receive purchased materials in time.

The department has cooperated in every way possible with the division offices and heads of the various departments and in turn has had the cooperation of these offices all of which has been reflected in intelligent and economical buying.

APPENDIX L

ACCOUNTING DEPARTMENT AND FINANCIAL STATEMENTS

By H. B. WEAVER, Chief Accountant, and C. E. MALM, Consulting Accountant.

During the past biennium, a number of important changes have been made in the accounting procedure of the California Highway Commission.

SURVEY OF ACCOUNTING SYSTEM

On July 14, 1924, upon the request of the State Highway Engineer, the State Board of Control directed the State Accounting Department to conduct a survey of the accounting system then in use by the commission. A report by the State Accounting Department was made on September 8, 1924, describing the system then in use. Certain weaknesses of the system were pointed out, tending to show that the system as then operated was inadequate to meet the accounting needs of the commission. The report recommended that a further study of the accounting requirements of the commission be made with a view to the betterment of such parts of the accounting system as were found to be necessary to gain adequate accounting control over all activities.

SYSTEM OF ACCOUNTING RECOMMENDED

Upon the request of the State Highway Engineer, an accountant from the State Accounting Department was temporarily assigned to the California Highway Commission for the purpose of making a study of the accounting requirements of the commission and to furnish a report and an outline of a method of accounting procedure to meet such needs. This study was begun on December 2, 1924, and carried on continuously until June 1, 1925, when a report was rendered and an outline of accounting procedure was presented by the accountant. The study was considered very thorough, encompassing as it did a study of the accounting systems of various highway departments of other states, the budget system of the United States Government, the accounting systems of various commercial, financial and manufacturing concerns, also public utility corporations, located in the various cities of both northern and southern California. This study also included the investigation of the various mechanical aids available for use in the handling of accounting detail.

The system outlined and recommended had the following salient features:

Decentralization of the detail accounting from the central office of the commission to each division and shop office;

Control by the central office over all division and shop offices by a system of control accounts only, dependence to be placed upon a system of monthly reports from division and shop offices for analysis of cost accounts and results of operations, thus eliminating the handling of detail accounting for control and cost purposes in the central office;

Separation of accounting work of shop offices from the division offices;

Accumulation of detail and arrangement of the accumulation in such manner that the control accounts of the branch offices would automatically be in reconciliation with the central office control accounts;

Diffusion of accounting information by a system of daily accumulations and monthly reports, so that all administrative officers would at all times be in possession of pertinent cost and financial facts;

A method of material control in the shop stores by which a daily statement of receipts and disbursements would be furnished, and through a system of perpetual inventory, the quantity and value of stores on hand at all times would be known;

A property and equipment accounting system which would account for each individual piece of land, each building or group of buildings and each unit of major equipment;

A method of amortizing the cost value of the buildings and equipment by charging the proper cost accounts at stated periods, a proportionate amount calculated to equal the book or cost value at the time of the retirement of the property and equipment, and the creation of a reserve account, to which account would be credited at the time the various cost accounts were charged, the calculated accrued depreciation, in order that all highway construction projects and maintenance work would bear their proportionate share of plant investment during the life of the facilities, and not leave on the books of account great amounts of unallocated plant expenditures after the property and equipment had been worn out and retired from useful service;

Appraisal of all materials and supplies in all stores, automotive and construction equipment, land and buildings, and the appraised values placed on the books of account;

Allocation of all overhead charges to highway construction projects and maintenance work, so that the books of account would show truly the cost of highways constructed and the cost of highway maintenance.

INSTALLATION OF SYSTEM

After the outline of the accounting system had been submitted, it was decided to test the system and also to demonstrate the feasibility of the application of bookkeeping machines to detail bookkeeping work such as would be required to carry out the work required by the proposed system. It was decided to test the machines first on storekeeping records, payroll distribution and cost accounting work in the headquarters shops at Sacramento. This test was carried on over a period of time from June 15, 1925, to September 10, 1925. The result of the test was thought to be sufficiently satisfactory to warrant the installation of the bookkeeping machines as a part of the proposed accounting system in the equipment department offices. Accordingly, bookkeeping machines were installed in all of the shop offices of the equipment department with the exception of shops Nos. 3 and 10, where only a hand system is used, due to the fact that these two divisions of the equipment department do no shop work.

The installation of the system required the taking and pricing of physical inventories of materials and equipment and the adjustment of

PLATE LXXXVIII. State Highway in San Diego County near Pine Valley.

PLATE LXXXIX. Riprap embankment protection along Coast Highway,
San Diego County.

the control books to bring the book accounts into agreement with the physical inventory. The equipment department installations were completed on February 1, 1926. The installation of the property and equipment accounting system has been designed to become effective on July 1, 1926. A detailed description of this system of accounting is contained in Appendix H.

The practical results obtained thus far from the decentralization of the accounting detail and the installation of the system are summarized in the following statements:

The work of scheduling invoices covering purchases of materials and supplies, as well as the distribution of the charges to the cost accounts, is now being performed in the division shop offices, thus insuring a more nearly accurate distribution of charges to cost accounts, and incidentally a more rapid payment of vendors' invoices for services rendered.

Through the use of the perpetual inventory system, there is produced an accurate accounting day by day of the receipts and disbursements of stores, and continuous statements of quantity and value of each kind of material and total value of all storehouse materials and supplies on hand at any time.

An accurate distribution of pay rolls to cost accounts is secured and incidentally, production of records showing total pay roll earnings day by day and for any period during the month, daily charges of labor to cost accounts, and total charges to each cost account and to all cost accounts for any period during the month. As an incident to pay roll work, pay roll checks are written, protected, recorded in the cash book, added and proved against the pay roll all in one operation.

Accurate distribution of materials and supplies to cost accounts is accomplished and incidentally, production of records showing itemized and total charges for materials and supplies to each cost account for each day, and total charges to each cost account for any period during the month, thus insuring that all day by day disbursements of materials and supplies have been properly accounted for.

A statement is produced at the end of each month showing total charges to each shop job order worked on during the month, analyzed to show charges for labor, materials and supplies, store expenses and overhead charges on direct labor, and the distribution of the job order charges to the proper cost accounts. When totaled, this statement shows total labor and materials consumed during the month. As the total of materials consumed during the month must be in agreement with the total disbursements of stores during the month, and the total labor expended must be in agreement with the total of the pay rolls for the month, the statement furnishes proof that expenditures for all labor and materials have been properly accounted for, and in addition furnishes accumulated distribution of charges to cost accounts, which totals form the basis of a journal entry on the control books, giving expression in the books of account to the results of the month's shop and stores transactions.

By keeping the property and equipment ledgers, accounting control is gained over each piece of land, each building or group of buildings and over each unit of major equipment, thus insuring that the value of the physical inventory is in agreement with the control ledger accounts representing investment in property and equipment.

PLATE XC. Reconstructed State Highway near Carpinteria in Santa Barbara County.

PLATE XCI. Traffic on State Highway Near Santa Monica, in Los Angeles County.

By making up in the branch offices of schedule registers, showing distribution of charges to control ledger accounts, the control ledger accounts in the central office and the branch offices are kept in automatic agreement by the simple method of the branch offices sending to the central office the original copies of the schedule registers for audit and entry on the control books. By the same procedure, the same result is obtained in the case of journal entries recorded on the branch offices' transfer journals.

By the production at the end of each month, by the branch offices, of a trial balance of the branch office control ledger, and a statement of operations, the central office has a check on the branch office control accounts against the central office control accounts. From the statement of operations, an analysis is produced of stores accounts, showing value of physical inventory of stores on hand, analysis of the stores expenses for the current month and total for the period of the fiscal year to the date of the report; value of the work performed in the shop during the month and the total for the period of the fiscal year to the date of the report; analysis of the shop overhead expenses for the month and the total for the period of the fiscal year to the date of the report; analysis of the cost of equipment administration, and the total cost of equipment repairs. When these reports are consolidated at the end of the month by the equipment engineer, with the addition of stating the total of equipment rentals billed and the depreciation accruals for the period of the fiscal year to the date of the report, a complete general statement showing the results of the operation of the equipment department is on hand, to act as a guide to the administrative officers of the Commission, by showing the general financial trend of the equipment department as a whole and also by districts or divisions.

Upon the completion of the installation of the accounting system for the equipment department, a test was made to determine the adaptability of the proposed accounting system, together with bookkeeping machines, to the accounting problems of the division engineers' offices. The result of the test, which was carried on at Division III over a period of time from February 8, 1926, to April 9, 1926, was considered sufficiently satisfactory to warrant the installation of the system and the bookkeeping machines in all of the division offices. The system of accounting for the division engineers' offices had for its recommendation the following features:

The keeping of a set of control ledger accounts in the division office, which accounts would at all times be in automatic agreement with the control ledger accounts in the central office at Sacramento;

The accumulation of account detail in the division office in such manner that no further handling of detail would be necessary to gain accounting control through the control books in the central office, dependence to be placed on a system of monthly and quarterly reports to analyze cost accounts;

Diffusion of accounting data so that all administrative officers would be in possession of pertinent cost and financial facts at all times, especially in the division engineers' offices.

In order that the accounting data produced by the division engineers' offices might be uniform for the fiscal years, it was necessary that the installation of the system be made simultaneously in all of the division offices. July 1, 1926, was chosen as the date on which to make the new

system effective. This method of installation required that each division office personnel be fully instructed in the use of the new system prior to its installation. This preliminary work was carried on during the months of May and June, 1926.

PURCHASES

All purchases, with the exception of materials required in cases of emergency, are made by the Commission's central office purchasing department. Purchases are made upon the signed request or requisitions of division engineers and other department heads, and in conformity with the state law requiring bids on goods to be purchased. All goods received are receipted for by the proper custodian on a receiving record, which record later becomes the authority for approving vendors' invoices for payment. Goods must be received by the department ordering same before payment will be made. The invoice approved by the department heads must show the purchase order number, receiving record number and the account to be charged. Before invoices are finally approved for payment, they are sent to the purchasing agent to see that the goods have been billed to the Commission in accordance with the terms of the purchase order.

PAYMENT OF CLAIMS

All claims against the Commission, including vendors' invoices, pay rolls, contractors' estimates, and expense accounts, are accumulated by the divisions incurring the indebtedness and presented for payment on claim schedules. This document shows the names and addresses of the creditors, the amount to be paid to each creditor, and the fund or budget item from which the claims are to be paid. This schedule is supported by the original claim documents of the claimants.

The claim schedules are prepared in the division and shop offices, except for a small number required to cover central office transactions. With the aid of the bookkeeping machine, the claim schedule proper is prepared in triplicate and at the same time a master or distribution sheet is prepared in duplicate. The claim schedule proper shows the names of the claimants and the amount due each, while the master sheet shows, in addition to this information, distribution of charges to control ledger accounts. The reverse side of the master sheet shows cost accounting data.

The original claim schedule and one copy of the master sheet, together with the original and duplicate copies of the claimants' documents, are sent to the central office for audit by the accounting department, approval by the State Highway Engineer and audit committee of the Commission, after which it is forwarded to the State Board of Control and the State Controller, who issues warrant to the California Highway Commission for the total of the schedule. The second copy of the master sheet and the triplicate copies of the claimants' documents are retained in the division offices for accounting purposes.

Before transmitting the original claim schedules to the central office, the branch office records the schedules in a schedule register. This schedule register is prepared in duplicate and shows the schedule number, fund and budget item from which the amount of the schedule is drawn, amount of schedule, and distribution of charges to the control

ledger accounts. At the end of the month this register is totaled, which totals become the basis of a journal entry on the branch office books, recording the month's transactions. The original of this register is forwarded to the central office where it is checked against the register of schedules audited by the central office to see that all schedules have been accounted for by the branch offices.

After the warrant covering schedule of claims has been received from the State Controller by the secretary and disbursing officer of the Commission and by him deposited in the bank, checks are immediately written by the accounting department and delivered to the secretary of the Commission for signature and mailing to the proper claimants. The form of check used has been designed to be written on a book-keeping machine equipped with indenting type. By the use of this form of check, the check is written, recorded in the cash book, and the cash book added, all in one operation. By the use of the transparent envelope and having the name and address of the payee written on the check, no further writing is necessary when mailing the check. The checks are printed in groups of five and are signed five at a time on a signagraph. With but few exceptions, checks are written and mailed on the same day that the warrant is received from the State Controller.

The expenditures of the Commission may be classified under four headings as follows: Contract payments, salaries and wages, traveling and incidental expenses of employees and purchase of material, equipment and supplies.

These classes of expenditures are handled in the following manner:

Contract Payments. Contract payments are based on estimates made by the resident engineer on the job. These estimates are prepared monthly by the division engineer in whose division the work is located, except in the case of bridges, the estimates for which are prepared by the bridge engineer. When these estimates have been prepared and checked they are combined in claim schedules, which schedules are handled in the manner outlined above.

Salaries and Wages. Pay rolls are prepared monthly in the central office and in each division office for staff employees, and semi-monthly in each division office for laborers and other employees on day labor work. These pay rolls are combined in schedules which are passed for payment. The employees on the semi-monthly pay rolls are paid three days after the expiration of the period, from a revolving fund in charge of the division office. The staff pay roll employees are paid the first of the following month from a revolving fund carried in the central office.

Traveling Expenses. Under this heading are included traveling expenses of employees and small contingent items, the accounts for which are prepared by the employees who incur the expenses, and from time to time these accounts are assembled in schedules which take the regular course. In some cases, to avoid inconvenience or unnecessary hardship on the employee, advance payment is made from the revolving fund.

So far as possible, all purchases are made through the central office purchasing department, the authority of the division engineers to make purchases being confined to emergency transactions, which are neces-

PLATE XCIII. Slide on State Highway in Del Norte County.

sary to avoid delay to the work, and to commodities which can be obtained locally to better advantage.

PREVIOUS CHANGES

Several changes made in the accounting procedure in the previous biennium are working out in a very satisfactory manner.

The method of handling the convict accounts has been perfected and the Department of Prison Road Camps is now in a position to know the exact standing of each convict as well as the exact standing of each camp within a short time after the end of the month.

The system of handling equipment on a rental basis, as explained by Mr. R. H. Stalnaker, Equipment Engineer, on page 107 of the Biennial Report of 1924, is working out in excellent shape. The rental system was set up to provide a means for properly prorating to the work, the cost of repairs and upkeep on equipment and depreciation thereon.

CENTRAL OFFICE AND BRANCH OFFICE BOOKKEEPING

The accounting procedure now in effect requires that each branch office shall account for all expenditures incurred under its jurisdiction. It is necessary that the branch offices keep general or control ledger accounts and that these accounts are at all times in agreement with the central office accounts. In addition to the control ledger, it is necessary that the branch offices keep subsidiary ledgers in which to analyze the various cost elements, and from which to gain the necessary information to report the results of the operations at the end of each month. The sources of entries to the control ledger are the schedule register and the transfer journal. The transfer journal has been designed to record and accumulate all transactions not of a cash nature, such as transfer of materials and labor from one class of work to another or for value transferred from one office to another, etc.

For the purpose of cost accounting, expenditures for highway construction and highway maintenance, are classified under the following general control accounts: highway construction, highway improvements, highway maintenance, central office administration and division office administration. For the purpose of analysis of cost, each classification is divided into functions, and each function analyzed according to object of expenditure. Expenditures for the construction of highways are analyzed by county, route and section under the following functional classifications: preliminary surveys and plans, right of way, construction engineering, highway construction—contracts, and highway construction—day labor. Each project classified under the foregoing functional classifications has its charges classified into the following four objects of expenditures; materials and supplies, service and expenses, salaries and wages and equipment rental.

Expenditures covering the maintenance of highways are analyzed by county, route and section, and these expenditures are segregated into the following functional classifications: traveled way, roadside, improved shoulders, structures, drifts, safety devices, trees and miscellaneous. Expenditures for each functional classification are analyzed into four objects of expenditures the same as for highway construction.

Expenditures for administration are analyzed as to function and object of expenditures.

In the division offices subsidiary ledgers analyzing highway construction and highway improvements, the ledger page for each county, route and section is posted by the bookkeeping machine in duplicate, the original of which is sent to the central office at the end of each month for file in the construction ledger. A report is prepared in the division offices monthly, showing expenditures on each project by county, route and section. This report shows total expenditures on each project for the month, total previous expenditures and total expenditures to date of the report.

Expenditures for the maintenance of highways are analyzed in the division subsidiary ledger and posted on machine ledger cards according to function and object of expenditure. Once in three months, a report of maintenance expenditures is prepared. This report shows total expenditures by functions and object for each section, the total expenditure for each section and total for all sections in the division from the beginning of the fiscal year to the date of the report. The report covering expenditures for maintenance is divided into the following three sections: General Maintenance, General Maintenance Betterments, and General Maintenance Overhead.

Expenditures for administration are analyzed in the subsidiary ledger of the division office, also in central office for central office administration and posted on machine ledger cards, according to function and object of expenditures. At the end of each month a report is prepared showing total expenditures by functions and objects, from the beginning of the fiscal year to the date of the report. When these reports are received at the central office accounting department they are consolidated into one report for the benefit of the administrative officers.

COMPLEXITY OF ACCOUNTING PROBLEM

On July 1, 1925, the finances of the Commission were placed under the legislative or state budget system for the first time.

The appropriations made by the budget for the use of the Commission were as follows: New construction, reconstruction, widening and thickening, maintenance and repairs, overhead salaries, overhead support.

The item of new construction was intended to cover federal aid money which was being deposited in the bond funds. The items of reconstruction, widening and thickening, and maintenance and repairs were intended to cover work payable from the State Highway Maintenance Fund, which includes motor vehicle license fees and gasoline tax money, and the items of salaries and support were intended to be payable, partly from the bond moneys and partly from the State Highway Maintenance Fund.

The State Controller ruled that the bond funds were not subject to budget. He also ruled that, as salaries and support were intended to cover overhead charges payable from the bond money as well as from the State Highway Maintenance Fund, claim schedules against the Second and Third State Highway Funds covering salaries and support could be deducted from the appropriations for salaries and support. Other claim schedules against the bond funds have been drawn without reference to the appropriations.

The necessity of preparing and presenting claims to the Controller in such manner as to conform to the budget and fund requirements, has resulted in the number of claim schedules required being more than doubled. Due to the fact that the equipment department operates on a rental basis, that is, that the expense of keeping the equipment in repair and the cost of administering the department must be recouped by assessing against all highway construction projects and maintenance work, rental for equipment actually in use on this work, and in addition the work of servicing of automobiles for other state departments, causes a constant flow of money between all of the funds and budget items.

The various classes of revenues with which the highway activities have been financed and the consequent necessity of segregating not only the claim schedules according to fund and budget items, but also the necessity of accounting for expenditures separately according to the various forms of financing, has created a very complex accounting problem. This fact is forcibly realized when attempting to make use of the accounting system as an aid in the efficient and economical administration of a department whose activities are as diverse as those of the California Highway Commission. It is highly important that the accounts be accurate and that accounting information be accumulated in such manner that the results of the various operations of the Commission may be expressed in comprehensive accounting data not only for the Commission as a whole, but in detail. This information must be gained with sufficient rapidity to indicate trends in current transaction affecting the various activities. A uniform and simple plan of financing and of budgetary control would, in a great measure, tend to relieve the accounting system of many of its complexities, besides be an aid in gaining effectual and economical accounting control.

STATEMENTS

Included in this appendix is the "Statement of Condition" of June 30, 1926 a statement showing the expenditures in the different counties from the First, Second and Third State Highway Funds, a consolidated statement showing all expenditures made by this Commission since 1912, and another consolidated statement classifying the expenditures under several heads and showing the percentage spent under each classification.

PLATE XCVI. Federal Aid Project along the Truckee River, in Nevada County.

APPENDIX M

FEDERAL AID HIGHWAYS IN CALIFORNIA

By L. V. CAMPBELL, Office Engineer

THE DOWELL BILL

The continuation of federal aid to the states in highway construction was assured for an additional two-year period when the Dowell bill, authorizing appropriations for each of the two fiscal years ending June 30, 1928, and 1929, respectively, was passed by congress, and approved by the President. The bill provided \$75,000,000 a year for federal aid highways and \$7,500,000 a year for national forest highways and was passed to carry out the provisions of the federal highways act, approved November 9, 1921, providing for a connected system of federal aid highways.

In the hearings on the Dowell bill before congress, there was a widespread and practically universal demand for the continuation of federal aid. Civic, business and labor organizations, as well as state and government officials, from all over the country, united in support of the bill. Only three or four of the wealthy eastern states opposed the policy of federal aid, but their opposition was soon counteracted by the overwhelming sentiment in favor of it.

The Dowell bill carried no appropriation, it being in effect a pledge to the states by the federal government to appropriate the funds when needed. Owing to the lag of expenditures behind allotments, it is necessary to appropriate only sufficient money to meet payments as they became due. Allotments to the states for any one fiscal year are available for expenditure during the two succeeding fiscal years. Also, the term "expenditure" has been interpreted by the Secretary of Agriculture to mean "contracted for between the state and the federal government." Furthermore, federal aid agreements or "project agreements" are entered into before construction is started; however, federal aid payments are not made in advance, but progressively as the work is accomplished, and while all the federal aid available might be covered by project agreement, it would probably not all be collected until some time later. The above conditions all tend to increase the lag of cash disbursements of federal aid behind allotments.

The following table as of June 30, 1926, illustrates the lag above mentioned:

Total federal aid allotted to California.....	\$19,588,109
Federal aid under agreement.....	18,670,045
Federal aid collected.....	16,120,155

It is very desirable from the viewpoint of the states that federal commitments be made in advance of the time they are to become effective, so as to permit the states to plan their improvement programs from one year to another with assurance that federal funds will be available to aid in the construction. Some of the western states in particular have been largely dependent on federal aid to finance high-

way construction, and without this aid, the improvement programs in these states would be greatly restricted, if not entirely suspended. California has depended almost exclusively upon federal aid, augmented by local contributions, to continue the extension of improvements on the state highway system during the past biennium. Federal aid has been earned principally by the widening and thickening of state highways with reconstruction funds, and the money thus obtained applied to the construction of new highways.

IMPROVEMENTS WITH FEDERAL AID

Federal aid allotments to California during the past biennium amounted to \$4,959,793.78. Collections for the same period amounted to \$6,658,778.81. The neglect of California in the past, to use each year all of the federal aid allotted to it for that year, has resulted in an accumulation of federal aid to its credit. Thus it has been possible during the past four years to collect federal aid in excess of the amounts allotted for those years.

During the past biennium, project agreements were entered into with the Secretary of Agriculture for the construction or reconstruction of 390 miles of the federal aid highway system at a total estimated cost of \$11,296,775, the federal aid amounting to \$5,797,237. In addition to the above, contracts were awarded and day labor work was authorized to the extent of about \$4,992,000 for the improvement of state highways not included in the federal aid highway system and therefore ineligible to receive federal aid. On account of this additional work the federal aid placed under agreement amounts to about 35 per cent of the total construction obligations. The federal aid construction consisted of 95 miles of Portland cement concrete paving at a total estimated cost of \$3,022,914, with \$1,604,753 federal aid; 6.5 miles of asphalt concrete pavement at a total estimated cost of \$340,017, with \$116,197 federal aid; 56 miles of asphalt concrete surface over previously constructed pavement, including the widening of the old pavement with asphalt or concrete at a total estimated cost of \$1,480,449, with \$828,144 federal aid; 167 miles of grading and rock surfacing at a total estimated cost of \$3,678,525, with \$1,623,365 federal aid; 65 miles of pavement widening with Portland cement concrete at a total estimated cost of \$643,095, with \$393,116 federal aid; 54 bridges at a total estimated cost of \$2,131,775, with \$1,231,662 federal aid.

A balance statement of federal aid is shown below. A record of federal aid projects showing total costs, federal aid allotted, and amount collected, is included at the end of this appendix.

BALANCE STATEMENT FEDERAL AID, JUNE 30, 1926

Total federal aid apportioned to California to June 30, 1927-----	\$22,072,815 00
Federal aid under agreement-----	\$18,085,093 51
Plans, specifications and estimates recommended for agreement by District Engineer U. S. B. P. R.-----	377,984 03
Estimates submitted to Bureau of Public Roads for agreement-----	857,716 82
Contracts pending award or advertised (estimated)-----	186,200 00
Total liabilities-----	19,506,994 36
Balance available for allotment to specific projects June 30, 1926-----	\$2,565,820 64
Allotment for 1928 and 1929 (estimated)-----	4,969,412 00
Total -----	\$7,535,232 64

FEDERAL AID ALLOTMENTS.**\$75,000,000 FUND.**

Fiscal year ending June 30, 1917-----	\$151,063 92
Fiscal year ending June 30, 1918-----	302,127 84
Fiscal year ending June 30, 1919-----	456,167 23
Fiscal year ending June 30, 1920-----	609,699 32
Fiscal year ending June 30, 1921-----	763,668 88
Subtotal -----	\$2,282,727 19

\$200,000,000 FUND.

Fiscal year ending June 30, 1919-----	\$1,524,248 30
Fiscal year ending June 30, 1920-----	2,286,372 45
Fiscal year ending June 30, 1921-----	2,291,006 63
Subtotal -----	6,101,627 38

\$75,000,000 FUND.

Fiscal year ending June 30, 1922-----	2,462,098 53
Subtotal -----	2,462,098 53

\$190,000,000 FUND

Fiscal year ending June 30, 1923-----	\$1,641,399 02
Fiscal year ending June 30, 1924-----	2,140,463 10
Fiscal year ending June 30, 1925-----	2,487,157 78
Subtotal -----	6,269,019 90

\$150,000,000 FUND.

Fiscal year ending June 30, 1926-----	\$2,472,636 00
Fiscal year ending June 30, 1927-----	2,484,706 00
Subtotal -----	4,957,342 00
Total to June 30, 1927-----	\$22,072,815 00

\$150,000,000 FUND.

Fiscal year ending June 30, 1928 (estimated)-----	\$2,484,706 00
Fiscal year ending June 30, 1929 (estimated)-----	2,484,706 00
Subtotal -----	4,969,412 00
Total -----	\$27,042,227 00

FEDERAL COOPERATION

The State and the U. S. Bureau of Public Roads are in accord concerning the high standards of alignment, grades, and construction adopted for federal aid roads. This is evidenced by the few criticisms, received from the U. S. Bureau of Public Roads, of the plans submitted by the state. The harmony existing between the state and the federal bureau is encouraged by the cooperation extended by them in the preliminary stages of a project. They make a practice of studying the location on the ground in conjunction with the states' engineers while the survey is in progress, and later of reviewing the plans while in process of preparation. By this cooperation the state has the benefit of the ideas of the federal engineers, and the opportunity to incorporate their suggestions in the plans.

THE STAGE PLAN

The stage plan of construction, whereby a road is graded, and a temporary surfacing placed to carry traffic for a few years until the fills have settled, or funds have become available for paving, has been recognized by the Bureau of Public Roads as a sound policy from both an engineering and economic viewpoint. Several federal aid projects have been constructed on this plan in the Imperial Valley, where the paving was omitted for purely economic reasons.

NOTABLE FEDERAL AID PROJECTS

Probably the most spectacular undertaking of the highway commission during the past biennium was the paving across the sand dunes, a distance of about six miles in Imperial County, federal aid project No. 131-C. An asphalt concrete pavement, twenty feet wide and six inches thick, increasing to a thickness of nine inches at the edges, was placed on a grade thirty feet wide. The dunes of shifting sand have been a menace to traffic and a barrier between the Imperial Valley and the east, and for the preceding ten years had been crossed by a narrow plank road eight feet wide. Before the specifications were drawn for the paving, the project was studied by engineers of the state and the federal government, and it was upon the suggestion of the latter that a well was drilled in the open valley, a small area free from sand at about the middle of the dunes. The success of the well, which produced a flow of 500 gallons per minute, assured a plentiful water supply and was a contributing factor to the decision to place a permanent pavement across the sand dunes. A more complete description of this project will be found in Appendix E.

Another notable federal aid project was the construction of 1.2 miles of concrete seawall along the coast in Ventura County, federal aid project No. 130-A. The rugged country along the coast and a railroad which occupies the most desirable location, forced the highway to the very edge of the shore. The seawall, rising about twenty feet above the beach, was designed to protect an embankment forty feet wide on top, and replaced the rapidly deteriorating timber causeways built by popular subscription in 1912. The seawall and fill cost \$411,000, and the federal aid amounted to \$240,000.

FEDERAL AID SYSTEM

The federal aid highway system for California, as approved by the Secretary of Agriculture in December, 1922, has been slightly modified during the past biennium. The Silver Lake cutoff from Daggett to the Nevada state line near Jean was substituted as a federal aid route in place of the road from near Goffs to the Nevada state line near Searchlight. Also, the road from Crescent City along the coast to the Oregon line near Cheteo was changed to a primary route from a secondary route, and the road from Crescent City to the Oregon line near Monumental was changed to a secondary route from a primary route. The total length of the seven per cent federal aid highway system in California is 4,541 miles of which 1981 miles are included in the primary or three per cent system. A map showing the federal aid highway system is inserted herewith.

UNITED STATES HIGHWAYS

The 1924 convention of the American Association of State Highway Officials adopted a resolution requesting the Secretary of Agriculture, in cooperation with the several states, to select and designate a comprehensive system of through interstate routes, and to devise a uniform scheme for designating such routes. Accordingly, on March 2, 1925, the secretary appointed a joint board on interstate highways, composed of three members of the U. S. Bureau of Public Roads and twenty-one members of state highway departments, a total of twenty-four members. Included on the board was Mr. R. M. Morton, State Highway Engineer of California.

In the past, numerous organizations or trail associations had promoted routes, some of them transcontinental in scope, and in some instances had undertaken the marking of the route. These trails were named after some person of prominence, for some place of interest or note, or for memorial or sentimental reasons. Frequently, the routes overlapped, or a trail would branch and follow two or more routes, resulting in confusion to the tourist. It was for the purpose of coordinating the designation of interstate routes, so as to avoid overlapping and duplication, and to promote a comprehensive and uniform system of marking these routes, that the joint board was created.

A tentative system of routes was first selected at regional meetings of the joint board members of each region. This tentative system was then referred to a full meeting of the joint board, where it was adjusted and revised. Maps of the system were then submitted to the respective states for confirmation or minor alterations or corrections. The confirmations by the several states of the routes adopted by the board were considered final. So far as possible the routes selected adhered to the federal aid highway systems previously approved by the Secretary of Agriculture.

The report of the joint board recommended that the system of trans-continental and interstate routes selected be known as "United States Highways," and further recommended a system of route numbers and a system of marking, directional, and warning signs.

Following is a list of federal aid routes in California approved for marking as United States highways, and inserted herewith is a map showing the routes selected and the respective U. S. route number:

UNITED STATES HIGHWAY ROUTES IN CALIFORNIA

<i>U. S. Route Number</i>	<i>State Highway Route Number</i>	<i>Termini</i>	<i>Miles</i>
40	14	Albany to Martinez-----	24.2

APPENDIX R
AVERAGE CONTRACT PRICES
1912 to June 30, 1926

AVERAGE CONTRACT PRICES, ¹1912-1916 (INCLUSIVE).

Year	1Grading (per cu. yd.)	Asphaltic concrete including all materials (per ton)	Portland Cement Concrete Pavement				
			Concrete including all materials (per cu. yd.)	Sand delivered (per ton)	Broken stone and gravel delivered (per ton)	Cement delivered (per bbl.)	2Concrete exclusive of materials (per cu. yd.)
1912.....	\$0 39	\$6 04	\$5 82	4	4	\$1 61	4
1913.....	46	6 46	5 91	\$0 56	\$0 58	1 65	\$2 56
1914.....	51	6 71	6 75	54	85	1 70	3 03
1915.....	45	6 80	6 26	58	76	1 74	2 84
1916.....	37	-----	6 37	60	76	1 80	2 90
5Average.....	\$0 49	\$6 49	\$6 35	\$0 56	\$0 78	\$1 70	\$2 92

AVERAGE CONTRACT PRICES, ¹1917 AND 1918.

Year	¹ Grading (per cu. yd.)	Asphaltic concrete including all materials (per ton)	Portland Cement Concrete Pavement				
			Concrete including all materials (per cu. yd.)	Sand delivered (per ton)	Broken stone and gravel delivered (per ton)	Cement delivered (per bbl.)	² Concrete exclusive of materials (per cu. yd.)
1917.....	\$0 73	\$8 52	\$8 03	\$0 66	\$0 86	\$1 80	\$4 17
1918.....	78	-----	\$10 51	1 05	1 28	2 20	5 53
⁵ Average.....	\$0 74	\$8 52	\$8 67	\$0 76	\$0 96	\$1 90	\$4 51

AVERAGE CONTRACT PRICES, ¹1919 AND 1920 (TO JUNE 30, 1920).

Year	1Grading (per cu. yd.)	Asphaltic concrete including all materials (per ton)	Portland Cement Concrete Pavement				
			Concrete including all materials (per cu. yd.)	Sand delivered (per ton)	Broken stone and gravel delivered (per ton)	Cement delivered (per bbl.)	2Concrete exclusive of materials (per cu. yd.)
1919	\$0 96	\$9 07	\$13 08	\$1 10	\$1 33	\$2 64	\$6 37
21920	1 10		16 25	1 23	1 41	2 68	7 64
5Average	\$1 01	\$9 07	\$14 82	\$1 17	\$1 37	\$2 66	\$7 00

AVERAGE CONTRACT PRICES, ¹1921 AND 1922.

(Costs are from June 30, 1920, to June 30, 1921, and June 30, 1921, to June 30, 1922.)

Year	¹ Grading (per cu. yd.)	Asphaltic concrete including all materials (per ton)	Concrete including all materials (per cu. yd.)	Sand delivered (per ton)	Broken stone and gravel delivered (per ton)	Cement delivered (per bbl.)	² Concrete exclusive of materials (per cu. yd.)
1921.....	\$0 94	\$9 40	\$17 34	\$1 74	\$2 09	\$3 39	\$7 97½
1922.....	71	7 92	14 29	1 47	1 77	3 10	5 01
³ Average.....	\$0 78	\$7 98	\$15 75	\$1 63	\$1 94	\$3 23	\$6 96

AVERAGE CONTRACT PRICES, ¹1923 AND 1924.

(Costs are from June 30, 1922, to June 30, 1923, and from June 30, 1923, to June 30, 1924.)

Year	¹ Grading (per cu. yd.)	Asphaltic concrete including all materials (per ton)	Concrete including all materials (per cu. yd.)	Sand delivered (per ton)	Broken stone and gravel delivered (per ton)	Cement delivered (per bbl.)	² Concrete exclusive of materials (per cu. yd.)
1923.....	\$0 74	\$8 10	\$13 18	\$1 31	\$1 80	\$2 96	\$5 16
1924.....	75	7 27	13 49				
Average.....	\$0 74	\$7 75	\$13 40	\$1 31	\$1 80	\$2 96	\$5 16

AVERAGE CONTRACT PRICES, ¹1925 AND 1926.

(Costs are from June 30, 1924, to June 30, 1925, and from June 30, 1925, to June 30, 1926.)

Year	¹ Grading (per cu. yd.)	Asphaltic concrete, including all materials (per ton)	Portland cement concrete pavement including all materials (per cu. yd.)
1925.....	\$0 59	\$6 43	⁷ \$10 85
1926.....	0 44	5 13	710 58
⁵ Average.....	\$0 53	\$5 80	\$10 73

¹ Includes all classifications, except that structure excavation and preparation of subgrade are not included in the averages for 1924 to 1926. These items were bid on separately from the grading.

² Contractors bid upon this item in most cases prior to June 30, 1923, the state supplying all materials.

³ Only a six-months period, January 1, 1920, to June 30, 1920.

⁴ In 1912 contractors in all cases except one furnished concrete aggregates.

⁵ Weighted average.

⁶ In 1917 and 1918 the paying concrete was enriched from 1:2½:5 mixture to 1:2:4. In the prices stated allowance has been made for this change.

⁷ From June 30, 1923, to June 30, 1926, all materials were furnished by the contractors.

THIRD BIENNIAL REPORT

OF THE

Department of Institutions

OF THE

STATE OF CALIFORNIA

Two Years Ending June 30, 1926

CALIFORNIA STATE PRINTING OFFICE
JOHN E. KING, State Printer
SACRAMENTO, 1926

DEPARTMENT OF INSTITUTIONS

OF THE

STATE OF CALIFORNIA

EXECUTIVE OFFICE

Forum Building, Sacramento, California.

VACANT	Director
E. G. TWOGOOD	Secretary and Acting Director
CHAS. F. WAYMIRE	Deportation Agent
CARL E. APPEGATE	Chief Clerk
DR. D. C. WILLIAMS	Supervisor Private Institutions
RUTH M. MORSE	Stenographer
J. ESTELLE WADE	Stenographer
PEARL M. HAYS	Typist

INDUSTRIAL HOME FOR THE ADULT BLIND

Oakland, California.

DOUGLAS KEITH	Superintendent
M. L. GILCHRIST	Secretary

INDUSTRIAL FARM FOR WOMEN

Sonoma, California.
(Closed)

CORRECTIONAL SCHOOLS.

VENTURA SCHOOL FOR GIRLS

Ventura, California.

DR. OLIVE P. WALTON	Superintendent
MISS F. STELLA MCCUSKEY	Secretary

WHITTIER STATE SCHOOL

Whittier, California.

F. C. NELLES	Superintendent
ELMER KNOX	Secretary
